gee, well, it seems that either you are talking about yourself (again), or
you are honestly afraid that someone (like me) is smarter than you thought.

in all honestly, simple methods of protection do work. spammers have a hard
time getting my e-mail because their scripts only filter for specific
munging styles (such as the "nospam" routine in ones e-mail). Note my
return e-mail above. it redirects back to localhost.

Now, your statement about spewing idiocy can very well be applied to you.
you are, of course, a troll. you are afraid that if you revealed your true
indentity, that someone would start nitpicking on you about your history.
What's the matter, afraid of a little criticism?

ah well. I think I have devoted quite enough bandwidth to you as it is....

Dave, oh humorless one, it is satire. Len is making a comedy of your
situation. I would place Len in the "satirist" category. Hi, hi.

Jim has recently expressed an interest in Mars. When do you think he
will become a Martian?

He works in an emergency room. He could be on just about anything.

> Poor nursie can't get it straight on who is the "DXpeditioner" and who
> isn't. His hatred causes him so much confusion.

Agenda + Hatred = Steve.

> >>> Or maybe you don't know.
> >>
> >>That too is incorrect.
> >>
> > I love seeing Brian the Brainless accusing others of "not know(ing)"...
> >
> Because YOU don't know much at all?

Amazing that Dave reports in here that he's worked Frenchmen on a particular 6M frequency, a frequency that the French aren't authorized. When I pointed it out at the time, I was wrong, and now it never happened. Hi, hi.

> Despite all your mighty "licensures" and pretty pieces of paper
> and all that military experience ("seven hostile actions" and
> shoebox citations)?

He's a legend in his own mind.

> >>> Or maybe you do know and you're just trying to
> >>> cover your rear end.
> >>
> >>Sorry, you're incorrect again.
> >
> > Of course he is...
> >
> Only to the PCTA Extra Double Standard.

It's all archived. His claim to the French ham, and corroboration of the French 6M authorization by a third party.

And now Steve's defense of working out of banders is part of the record.

Dodo's of a feather.

> > Lennie's taught him how to "cover (HIS) rear end" rather well.
> >
> I don't "teach" the obvious and the easy-to-understand, nursie.

Steve used to be a Marine...

> > First he's got his Somalia logs, but he's not going to tell anyone
> >anything.

> Then we had the official, anyone-can-read-them definitions of MARS
> as stated by the Department of Defense yet nursie said, "Sorry,
> Hans, MARS >>IS<< amateur radio!"

I gave Steve all of the information that he is entitled to:

He's not in my Somalia logs.

> > Then they are in his garage in storage.
> >
> > Then they are in a rental storage facility.
> >
> Then nursie still hasn't said where his "seven hostile actions" took
> place.

>
> Brian was THERE. Nursie wasn't.

Yep, and my logs are still in storage. They were only in my garage in
Steve's mind. He made an accusation which I corrected, but they're
still in my garage according to Steve. He certainly knows how to
built upon a lie.

Meanwhile, we hear so little about those seven hostile actions. More
lies?

> > He's gone around in so many circles with that one alone that he'd make

> kind of whiz-bang in vehicles.

NASCAR? I'll bet he likes a good dog fight after watching each race.

> > Then there's the assertions about how unlicensed comm devices "play a
> >major role in emergency comms".
>
> You got it WRONG again, idiot. Not a "major" role. A very useful
> one. Any communications medium is useful in REAL emergencies.

No, no, no! Only ham radio is useful in an emergency. ;^)

> What "major emergency" has nursie been IN? With "comms?" Of
> any kind? Were they used in your "seven hostile actions?"

Funny how the military uses the pyramid alert recall roster, and there
are cell phone numbers listed on those rosters. How da Heck does dat
happen???

Funny how on 9/11, NYPD officers trapped in the wreckage used a cell
phone to call for help. How da Heck does dat happen???

Steve and the guy that speaks for the Secretary of Defence says it
didn't happen. Can't happen. Won't happen again if they can hep it.

> I've been in two of those, using real communicaitons. Not using
> amateur equipment. Not seeing any amateurs "doing comms."

> I've done REAL HF communications as far back as a half century
> ago, did it for three years in a row. What is nursie's "emergency
> comms" experience or military communications? Restricted? To
> reading about it on the ARRL news?

Now, now. He probably talks to ambulance drivers on an insecure
frequency.

Steve, "What's yer 20, gudbuddie?"

Driver, "Huh? Whachew talkin bout?"

Steve, "Yer TWEN-Tee, Yer TWEN-Tee."

Driver, "Izzat Nurse Steve? Sumbody get that Idjit off mah radio.
Geez-Oh-Peet! If dat Idjit fiddle-fools wid mah radios one moah time
I'm gonna brake his fingers!"

Later the same day...

Head Nurse, "Steve, were you playing with the dispatch radios again?"

Steve, "NO! COULDN'T HAVE BEEN. I WAS PLAYING ON THE COMPUTER."

Head Nurse, "You know we've had this discussion before."

Steve, "LIAR, LIAR. We've never had this conversation before because
we're having it now. We had a different conversation then."

Head Nurse, "Steve, would you like a few days off? I could call the
VA..."

> > Still waiting for His Untruthfulness to ante up some examples of THAT !
>

>
> "You don't know the truth!" [Nicholson's famous line in the movie]

True enough in Steve's case. I don't think he could even recognize
the truth anymore.

> No problem. Us readers are still waiting for YOUR owning up to all
> those "hostile actions" and all that "emergency comms" you've done.
>
> So far, all us readers have seen are a bunch of YOUR vague claims

> >that hundreds of Hams would have been proud to pass along!
>
> Idjit nursie been looking in the mirror again... tsk.

Len, Dave and I we were talking about people having interests. Dave
asserts that since you have an interest in amateur radio, that you
-must- become a ham. I suggested that if such an interest must result
in one becoming a ham, that Jim's interest in Mars must culminate in
Jim becoming a Martian.

Steve needs to stay on topic. Maybe he's suffering from that thing
called Adult Attention Defecit Disorder? But since he's never going
to grow up, maybe it's just the juvenile variety.

> Brainless nursie can't state even one "hostile action" (other than
> his every day in here).

He's been telling untruth's again?

> Proud nursie doesn't know squat about military communications
> or military avionics enough to name anything he claims to have

>
> Excuses, excuses. Nursie's Putz be limp?
>
> Nursie have a telephone? Or did he throw it out in some fit of rage
> when he couldn't "call professionals and have Brian or myself
> committed?"

"Dialing..." was just another lie in a long, long string of lies.

> Nursie be trying to get me to commit an illegal act of "working" on
> the ham bands. Why nursie wanna be a conspirator to crime?

Sounds like David Heil. It's all OK if my side is legal. And Riley
lied when he said "Poor amateur practice is enforceable." Hi, hi.
These guys got every angle covered with either a lie or some twisted
justification.

> Nursie wanna "work" some of my references? Feel free. Just
> erect your Putz antenna and you can "work" anyone. [make sure
> your wifey don't have any knives in her hand, though, make you
> QRT in a hurry...]

I was wondering where Lorain went off to after she bobbedit. Couldn't
happen to a more deserving "gent."

> OK, just WHERE were those "hostile actions?"
>
> And, have you yet understood just who is the authoritating agency

> for MARS?

ARRL? FCC? Mickey Mouse Club?

> Everyone tune in tomorrow when da Yell-Yell machine will be at
> it again with vagarities, backing up DavidoftheForeignService and
> all the PCTAs.
>
> LHA / WMD

I'll "tune in." These guys are both a barrel of monkeys and a barrel
of laughs.

But Elitists, none-the-less. Hi, hi!

It was all nonsense, none of it including pervasive wifty notions
about Billy's Oval Office "moral leadership" had or has anything to do
with his executive branch governance responsibilities as descibed in
the Constitution. Which, you might note, was fathered by Thomas
Jefferson. Who fathered a helluva lot more items than just the
Constitution. Or you could get into FDR's passing in the hot tub when

he was with his sweetie in Georgia. While Eleanor was back home
beavering away on more social enginering "projects".

> >I remember Clinton saying his role model was JFK. Well, JFK was allegedly
> >involved with Marilyn Monroe, while WJC got Monica. Sigh.

There's nothing "alleged" about it, Norma Jean put her romps between
the sheets with JFK in writing. And she wasn't the only one of that
bunch JFK did, he was a shadow member of the Rat Pack. They all
"shared nicely".

> Eisenhower was rumored to have been romantically linked (to be polite
> about it) with a female sarge who drove his staff car...which would
> not only be adultery but also violate military protocol since officers
> aren't supposed to be romantically involved with enlisted personnel.

While Mamie was crocked out of gourd back on the home front . . I
think the tootsie you're citing was a lieutenant, some sort of
"attache". Ike and his "attache" didn't even bother using separate
tents during the North African campaign . . Or maybe he did bofum, his
attache and his driver.

Leave it to Steve to -still- not get it.

The correct quote should have been,

"I did not have sex with that woman, Miss Lewinskey."

Bill Clinton left no doubt that he was not referring to Hillary.

Duh!

Welp, I'm a has-been. Now I'm just a civilian working on things that
couldn't be nearly as important as the security of our nation. But I
am a dad, and that's important, too. I don't need to join the
CAP/MARS/ARC/Salvation Army to justify every breath I take.

In 2027, when I retire, I'll work on my high-speed Morse Code so I can
finally communicate with the Elitists of this hobby.

No kidding? He must be a national treasure or sumptin.

> JPL has been doing it for about 35 years now. Wonder why
> ARRL hasn't sent a team there to "confirm" it? Aren't amateurs
> the "real pioneers" like the league says?

Shhhh.

> No sweaty-dah on code speed, though.

Just a little clarification for our Yiddish friends. "No sweatty-dah"
is not Yiddish for anything. It is not even a swear word in any
language. Though it is Korean, it translates to exclamation that
something is easy work, causing "no sweating."

Or "low power." With
> those kinds of distances everyone can use all kinds of nifty
> computer-assisted techniques sending communications below
> the noise floor.

The only thing below their floor boards are crumbs.

> OOOPs! I said a no-no! CANNOT be done with nasty, evil
> computerized techniques! That violates the sacred honor and

> on me! :-)

There must be an appropriate Yiddish swear word for such an occassion!

> All hams MUST have manual morse, be tested on it, etc., so as
> to allow "hams in third-world countries to use simple ham gear
> to communicate." With Mars of course.

Of course, hams in third-world countries are usually called "King,
Ambasador, or Sheik."

> By golly, it just shows to go ya that JPL, those nasty academics

Pasternak's no idiot.

That would be like him publishing, "Sorry Hans, MARS >>>IS<<< Amateur
Radio," or stories of "real military experience" from someone who's
never worn a uniform.

Hi, hi.

Tsk. Try to get it straight who you are replying to. You started off
with YELL-YELL at Brian and now you are trying to Yell-Yell to me.

The FALSE charge of "pathological liar" was old, tired, and still
false years ago. But you keep on manufacturing such LYING
charges, adding personal insults...all because you just can't handle
discussion involving differing opinions.

What is this NEW falsity, the one about making "possible
contributions to amateur radio?" Your imagination is getting wilder
than ever. I'm not interested in doing that, never expressed it.

Nursie seems to not understand that working an entire career
in radio and electronics is exposure and then experience to a much
wider field of "radio" than is possible in amateurism.

>> >> People like you and Lennie.
>> >
>> >People DO like me and Len. We're very likable guys.

>> ...except to sociopaths and the PCTA.
>

> I think you meant "ESPECIALLY" sociopaths, especially since the
>two of you manifest the behaviour of such. (And yes, I DO have the
>training to recognize it...unlike yourselves.)

Tsk, tsk. Dr. Strangelove personna operating there?

There is NO demonstration of sociopathy or even psychotic
behavior to have differing opinions...or of shooting back en force
to those unbalanced, one-viewpoint-shall-rule idiots who add
personal insults and comments on penises at the end of their
ranting, raving and yelling. Those unbalanced, one-viewpoint
idiots DO demonstrate their sociopathy. It's all archived in
Google. :-)

> Neither of you are very likeable.

Poor nursie. Can't fathom why his personal opinions aren't
revered and worshipped, especially after he adds those gratuitous
personal insults in replies? :-)

>At least not to people who prefer honest, trustworthy companions.

...and those "companions" would all have the SAME viewpoints
as nursie? :-)

To misuse some French, that could be "companions le putz!" :-)

>Perhaps that's why the
>back-patting is between the two of you.

Poor baby. Getting too much return fire are you? Running out of
newsgroup ammo? Call the murine corpse for resupply.

Better yet, MAKE THAT "CALL" TO AUTHORITIES! Have Brian
and I "committed" just through a telephone call. Act on it.
Your immediate problem will be "over!" :-)

You said you could do that. You have the "licensure," don't you?

>> >> People can have differing opinions and not have to resort to the

>> Very much agreed.
>
> Of course you can't provide a reference to where I have lied.

"Too many to count!" :-)

The "committment call." "MARS >>IS<< amateur radio!"
"Seven hostile actions!"

Just three items, mentioned in many more than a single post of
nursie's.

> Now in YOUR respective cases...we have REAMS of stuff. No use
>rehashing all that, though. Neither one of you possess a redeemable
>character.

"Reams?" You printed out every message? Tsk. Weird.

>liberated gay pagan Chemical Corps officer who was drafted at age 8
>and wasn't allowed to resign his commission despite being illiterate
>(refering to mistruthfulness as "lieing" too often to count) and
>openly deviant...

Tsk, tsk, tsk. That individual left this newsgroup long ago.

You are STILL disturbed about his presence. Poor nursie. You
need some proper medical attention for all those "wounds." They
are still festering.

> He agreed with you too, Lennie. I know he'd be the first one I'd
>want on MY "side"...(uuuuuhhhhhhh...yeeeeeeeeah....RIGHT!)

You are very confused. You are replying to Brian, now you are
replying to me, and then you say you want Mark Morgan on
your side?

> Great company you keep.

Actually, it is. :-)

> So let's take a closer look at Lennie and Company since Lennie
>has been so anxious lately to belittle, as a group, those he considers
>unwashed masses...

Tsk. Can't understand simple euphemisms.

"Lie soap" is a play on words for "lye soap." Understand?

Those you do the YELL-YELL ought to have their minds washed
with "lie soap." :-)

> Openly contemptful of Amateur Radio in all forms despite
>professing "admiration" for it.

Incorrect. Openly "contemptful" of INDIVIDUALS in here who stuck
on their own personal viewpoints representing "all" of amateur radio.

>Accuses others of trying to abridge
>his "freedom of speech", yet filed no fewer than 14 "reply comments"
>to various NPRM's directly attacking each respondent.

Tsk, tsk, tsk. It is the nature of Comments to the FCC that those
in opposition to particular viewpoints do not cherish and applaud
the opposition! :-)

It's more than "14" by the way. You can see ALL of them at the
FCC ECFS.

> Has insisted that there are radio services specifically
>established for "recreational" communicaitons but won't provide the
>references.

Incorrect. FCC regulations in Parts 95 and 15 cover most of them.

BTW, it's "communications" not "communicaitons." Watch those
fingers when your anger flares up...just like "wilol" earlier. :-)

> Promised to get his "Extra Lite out of the box" but hasn't done
>that.

Not really.

> Insisted he was going to build a Part 15 legal transmitter on
>Amateur alocations yet hasn't done that.

Incorrect. That was showing that FCC regulations allow legal,
unlicensed RF radiation on MANY bands, amateur included.
Done that several times.

> Belittles others for using "diminutive" names addressing him,
>insists he doesn't do that and insists he is a
>"professional"...however the NG is rife with his own use of diminutive
>names for people who go out of thier way to be nice, even respectful,
>of him.

Aw, poor nursie. He went "out of thier way" to sign off so many
messages with "Putz?" [e before i except after drugs...]

I was a PROFESSIONAL soldier before nursie got born. Learned
how to shoot back effectively. Poor nursie can't take that. Awwww.

> Liberally analogizes others with the Nazi party.

Conservatively.

> Harrangues others he perceives as insulting his profesional
>"accomplishments", but also goes out of HIS way to insult others who
>do not similarly "insult" him.

Tsk, tsk, tsk. Nursie keeps using "alleged" this and that. He could,
to be correct, check up on that since I've given both job and personal
references in here.

But, nursie is hot and heavy on the "big lie" technique in psywar skills...figures if he can YELL-YELL enough he might get one soul to believe him! :-)

> Frequently calls others "potty mouth" while using blatant
>profanity.

The infamous nursie sign-off of "Putz" means penis in Yiddish.

"Blatant profanity" to nursie: Heck. Darn. Love. Flag. Duty.

All four-letter words. Like "code." :-)

> Has attempted, unsuccessfully, to link his rear-area radio
>station clerk duties with those of Soldiers who died in combat three
>years before he was even in the Armed Forces. That in itself makes
>him a contemptable pig in my not-so-humble opinion.

Nursie is anything but "humble!" :-)

Tsk. Nursie LIES again. I was never a "radio clerk." I was MOS 281.6 Microwave Radio Relay Operations and Maintenance Supervisor with brevet MOSs in Fixed Station Transmitters and Carrier Equipment.

"Rear area?" Of course. We didn't get a choice to take off on our own and go fight somebody. There was TDY, but that is another matter.

What of nursies famous claim of "seven hostile actions?" Where and when?

> Insists on making "diagnosis" of alleged mental health issues in
>others, yet refuses to present his credentials in ANY health care
>discipline.

Nursie acts NUTS in here. No problem to anyone to see that.

> And let's not forget his critiques of various volunteer
>organizations, yet Lennie has absolutely ZERO experience in ANY such
>organizations. Some criticisms going back to his childhood
>accusations of the ineptness of the Civil Defense programs...(OF
>course Lennie ALSO takes great liberties with criticism of ANY person
>who dares to comment on any thing that occured before THEY reached
>puberty...but it's OK for LENNIE to do! ! !)

There we have it. NOBODY can disagree with anything unless nursie "approves" it! :-)

> There's lot's more for Lennie, but let's move on...
>
> There's Brian P. Burke. Lennie's padawan learner. Insists that
>he himself has operated from several exotic DX locations, but when
>asked to provide some validation of his claims insists his logs are
>stored...He's not really sure since on several different occassions
>he's insisted the logs were in one location or another.

So...where's all the "evidence" of nursie's military service?

Still "in his wallet?" :-)

> What IS certain is that he's never operated Amateur Radio from
>Somalia.

Nursie doesn't know that.

Where and when did nursie have those "hostile actions?"

> Brian has also gone out on a limb by expressing "admiration" for
>Lennie Anderson. Forget that Lennie has already been thoroughly
>documented as untruthful, and pathologically so. One would have to
>wonder about Brian's character from that one faux pas alone.

Poor nursie. Terrible festering hatred for certain others. Pity that.

> Then he goes on to insist that "unlicensed devices play a major
>role in emergency comms". Of course when pressed to provide some
>example of his assertion, he redirects to the use of diminutives and
>profanities. Wonder where he got THAT from. Probably his one short
>stint with an AFMARS Base Support Team 10 years ago...Guess they used
>a pair of old LaFayette CB channel 14 walkie-talkies for "support..."

Tsk. Nursie festering away again. Can't win a single argument
so he resorts to the personal insult ploy. Again.

> There's more, but before I forget to add him in, let's not forget
>another alleged "elecrtrical engineer", Vipul Shah. Ahhhhh,
>yes...Vippy. Posted for several months anonymously, himself making
>absurd suggestions of improprieties without any validation. That's
>when I "outted" him. Of course when I suggested that we contact some
>of the local Amateur Radio clubs to get THIER version of Vipul's
>allegations, Vippy then insists that they were clubs "not near my
>home".

MORE hatred for long-past thread individuals! Tsk, tsk.

> It got even more absurd when Vippy announced he was "leaving
>engineering" since his family thought he was in a dishonorable
>profession...Granted that thgere are those like Leonard Anderson who
>BRING some dishonor to the good name of professional engineering, but
>the assertion itself was, on the face of it, pretty stupid.

Tsk. "Stupid." Doesn't fit with nursie's fantasies!

> Vippy them moved on to a new job that he was not allowed to
>discuss, however he did volunteer that his new "employer" told him it
>would probably put him in a "compromising" position with fellow
>employees.

Right. Like nursie had all that "experience" in electronic engineering
from being a purchasing agent for a set-top-box maker for less than
half a year! His ONLY "professional" electronics experience. :-)

> Yeah, Lennie...That's some great company YOU keep...Mark Morgan,
>Brian Burke, Vipul Shah...And Let's not forget Grumwich, MegHz and
>other "anonymous" posters that seem to pop up when YOU "take a
>break"....

Tsk. None of your "opponents" can take a "break?" :-)

Gunnery NURSE has shouted out the Order of the Day!

NO opponents get ANY breaks! All be here 24/7 to receive regular
chewing outs from the Dill Sergeant!!!

["chewings out?"]

Hup, too, tree, foah! March, march to nursie's drumbeat!

Jody calls now have the ring of paranoia. Poor nursie thinks all those
anonymous posters are "me" or "Brian." Nursie need some mental
therapy (not to mention "lie soap") to get close to normal behavior.

Make that "commit call," nursie. With any luck the "authorities" will
pick YOU up instead and you will GET that mental therapy! :-)

So...THIS is what some think is "amateur radio?" Hi, hi.

Tsk, tsk. Nursie ought to go back through Google a month or so ago and find out it is a relatively new mention. Of course, nursie didn't catch it back then but is now reminded. :-)

By the way, Brian reminded me of the correct wording. That proves Brian and I are quite independent in thinking. He got no advance warning that I laid in a little booby trap to try and catch you, booby. Didn't work then. Difficult to trap dumb animals...

> Woe-be for Lennie to actually research something he posted
>here...Cut-and-paste makes him a bit too lazy.

Tsk, tsk, tsk. Would nursie-booby care to go around again on "Sorry, Hans, MARS >>IS<< amateur radio?"

Do you need repeat postings of the DoD directive on MARS? The USA, USAF, USN-USMC directives on MARS?

Apparently you do. You didn't "get" it the first go-around and insist you wrote nothing wrong. Obviously, by everyone else involved, you were wrong...but can never, ever admit it.

It was? One reach for an Almanac, thumbing through an index, going
to the basic planetary facts page could have told Rev. Jim the correct
distances. No amateur license needed for that, not even "licensure"
in the library sciences! :-)

>> A bit short that. According to my Almanac ("World Almanac and
>> Book of Facts 2001" published by World Almanac Books, p. 587),
>> the minimum to maximum distances of Earth to Mars are 34 to
>> 249 Million miles. At 186,000 Miles per second, the ONE-WAY

>
> http://www.absoluteastronomy.com/planets/mars.htm

Thanks for the link!

It might be on the NASA website somewhere. I always get waylaid
there by so many other interesting items of information that it is
hard to stay on track of finding my original question. :-)

>> A single two-way contact, one transmission at each end, would
>> take 6 to 44 minutes to complete, depending on the planetary

>> positions. The limiting factor on "rag chews" would be limited by
>> rotation of both planets. :-)
>
>...and those periods when that pesky moon of ours is in the path :)

That too...but the eclipsing due to Luna's position is rather short,
relatively speaking.

Eclipsing due to the sun is longer in duration.

One can also figure in the Doppler shift due to planetary motion
and thus introduce another nice "correct-incorrect" manufactured
flame war...

>> Of course, Rev. Jim, you WILL call MY calculations "incorrect"
>> or "wrong" or something like that, won't you? :-)
>
>Careful - you're contradicting an expert here - ain't never been wrong
>yet! 8*p

I know! :-)

Rev. Jim could say "I'm 'incorrect'" by not using 186,200 miles per
second instead of using 186,000 MPS as I did. :-) That would
make the two-way time shorter by 0.11 percent. Terrible error!
Oh! Sound the alarms, issue the hue and cry! Error! Error!

ROTFLMAO!!!!!

Okay, we'll just have to see what all the "errors" are that he comes
up with...like it makes a lot of difference on something that hasn't
happened yet...nor is it likely to...certainly NOT by manual morse
code! :-)

About 39 years ago I made a super-accurate sidereal drive driver
for a friend's home-built telescope (also a ham). Used a quartz
crystal timebase and RTL logic packages from Fairchild. 3 years
ago I watched through nephew David's store-bought scope with
built-in super-accurate sidereal drive on his porch in Minnesota.
Compact scope, drive was battery or AC line, included a little
electronic guide and auto-pointer to major celestial objects. Time
marches on.

I would expect that, by the "centennial" of that "prize," a bunch of
hams will be busy setting up 80m directional wire antennas
pointing vaguely UP and trying to "work" Mars. With "CW." :-)
...even if there were still no humans on Mars...then...

LHA / WMD

Still waiting for the path loss calculations and necessary antenna
gains to avoid "violating Martian amateur radio regulations!" :-)

>
>> "You don't know the truth!" [Nicholson's famous line in the movie]
>
>Just for the record, the line was "You can't handle the truth!"

Of course. :-)

A month ago I misquoted that line from "A Few Good Men" and Brian corrected me. :-) I had expected another would become unglued at that line spoken by the USMC full bird but that didn't happen. :-)

That "other" just realized it, apparently and commented this Sunday.

Even Phil Kane wants to get into movie critiques, such as with the classic American version of the Japanese original, "The Magnificent Seven." He claimed, at least twice, that the film had a "flaw" in showing telegraph poles in a background. The period was post-U.S.-civil war and the wired telegraph was in operation prior to the U.S. civil war. [I have the DVD and can review any scene in that movie on my computer...:-)]

Movies have influenced the minds and thinking of many, so much so that many can't distinguish between cinema fantasy and reality. A case in point is that terrible plot (but terrific SFX) "Independence Day" where brainy Americans defeat aliens via (drum roll) morse code! Stupid, stupid idea for a plot point, but lots and lots of otherwise sane hammes thought it was "real!" :-)

The Religion of morse code is very strong in some. In those some it overrides rationality, the ability to think logically. Their need to triumph over others through that archaic skill (since 1844) is so strong that they forgo any societal niceties and engage in a battle of words to the death about it! Dumb. Waste of effort.

When I use the satiric "Church of St. Hiram" phrase, it has a ring of truth to it. The Believers in that "church" can't see it, but it is there plain and large, written in neon and Day-Glo.

Beep, beep.

That "drift" is off by several orders of magnitude, Rev. Jim.

But, if you don't have the guts to address the SUBJECT of code
testing versus no code testing, then you can retreat to quieter waters
where you can assume guruism on presidential politics.

After all, you ARE "licensured" for politics, aren't you?

Of course you are! [you will remind us later, naturally, after showing all
(of opposite opinions) how "wrong" they are...]

Don't feel bad, Mike. If you don't have the guts to jump into that
one-sided firefight, you don't. You stay on the ice where it's cool
and you can hit folks with your stick or get the puck off.

Does that Nobel-equivalent amateur radio license test passing give
you "credentials" or "licensure" to be a political guru? I think not.

The political biasing on presidential politics can be likened to the
morse code test/no-test debate. With an important difference:
The PCTA Believe in the divine sanctity of the test retention, that
all "good" hammes go to heaven if they can do morse.

NCTA are of independent thought, capable of seeing beyond the
territorial imperative of the morsemen and the religious obsession
of retention of the status quo.

But, in U.S. hamme raddio, there is a ONE-party system. That of
the ARRL, the BoD, and the Church of St. Hiram triumphant. All
must Believe in that one party, no independent thought allowed.
[kill the heretics against the Church of St. Hiram!]

Baaaaaaaa. Sheep.

Bull. Pure bull. Took no guts at all.

He *knew* that he'd be convicted in an impeachment. *His own party* told him
they could not support him, and that he was going down based on the evidence
alone.

So he resigned - and was then pardoned by Jerry Ford, who replaced him.

Do you *really* think there was no deal struck, exchanging the pardon for the
resignation?
>
>He was also the last president to have a balanced budget and opened the

Bill's full name is "William Jefferson Clinton"

>Who fathered a helluva lot more items than just the
>Constitution.

Recently proved by DNA testing.

There are actually two organized groups of people who claim to be descended from TJ. One group has detailed genealogies, the other oral stories handed down for generations that the first group did not accept - until DNA testing showed that the oral stories were true!

Welp, you're right in the time of the "centennial" of that "famous"
Earth-Mars ham QSO!

Who knows...maybe you can win it? Provided there are "ham-
astronauts" who are there, of course. Stay tuned to the ARRL
News opening page for all those "ham-astronauts" and how
ham radio inspired all of them to become astronauts! :-)

>> >> Contests working Earth-Mars contacts should be interesting, when

>> boss around radio!
>>
>> LHA / WMD
>
>Pasternak's no idiot.

Ahem. Don't start up with Dieter on that... :-)

>That would be like him publishing, "Sorry Hans, MARS >>>IS<<< Amateur
>Radio," or stories of "real military experience" from someone who's
>never worn a uniform.

Is that anything like "shooting bears for naval intelligence?"

Or the choo-choo chaplain "explaining" all about Soviet airpower
to me (after reading all about it in Jane's)? :-)

Or how about (many years ago in here), the "reserve Army colonel"
explaining how his "son" told him all about "using CW behind enemy
lines in Iraq" [during first Gulf War] to send intel back? I love that
one. Thoroughly "researched" and "accurate." :-)

This newsgrope is like a barrel of monkeys...lotsa fun and
hilarity from all the PCTA.

By DavidoftheForeignService's logic, that would be correct.

Logically and in reality it would not. That's far apart, by several
AU (Astonomical Units).

>Steve needs to stay on topic. Maybe he's suffering from that thing
>called Adult Attention Defecit Disorder? But since he's never going

>to grow up, maybe it's just the juvenile variety.

I'm betting on Post-Traumatic Stress Disorder. You know, from
one of those "hostile actions." :-)

Or maybe he saw "Peter Pan" too many times and identified with
Peter.

>> Brainless nursie can't state even one "hostile action" (other than
>> his every day in here).
>
>He's been telling untruth's again?

Nah! "Never!" "Point to one post where he ever told a lie!" :-)

Sheesh.

Nah - I'm pretty sure he claims to have had a successful career in
electrical engineering - a field where, I suppose, being off by over
100% in a calculation would be completely acceptable (so THAT'S what
fuses are for!). 8*p

That, and being employed full time in amateur radio, and currrently
working on his WAU (Worked All Usenet).

Not a matter of guts, Len. I stay out of it because its all old and
gone circular. If you guys are enjoying yourselves - have at it! At
least you all are accomplishing something, eh? 8^)

I do keep reading them for your header quips though! 8^)

What siutation?

I dare say Dave Heil is in far better "sitaution" than Lennie. He's well
known, respected, and he does what he says he's going to do.

Unlike Lennie.

>I would place Len in the "satirist" category.

That's "satanist", Brian.

> Hi, hi.

There's nothing funny here, Brain...save perhaps for your lack of
understanding of how you and Lennie are perceived by truly trustworthy people.

> And *in their opinions*, they're right!

It's weird for sure, but I think it is a result of what some people
have tried to do to adolescents regarding their sexuality. Using AIDS
fear as a lever, some people have tried abstinance programs as a cure
all for STD's, and golly gawrsh, it just happens to fit into their
morality view. What they are trying to do is distinctly unnatural.
Humans reach sexual maturity at one age, and we are trying to enforce
celibacy until they reach their late 20's early 30's, when they are
supposed to marry and have kids. So celibacy is supposed to take 20 of
the most fertile years of your life and you aren't supposed to do
anything. Stupid, stupid, stupid.

My school was amazingly repressive, and this was in the early 70's. Sex education wasn't. Boys separated from the girls, and consisted of going over venereal diseases. A prayer, presumably voluntary. No evolution in science class. The fundies had wiped the slate clean - no dinosaurs, no ancient earth at all. Even sanitized geology! Nothing to pollute the minds of the impressionable youngsters. After getting out of high school, I read the forbidden stuff on evolution and geology and age of the earth. Such innocent stuff to be so dangerous.

Hard to say, Kim. Some people for whatever reason look at a pledge as
swearing on something. And many God fearing people don't want to swear
to "under God". Personally, I'm of your opinion, doesn't bother me
either way.

I think that at the time of the lawsuit, something like 30% of US public
schools had school prayers...

>Today, I
>support having XXX seconds of silence (where X = however many that anyone
>would like);

Silence is a prayer in some religions ;-)

>but I don't support prayer in school, or any religious
>activities in school.

The big question is "what constitutes those things?" It's one thing to make
every kid recite the Lord's Prayer as part of the school day - that's clearly a
religious activity. But what about having an after-hours holiday pageant with
Christmas and Hanukkah songs?

>I also don't support--never will--and form of "Faith
>Based Initiatives" sponsored by any political body--Executive,
>Administrative, Judicial, or otherwise.

Understood.

What's petty to some is not petty to others. To more than a few folks, "under God" is simply a form of prayer in the schools.

Heck, to a lot of folks, arguing that there should not be a code test for a ham license is "petty".

>> - The *correct* way to dispose of a US Flag is to burn it.

>Yeah, interesting irony, eh?

Of course the burning must be correct and respectful - but who decides what that means?

>don't become tools of political influence.

Well, I have more respect for someone who lives a clean, moral life than someone who doesn't. But that's not the point at all.

What I was trying to say is that if we're going to condemn Willy for being a hornydog who couldn't keep his hands (and other things) to himself, and who couldn't keep the promises he made to his bride, then we should use the same standards to judge other politicians. Like Newt.

>> Kinda dumb on Monica's part, don't ya think?

There's plenty to go around!

But I say the biggest dummy in the pile was WJC himself. Because he *knew* that fooling around could easily go public, and would have enormous negative repercussions. This was obvious from what happened to Gary "Monkey Business" Hart (remember him?). Hart did a lot of good things in the various offices he held, and might have made a good President or VP. But his indiscretions pushed all that aside and destroyed any chance for him. Anybody with *any* sense would know that the chances of keeping such stuff secret were slim to none.

> boys.

Come on JJ. Where do you get that out of what I posted? Yours is a typical reactionary response on the subject, and really isn't even related to the sex education/no sex education thing. Your talking about a 15 y.o being a slut.

Reminds me of an incident around the time I graduated. Noted how I received essentially no sex education in school. Well, the times were changing, and a new book was introduced, in which the students could see that a woman's metabolism changed over the course of the month. Oh-oh! Of course an astute teenager could figure out the rhythm method of birth control. Interestingly even then we knew the old joke
Q. "What do you call people that use rhythm birth control A. Parents!

So there is the background. Some outraged parents show up at a school board meeting that some other students and I were there for a different reason.

When it is their turn to speak, Outraged Parents spokesman whips out the latest issue of Penthouse, opens it to the centerfold, and screams "This is what they are teaching our Kids in school today"!

Yeah, smooth move eh?

Now if you really want to know, I would talk with my 15 year old daughter to tell here that she's a lot better off waiting to have sex, as one little mistake could mess her life up badly. All the details, all

the mechanics are not going to keep her from "doing it". And neither can I, all I can do is try to deliver it in a manner that makes sense to her. "It's evil, its immoral and sinful" is as likely to entice a youngster into doing it as keeping them from doing it.

People make mistakes, people engage in stupid and illegal things.
People engage in sex outside the sanctity of marriage.

And we are more concerned about these things that we are about whether
or not they can actually do the job or not.

We get what we deserve. THere are probably a lot of people who could be
a great President that can't or won't because of irrelevant personal
history.

Nursie be a new species of simian...the "Chumpansy."

None of us readers can really trust nursie. He make wrong statements about MARS, makes big brag claims of "hostile actions" but never specifies Where or When they were, signs off messages with the Yiddish colloquial word for penis. Just to name three.

I've forgotten how many personal insults you've tossed (all of them false, misleading, and outright LIES) in lieu of replies on the subjects.

Nursie really doesn't have any social communications skills worth noting.

Now try, try really hard, to get close to the SUBJECTS in these threads instead of endlessly making with personal insults.

Get some mental therapy. Some doctors must be around in TN
that will try to cure emotional basket cases. They can help you.

What has DavidoftheForeignService DONE? Other than get a
retirement check from the U.S. government? [aka "the fleecing
of America" as NBC news puts it]

DavidoftheForeignService doesn't design or make microphones.
That's another Heil.

Nursie hasn't spent a working career in engineering. I have since
1960...nearly all of that time in design engineering.

What has nursie DONE in radio that is even close? Shout, holler,
rant, rave, and do the Yell-Yell at anyone disagreeing with his
self-righteous, biased viewpoints? Nursie be mighty loud in THAT.

> Unlike Lennie.
>
>>I would place Len in the "satirist" category.

> That's "satanist", Brian.

666...or, in nursie's case, "sick sick sick."

>> Hi, hi.
>
> There's nothing funny here, Brain...save perhaps for your lack of
>understanding of how you and Lennie are perceived by truly trustworthy
>people.

Nursie does NOT know any "truly trustworthy people," how can he possibly judge?

One thing us readers know is that nursie is a documented, DNA-spoiled LIAR as well as personal insulter, an emotional basket case who cannot ever see more than his own self-righteous opinion on any subject. Tsk.

Nursie just can't take heat. He should get out of the newsgroup kitchen and go play Dill Sergeant someplace else. [Al Ghraib prison comes to mind...the one where the MPs like to take photos of naked prisoners...]

There's a constant stream of nursie invective pouring from his poison 'puter on every message thread. All because he can't take ANY controversy. That's sick...for so long.

Get some mental therapy, nursie. You need it. Your family needs it. We need it. Say so long.

>least you all are accomplishing something, eh? 8^)

No, Mike. You've gone over to the dark side of the force. You've kept
silent
on the insulting behavior of these U.S. radio amateur "extras" and then
tried to encourage turning this newsgroup into a private little Chat Room.

If you need private little Chat Rooms so bad, contact your ISP. They
can arrange for you and cronies to have one for your very own. Really!

> I do keep reading them for your header quips though! 8^)

I don't make "header quips." The headers I cannot change; AOL does
not allow such hacking.

Folks in here don't even understand Taglines...a formerly venerable
custom of funny nonsense phrases and sentences that have nothing

(usually) to do with the message body.

This is a humorless place. What passes for humor among the PCTA
is a lot of hollow personal insults and self-righteous giggling and
harassment of those trying to argue SUBJECTS, not people.

>> Does that Nobel-equivalent amateur radio license test passing give
>> you "credentials" or "licensure" to be a political guru? I think not.
>
> I'm a citizen, and I vote. That's good enough for me.

Of which country? As an American I used to think other Americans
would respect free speech. NOT in amateur radio of the USA.

Check out Kernel Klink's comments: Anyone who is "interested" in
radio MUST get a ham license! Like an entire engineering career IN
radio-electronics is "NOT" showing an interest?!?!?

Some poor, disadvantaged, non-electronics employed emotional
basket cases in here are jealous that I began in radio at the TOP of
HF communications. Poor babies. Nearly all of them didn't even
exist when I started. They've got the brainwashing to insist that
morse code is still used in communications (it isn't outside of ham
radio) or that MARS >>IS<< amateur radio! [among several myths]

Those emotional basket cases, self-righteous to a fault, are trying
their best (which is also their worst) at insulting anyone who isn't
PCTA. They can't handle controversy, can't handle anything which
hasn't been spelled out for them by the ARRL. Tsk, tsk.

I'm putting you down on the PCTA self-righteousness group...on
the basis of your subject postings. Have fun! :-)

Yep. Like Nixon and the whole Watergate mess. He resigned 30 years ago this
month - I still remember where I was when I heard that speech..

>People engage in sex outside the sanctity of marriage.

They've been doing that for a long long time...
>
>And we are more concerned about these things that we are about whether
>or not they can actually do the job or not.

Some people are, anyway.

One thing Watergate changed was that the media would no longer turn a blind eye to politicians' personal lives. Remember that politician who turned up drunk in the reflecting pool with someone named Fannie Fox? A few years earlier, and it would never have made the news.

>We get what we deserve. THere are probably a lot of people who could be
>a great President that can't or won't because of irrelevant personal
>history.

Possibly. Heck, one of the reasons Ronald Reagan didn't get nominated until 1980 was because he'd been divorced. That used to be political suicide. Now, nobody seems to care.

Or consider Slick Willy hisself. I think the main reason he got the nomination back in 1992 was that a lot of the big guns on the Dem side (Sam Nunn, Mario Cuomo) saw Papa Bush's popularity after Gulf War 1 and figured that running against him was futile. So they gave it to Bill. Then the economy tanked for a spell, Ross Perot split the opposition vote, and Clinton gets in on 40% of the popular vote but a big majority of electoral votes.

--

Here's another item for ya:

One of this election's issues is stem cell research. The Dems are for it, the Pubs against it. Ron Reagan spoke at the *Dems* convention to support it (he was not invited to speak at the Pubs' convetion at all, despite the tie-ins with his dad's recent passing).

Now, the reason the Pubs are against stem cell research is because of the abortion issue/killing embryos. Which is consistent in a way. But note this: IVF (in-vitro fertilization) involves exactly the same issue. If someone is against stem cell research because of the abortion issue, then logic dictates they must also oppose IVF for exactly the same reason.

Mike:

Try this:

Get out a Bible and read the first book of Genesis. Not a book of Bible stories
- get a Bible. Note that there are *two* creation stories - and they cannot
both be literally true, because they contradict each other on several points.
Most books of Bible stories blend the two storiesand edit out the obvious
contradictions.

I think Genesis is written that way as a signal from the Author to the reader
that the Book is not meant to be taken literally, but to be looked at as
explanations of Why and By Whom, not How and When. But that distinction is too
often lost on people.

>supposed to marry and have kids. So celibacy is supposed to take 20 of
>the most fertile years of your life and you aren't supposed to do
>anything. Stupid, stupid, stupid.

Fun facts:

- Research shows that the *average* age of puberty has been dropping over the
past several generations, particularly in girls. Yet the age of first marriage
has been rising even faster. Go back to the time of "Little Women" (War Between
the States era) and the delay between puberty and typical first marriage was
only a few years (even for Yankees). Today it's a lot more - and for folks
looking to go to college and grad school and start a career, even longer. So of
course the reality becomes that there's an official message (abstinence) and
what actually goes on in people's lives (something quite different from
abstinece).

- The whole abstinece thing is a relatively new invention. Research shows that
about 1/3 of Colonial-era brides were expecting on their wedding day.

Ahhhhhhhhh....so unless Mike takes a side, he's somehow
"approving" of one side's argument or the other...depending on who
makes the claim first.

Personally, I think he's a very sober realist who is able to see
both sides of the exchange w/o getting incolved in all the muck.

Ans what passes for "humor" from the non-licensed,
non-participatory sidelines is antagonism, hatred, verbal filth,
mistruths and outright lies.

And you wonder why so many are "anti" you, Lennie.

You just refuse to accept that you're a fould mouthed bigot that
manages to tick off everyone you talk to.

It's not about differing opinions. It's about YOU being a putz.
No one likes being treated rudely and you are the epitome of rude.

We respect free speech, Lennie.

We DON'T "respect" people who use it as a crutch to be mean and
crude.

Witness:

> Check out Kernel Klink's comments:

Being smartmouthed is supposed to earn you respect?

> Anyone who is "interested" in
> radio MUST get a ham license! Like an entire engineering career IN
> radio-electronics is "NOT" showing an interest?!?!?

Just like Janet Jackson said..."What have you done for me
lately?"

Your "interest" in Amateur Radio is being antgonistic and foul.

It has nothing to do with furthering ANY aspect of the radio
service, technical, operational or educationally.

Ergo..."NO INTEREST".

> Some poor, disadvantaged, non-electronics employed emotional
> basket cases in here are jealous that I began in radio at the TOP of
> HF communications.

A rear area Army radio station clerk was "the TOP"...?!?!

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! !
! !

You were nothing more than a "radio mechanic", Lennie!

> Poor babies. Nearly all of them didn't even
> exist when I started.

And as of today you STILL haven't started in Amateur Radio, and
many of us have already been at THAT for over 30 years.

> They've got the brainwashing to insist that
> morse code is still used in communications (it isn't outside of ham
> radio) or that MARS >>IS<< amateur radio! [among several myths]

It doesn't matter WHERE Morse Code is used OUTSIDE of Amateur
Radio.

Read this veeeeeeeeeeeeery s l o w l y, Lennie...

This forum is about A M A T E U R R A D I O.

Not 1950's era Army...Not PLMRS...Not NASA or anyone else. Not
maritime nor commercial broadcasting...Not CB...A M A T E U R R A D
I O....

>>WE<< know Morse Code is not used except in very rare instances
outside of the Amateur service. That's because the Amateur service
has completly different goals and applications.

> Those emotional basket cases, self-righteous to a fault, are trying
> their best (which is also their worst) at insulting anyone who isn't
> PCTA. They can't handle controversy, can't handle anything which
> hasn't been spelled out for them by the ARRL. Tsk, tsk.

There's no controversy here, Lennie.

Morse Code continues to have valid aplications in the Amateur
Radio service.

> I'm putting you down on the PCTA self-righteousness group...on
> the basis of your subject postings. Have fun!

You're only doing that since Mike's treated you kindly and with
respect, and you just can't stand it.

I, on the otherhand, realize what a dedicated scumbag you are,
and treat you as such. You've gone out of yuor way to earn it...you
deserve it...enjoy it...

Putz.

While writing a monthly weather review for a forward location in the
ROK, I manage to work the following phrase into my report.

"The visibility was up and down like a new bride's pajamas."

So, either no one was reading the reports, or they were somewhat
amused and let it go.

"He" doesn't do the posting. It's distributed to an address book.

>He won't come out - because he knows that I'm correct.

"He won't come out" for reasons OTHER than "know(ing) that (you're)
correct"...

He doesn't "come out" because he won't lend any recognition to your
rantings, Dieter.

If you WERE correct, you'd just go right ahead and publish the information
or turn over your "evidence" to the proper authorities.

Your SOLE purpose in pursuing Bill Pasternak is to get into a peeing
contest over issues that no one except you deems valid enough to discuss in ANY
forum.

>You will find that
>I'm
>not the only person who has this opinion of him and his finances (but I may
>be
>the only one who has voiced it).

You are making this up as you go, Dieter. You have no "facts" upon which
to justify your allegations.

If you have some "facts", publish them here and impress us with just how
dilligent and "correct" you are in this matter. Otherwise, you're just ranting
and raving.

I lean towards raving.

If no one else is voicing it, how do you know there are others who hold
your view? From the response to your diatribes here, most think the
matter is a non-issue. You can rage at the Sun; you can curse the moon.
Both are still here.

So, in a time of constant terror alerts, record deficit, soldiers dying just about every day for no real purpose, a crippled economy with the middle class being crushed the reason you want to vote for the idiot is because of the gay marriage issue??? How about all of the family units that lost there homes and livelihoods? Are you really this ignorant? I'll ask you as well, what good did Bush really do for this country and back up your answers.

> seconds at closest approach to 688 seconds maximum.

Well, it's not correct. The 188 seconds is pretty close but the 688 is
way off because I added the Earth orbit radius rather than diameter.

Here's a more exact calculation:

Per NASA website, the Earth's orbit varies from 149.5 to 149.7 million
kilometres and Mars' orbit varies from 204.52 to 246.28 million
kilometres.

The closest the two planets approach is 204.52 - 149.7 = 54.82 million
kilometres
The farthest apart they get is 246.28 + 149.7 = 395.98 million
kilometres

Using 0.3 million km/sec (that's 300,000,000 metres/sec) as the speed
of light, we get:

54.82 / 0.3 = 183 sec (3 minutes 3 seconds)

395.98 / 0.3 = 1320 sec (22 minutes 0 seconds)

give or take......

> But you can count on contest ops to figure a way to make that work. Use the
> transmission time as a 'buffer' of sorts. Not a problem.

Ingenious use of the delay interval would permit pretty good contest
rates. Of course the ability to work duplex would be a plus.

For rag chewing, contacts between fixed nonpolar stations on each
planet up to about 12 hours long are possible if the locations are
just right at both ends.

> SO2R is just the beginning.

Of course the reason no one - professional or amateur - has been awarded the Elser-Mathes Cup is because it requires operators at both ends of the QSO. Human space programs won't be in a position to do that for decades yet.

Perhaps the goal is to get *you* to behave in a similar manner, Steve.

Freedom of speech doesn't mean people have to listen to someone,
comment on their rantings or take them seriously. Or behave in the
same manner.

Think about it.

It's so nice that nursie's personalities can all share in enjoyment.

How many are there now? A dozen? 13? 15?

Do some of them carry signs when protesting? Display their "wees"? Wear full white sheet uniforms a la KKK?

No, I'll take that back. You are very busy trying to excuse yourself from
any "conflict" in here, trying to run down the very middle of the road.

In a way, that is a form of self-righteousness...that of being so
"important"
that you won't Get Involved in any conflicts (you are "above" that). It
also
means that you don't care for anyone else, especially newcomers, since
newcomers will be the most affected by any morse code test. You can
think nobly and loftily because YOU made it and can then sit back and
laugh at all the disputes. You've got yours and to heck with all the
others.

? Poor nursie not getting enough lately? Always thinking of genitals?

That's not "respectful" is it?

> Your "interest" in Amateur Radio is being antgonistic and foul.

Tsk. I thought it was to remove the fantasyland aspect of some
hamateurs who think they are God's gift to radio. :-)

> It has nothing to do with furthering ANY aspect of the radio
>service, technical, operational or educationally.

Tsk. And the rant goes on to the CQ beat...

> Ergo..."NO INTEREST".

We can bank on that? :-)

Did Alan Greenspan authorize "no interest?"

>> Some poor, disadvantaged, non-electronics employed emotional
>> basket cases in here are jealous that I began in radio at the TOP of
>> HF communications.
>
> A rear area Army radio station clerk was "the TOP"...?!?!
>
> You were nothing more than a "radio mechanic", Lennie!

Tsk. Nursie wasn't there, doesn't know...but, he would be too
confused over the immensity of the HF communications station:
separate receiver and transmitter sites 20 miles apart, 43
HF transmitters with a minimum of 1 KW RF power output,
transmitter site antennas laid out over a square mile of land,
multichannel VHF, UHF, and microwave radio relay linking all
sites, the torn-tape TTY relay operations occupied one floor of
a converted warehouse with 220 TTY machines, 24/7 operation
to Seoul, Pusan, Okinawa, Manila, Saigon, Honolulu, Seattle,
Anchorage, San Francisco, all serving the Headquarters, Far
East Command. That station was only the third-largest in the
Army Command-Administrative Network.

I got assigned there as a microwave radio relay operator-
maintainer (my school MOS). The microwave equipment would

not be available for a year and a half to I was taught (a one-day informal on-the-job "class") how to operate the transmitters and did that...plus keeping the carrier and VHF-UHF radio relay equipment operating. Eventually, after doing a good job, I got promoted and became a team supervisor with SSgt stripes and responsibility that goes with that. 1953 to 1956.

>> Poor babies. Nearly all of them didn't even
>> exist when I started.
>
> And as of today you STILL haven't started in Amateur Radio, and
>many of us have already been at THAT for over 30 years.

Tsk. I became a professional in radio-electronics in 1956. Been in southern California aerospace industry ever since. IEEE member and sole inventor of one radio patent (3,848,191).

So...you've never gotten beyond the amateur stage? Tsk.

>> They've got the brainwashing to insist that
>> morse code is still used in communications (it isn't outside of ham
>> radio) or that MARS >>IS<< amateur radio! [among several myths]
>
> It doesn't matter WHERE Morse Code is used OUTSIDE of Amateur
>Radio.

True...because it is NOT...except to a few third-world merchantmen who haven't upgraded yet.

Aviation Radio Service doesn't use morse. Public Safety Radio Service doesn't use morse. Broadcasting never did. Private Land Mobile Radio Service doesn't use morse code. The U.S. military hasn't used morse code for communications in over two decades. Maritime Radio Service worldwide has abandoned morse code for international distress and safety, switching over to GMDSS years ago.

> Read this veeeeeeeeeeeeery s l o w l y, Lennie...

Why? Have you said anything "respectful" or important yet?

I don't think so.

> This forum is about A M A T E U R R A D I O.

Then why all the shouting and hollering about Presidential Politics in here? That has NOTHING to do with amateur radio. Zip. Nada.

> Not 1950's era Army...Not PLMRS...Not NASA or anyone else. Not
>maritime nor commercial broadcasting...Not CB...A M A T E U R R A D
>I O....

Then you should discuss A M A T E U R R A D I O, not emergency medical services, CAP, the USMC and your imaginary claims such as "MARS >>IS<< amateur radio!" or the unspecified bragging of

"seven hostile actions" or the gunnery nurse getting his rocks off by
insulting those who don't agree with him...

Tell that to Coslo, Rev. Jim, DavidoftheForeignService, and the
Katapult King Kellie.

> >>WE<< know Morse Code is not used except in very rare instances
>outside of the Amateur service.

So very rare outside of amateur radio that ANY use is destined for
banner headlines in the morsemen news! :-)

Even so, morse code on-off keying mode is a distant SECOND place
use on HF amateur bands.

>That's because the Amateur service
>has completly different goals and applications.

Yes...and to you it is a surrogate for your failed military service,
a place for you to posture and preen and act like a self-righteous
ashole about how "good" you are. Ptui.

>> Those emotional basket cases, self-righteous to a fault, are trying
>> their best (which is also their worst) at insulting anyone who isn't
>> PCTA. They can't handle controversy, can't handle anything which
>> hasn't been spelled out for them by the ARRL. Tsk, tsk.
>
> There's no controversy here, Lennie.

Yes there is, STEVIE da gunnery nurse.

Read the following carefully, it is transmitted in "slow English"
a la the VOA:

T H E C O N F L I C T I S O V E R T H E M O R S E
C O D E T E S T . R E P E A T : T H E * T E S T *

So much so that this newsgroup was CREATED to handle the
CONTROVERSY over that morse code TEST for amateur radio
licenses.

> Morse Code continues to have valid aplications in the Amateur
>Radio service.

N O T E N O U G H T O M A K E T H E C O D E T E S T
V A L I D.

>> I'm putting you down on the PCTA self-righteousness group...on

Heh heh. The humor of it failed to "earn respect" from our
resident angryperson. :-)

Back when I was in class for my private pilot's license, the
instructor was explaining about old CAA weather reports and

how they were sent every half hour. If there was significant change in the local weather, a new report would be put on the TTY tape in between scheduled times. One morning Santa Barbara (along the coast) was experiencing fog that came and went many times during several hours. SBA reports were frequent that morning, three times normal. Finally, the last TTY read, "The fog she comes in, the fog she goes out."

Instructor had a very beat-up, taped-together printout of the TTY loop and showed the class. :-)

On a global scale, you have a point. However, I was referring to
communist countries in general - and the USSR in particular - where
the commie ideology forbids the notion of any power higher than the
politburo and The Chairman.

The more intelligent people are, the more difficult it becomes to deny
the existence of a higher power. I'm personally not a very religious
man myself, insofar as I don't subscribe to the specific systems of
beliefs championed by the established, organized religions, but one
needs only look at the human body and consider how complex are all the
interactions between the various systems (respiratory, digestive,
reproductive, etc.). To me it is all far too complex to be an
accident, and I think there has to be some higher power at work - I
just don't claim to know anything about the nature of said higher
power. In the USSR there was Judaism, Catholicism, and sundry other
religions - all of them declared wrong by a government with the power
and the inclination to punish people simply for holding the beliefs
that they did. I submit that such a system of government is doomed to
fail as soon as its people get beyond the stage of worshipping the
moon and sun and start acquiring some scientific knowledge - which
raises more questions than it can answer.

>The Muslim religion is a good example.

This is one reason why I don't subscribe to the specific beliefs of
any of the established religions. Maybe it only seems like it to
me...but I find it odd that every major religion is convinced that
theirs is the only *true* way to...well, to whatever rewards they
claim await those who follow the path those beliefs say is the correct
one. They're also convinced that anyone who chooses another path is
condemned in this life and the next. The fact is that none of us
really knows and can prove which is right.

In a sense they are all right...since, as I said, religion is nothing
more than a system of beliefs people use to explain to themselves
things that they don't understand - so in a way, the "God" of Judaism
and Christianity, the "Allah" of Islam, etc. all refer to the same
higher power whose nature none of us really knows anything about.

The problem, then, comes in when groups manage to convince themselves
that they know something they don't, and set forth attempting to
correct everyone else's views on the subject using military force,
terrorism, concentration camps, or whatever.

Meanwhile, we get numerous examples throughout history of people
perpetrating various levels of atrocity upon other people in the name
of their relgious beliefs. It isn't just the Muslim religion.
Christians conducted The Crusades long before anybody even knew where
Manhattan was, let alone thought about building skyscapers there.

Add to that the scumbags who will make use of people's religious
beliefs in order to take advantage of them, and what it all adds up to
is a whole lot of harm being done by man to his fellow man in the name
of God/Allah/Jehovah/Whatever, and maybe the commies had a point
trying to keep all that crap out of their society. Problem is, there's
nothing in communist ideology to answer unanswered questions. <shrug>

We now return you to our regularly scheduled discussion of FCC Office Testing History, already in progress. :-)

>rock'n'roll and McDonald's) they wanted that stuff.

I wasn't disagreeing with your comments, merely expandiong on the
topic. Not that McDonalds should stand as a symbol of all that's great
about America or anything, but that does fall under the heading of
economic conditions, along with the designer jeans and other stuff not
available in a society where people waited in line for hours for a
simple roll of bathroom tissue.

>And it's not just 'communism' - it's any collectivist system that routinely

>values, ideals, and authority figures.

I had in mind the communist ideology typified by Marx, Stalin, and
Lenin. Although the Chinese brand of communism certainly would seem to
me to fit the descriptiom just as well.

>IOW, ideological communism sets itself up as the 'religion'. And in many ways

Why certainly! Why have people wasting their time enjoying life when
they could be serving the state (or the supreme being) instead? ;-)

I haven't read that, but in my opinion such systems fail basically on
account of human nature...assuming that the people concerned are
intelligent enough to ask themselves the question, "Just why am I
doing this?"

Not only that, but I think most civilized people have some pretty good
concept of right and wrong, so when they see their communist
government and leaders doing things they know are wrong...well, let's
just say that such governments don't help their own cause much by
perpetrating various atrocities on their own people.

The amazing thing is that for a long long time, the Bible was thought
of as allegorical. It worked and still works well as such. The hyper
literal interpretation is a fairly recent phenomenon of the early 20th
century. We had to wait almost 2K years for the "right" interpretation
to come along! 8^)

That's what "the brass" kept saying.....

Of course that really didn't save any money because the examiners
were given other tasks (primarily database entry of administrative
data) which didn't exist before.

>> The rest of us felt that it was a bad move,

In that era a detailed performance evaluation system was well
established and it wasn't difficult to terminate someone's employment
for documented failure to perform. The most politically incorrect
thing, though, was to oppose whatever scheme "the brass" came up
with no matter how harebrained it was.

So what? Kim doesn't like that characteristic in me either. But here I
am in all my beauty.

Don't mistake good manners for weakness.

> In a way, that is a form of self-righteousness...that of being so
>"important" that you won't Get Involved in any conflicts (you are "above" that).

Why, I am important, and so are you! And I'm involved in conflicts all
the time. I just choose not to be involved in the conflicts in this
group as you do. Its okay, there are a lot of people in this world, and
room for all different types.

>It also means that you don't care for anyone else, especially newcomers, since

What, no EXACTNESS? Speed of light isn't EXACTLY
that nice round figure. Tsk, tsk.

>> But you can count on contest ops to figure a way to make that work. Use the
>> transmission time as a 'buffer' of sorts. Not a problem.
>
>Ingenious use of the delay interval would permit pretty good contest
>rates. Of course the ability to work duplex would be a plus.

I am non-plussed. With a 44 minute round-trip time you wouldn't
need any sort of T/R switch, just solder some lands on a PCB to
do the same job to go from Rx to Tx and back again. :-)

>For rag chewing, contacts between fixed nonpolar stations on each
>planet up to about 12 hours long are possible if the locations are

Ah! One of the remarkable OBVIOUS statements! :-)

I hearby nominate you for three or four votes in the Department of
Redundancy Department.

Okay, now what is the PATH LOSS and what kind of Tx power is
needed at each end for a given S:N ratio?

Can you get by on amateur radio power levels? Without violating
any of the regulations?

How about Doppler Shift? How much?

Interplanetary denizens want to know! :-)

Nope...but then I'm not an amateur licensee, either.

When almost overloaded with insulting invective from an idiot
with a terrible lack of social communications skills, it isn't
possible to ignore it, is it? We are speaking of an amateur
extra who is the "iii" denizen in this din of inequity.

>> You like the image that some extras display worldwide in here?
>

Some of them DO think so, saying that objecting to THEM
personally is "the same" as saying nasty to ALL radio amateurs.

I don't feel that way...but you must.

You have your ham license. You don't have to worry about a thing.

Some other newcomer doesn't care for morse code, can't see the
need for a test on it, or just can't do it. Feel free to laugh at them
because it is keeping them out while you are in. Feel jolly and
tight having established your territorial imperative. <shrug>

By the way, don't let the door hit you in the face when you look
out...

No problem, though, for someone who takes 48 hours to reply to this
little Usenet-based QSO - and fails to reply in context of the thread
at that.

"I just noticed that I was incorrect - all by myself!" Duh.

1918. Another D-H* NCVEC proposal

Newsgroup: rec.radio.amateur.policy
Date: 2004-08-10 00:23:39 UTC
From: K&#65533;HB <groupk0hb@earthlink.net>
Message-ID: <fAURc.14700$cK.2691@newsread2.news.pas.earthlink.net>
Source record: 95594

W5YI fingerprints all over this POS.

http://www.rrsta.com/rain/ncvec.html

"Entry Level" 20-item examination, renewable forever.

No homebrewing allowed.

30 Volt limit to the final stage on all transmitters.

Ghetto-ized with distinctive call signs (similar to the "Star of David"
sleeve insignia seen in Warsaw during WW-II?)

Restricted to legacy modes (stifling experimentation with emerging
amateur techniques, SS for example)

Hopefully this one doesn't ever see daylight as an FCC docket.

What part are you in favor of.....

.....the part about an entry level licensee who takes a 20-item exam and can be a ham until he dies?

.....the part about an amateur radio licensee who cannot build their own equipment?

.....the part about an amateur radio licensee who cannot experiment with new transmission modes?

.....the part which places specific limits on the voltage values in the finals?

This whole thing flies in the face of just about every tenet of 97.1. FCC should not toss it aside lightly, they should hurl it aside with great force.

It's a two way street. What has Kerry accomplished during his entire
time in the Senate and back up your answers.

Roy said it correctly when he once stated that debating politics is a
no win situation in a news group. Just like tbone you can't provide
anything to backup anything but still you demand everyone else should.

Bush, like it or not is running with his record. Kerry, like it or not
is running from his.

Jerry

How lame. As usual, instead of actually running on Bush's record, you need to attack the other guy. Perhaps that is because Bush doesn't have a record worth looking at. What accomplishments did Bush have prior to becoming president? The fact is that it really doesn't matter. The only thing that does matter is what he did while he is president and that equates to nothing of value.

>
> Roy said it correctly when he once stated that debating politics is a
> no win situation in a news group. Just like tbone you can't provide

You said that you would vote for Lieberman, please list his great accomplishments. You are the one who keps saying that he is the best man for the job, prove it.

>
> Bush, like it or not is running with his record. Kerry, like it or not
> is running from his.

Sorry pal, but you got that backwards as usual. If Bush were actually running with his record, there would be no need to attack Kerry's but I'll ask again, what exactly did Bush do for this country. Answer - not a damn thing in 3 1/2 years and that is a failure any way that you spin it.

>
>In a sense, though, this is what civilization depends on, isn't it?

Just the opposite!

Civilization depends on people realizing that their own good is better served
by being part of a society. The reason capitalism flourished was that it
offered a way for people to work together and mutually profit. The reason
America's take on it flourished is the emphais on protecting the individual
from the group. Doesn't mean it's a perfect system, but better than an
overcontrolled collectivist system that demands as a primary rule that the
individual sacrifice for the group.

>>>Communism is at odds with religion - dooming it to failure because it

>intelligent enough to ask themselves the question, "Just why am I
>doing this?"

I think you'd get a lot out of the book, despite its flaws. Worth the read.

OTOH, some forms of economic 'communism' do indeed work - when they really do allow the workers to control the means of production. For example, consider partnerships and companies where the stock is owned by the employees. Each employee or partner contributes to and benefits by the success of the group, and has a measure of control.

Imagine a company where every employee owned stock in the company, and no nonemployee did. And each employee had a vote on its management. That's the 'communist' principle in action, without all the ideological stuff attached. Such companies do exist and succeed - in capitalist countries.

>Not only that, but I think most civilized people have some pretty good

That's part of the equation. Another was the fact that a person's role in the family was well-defined. If someone did A, B and C, they were a "good husband", and like wise doing X, Y and Z made a "good wife". Today the expectations are not only higher but also not well defined.

Tell it to Galileo. And Copernicus. Literal interpretation goes back a lot longer than the 20th century.

It's not anything new, Hans. But there is a new twist - see end of this post. And yes, W5YI had a big piece of developing it. The rationale for it was written up in an article called "Amateur Radio in the 21st Century" by KL7CC. I did a commentary/reply on that paper, which I sent to its authors and also posted here some months back.
>
>"Entry Level" 20-item examination, renewable forever.

It's worse than that. The 20 questions would include very little of the regulations or theory.
>
>No homebrewing allowed.
>
Only the assembly of "approved" kits.

>30 Volt limit to the final stage on all transmitters.

Something about shock hazard. Yet the same person can work on any other type of electronic, electrical or radio equipment with high voltages present and no license. Why house current is not considered hazardous is left unexplained.

What the 30 volt rule effectively does is outlaw anything with tubes for those with the proposed license. Got an old TS-520 or FT-101 that would get a beginner started? Sorry, they can't use it legally.

That's putting it mildly.

There's one other point, which everybody seems to have missed first time through:

The proposed "Communicator" license doesn't conform to S25, nor to CEPT requirements. Holders of such a license would probably not be eligible for CEPT reciprocal licensing. (Just like how the UK "Foundation" licenses are only good in the UK).

Simply a collection of very bad ideas. Did you read the "21st Century" paper? I can provide a link if you want.

>
> LHA / WMD

Ha! Good one. Some of that stuff is priceless.

Under basic weather watch, a "Record" observation is required on or about the hour and to be transmitted longline. After the hourly record observation, a check on the weather is required every 20 minutes. Changes meeting certain criterion require a "Special" observation to be transmitted lognline. Smaller changes meeting "local" requirements are to be sent locally only. FMH1-b covers weather observations.

When a weather forcaster finds themselves amending their forecast with every observation, it is known as "chasing observations." No skill required.

I've seen some interesting PIREPs as well. They get a little out of control on Christmas Eve and New Year's Eve.

"Beware the BPL Buzz" was really a great commentary on the BPL nonsense, written as dispassionately as possible. Heck, even a lawyer type might be able to understand the problem if they read what Peter Coffee had to say.

And without actually saying it, Mr. Coffee makes the point that the Institute of Electrical and Electronics Engineers represents the business end of the "technical profession," not the technical end - even though the majority of their membership is comprised of engineers doing technical development and support work. At least, that is my take on the IEEE's failure to take note of the severe technical problems associated with deploying BPL nationwide.

Now since you can't show one damn accomplishment of Kerry you want to
spin to Liberman .... typical of your trolling bullshit.

> You are the one who keps saying that he is the best man
> for the job, prove it.

More trolling bullshit from the expert. I said he was the best choice between he and Kerry and he is, like it or not. Where is your proof that Kerry is better. How long do we have to wait for you to put up or shut up. Oh, I forgot you don't do that , you just demand everyone else does.

>
>
>>Bush, like it or not is running with his record. Kerry, like it or not

> ask again,

Okay so asking Kerry to explain his record is attacking ..... how far will you go to parrot the party line like a good little puppet. Stand on you own two feet for a change and show us the great accomplishments of Kerry. You can't and you never will.

> what exactly did Bush do for this country. Answer - not a damn
> thing in 3 1/2 years and that is a failure any way that you spin it.
>

No spin at all. Both men's records are there for the viewing but like the good little puppet troll you are you refuse to explain Kerry's record but instead attack with hate. Where is Kery's accomplishments? Don't you have anything? Anything at all.....

Now if all you are going to do is continue with your typical bullshit troll spin instead of debate the records then this is a wasted topic. However should you get the balls to actually attempt to post or cite accomplishments of Kerry and like I said ANY accomplishment will be a start them pleas do so. I like everyone else know you won't because he has absolutely ZERO accomplishments but maybe you can imagine some which you are very good at. Can't you find anything, anything at all supportive of Kerry???????

Let's see - as of August 2004 - 675,532 hams in the U.S., while the IEEE (http://www.ieee.org/portal/index.jsp?pageID=homeonly) claims 360,000 members worldwide. I would say that if any significant part of that 675K ham membership got politically incensed and active with regard to the BPL nonsense, we could have quite a bit of influence just from our numbers. Right-and-sensible can win out over wrong-and-stupid if those in favor of right&sensible get organized. We must be focused, and make it clear to those legislators who operate mostly by the golden rule (Those who have the gold makes the rules - to suite themselves.) that their re-election could be affected by their making a "right" choice for a change.

> BPL will thrive or whither based on the success of their business model.

"Greed" is the only "business model" under examination when the BPL issues goes under the technical microscope. It's all about money, not "access" or good business.

This is exactly what I said above. No answer from you, just spin. Pretty
sad considering the man you love so much has been president for 3 1/2 years
and all you can do is yell and spin.

>
> > What accomplishments did Bush have prior to becoming

Yet more spin. I don't hate the man. You just want to spin it that way so
that you can try to avoid answering the question without looking like a
fool.

>
>
> > The only thing that

Ah, so there it is,the lower taxes and small government BS again. The problem is that it is pure crap. Except for the wealthy, just about all of the money and many times more that was returned from his tax cuts get eaten up by increased costs of living due to those very tax cuts. Then there is the expanding government BS. If things like Enron didn't happen, there would be no real need to expand the government but they do and so it does. All shrinking it does is to make it easier to corrupt and easier for scum to rip off the American citizen with little to no reduction in expenses. So you are saying that Bush's accomplishments are a higher cost of living for the average American and less protection from scumbags, yea, that pretty much wraps it up.

>

Hahahahahahahahaha, you really are funny Jerry. What I asked you for is exactly what you say to me every time I asked you to list Bush's accomplishments, LOL. I guess that you either think of yourself as a trolling bullshit artist or your typical spin just backfiired on you, your choice.

>
>
> > You are the one who keps saying that he is the best man

More spinning from the spinmaster.

> I said he was the best choice between he and Kerry and he is, like it or
not.

And since you cannot back that up....

> Where is your proof that Kerry is better.

My proof is in 3 1/2 years of Bush and the sorry state of this country. I don't recall Reagan having a stellar record prior to becoming president and yet, he is regarded as being one of our great ones. Clinton also didn't have much to brag about before becoming president and this country went threw its greatest sustained economic times in its history during his two terms. Bush Sr was the vice president prior to becoming president and didn't do shit once he got into office. What qualifications did Bush Jr have before he became president? We have elections every 4 years for a reason. We pick who we hope will be the best man for the job (except this time but we won't get into that) and after 4 years we reassess that decision by the accomplishments made. If they did well, we re-elect them for 4 more years and if not we elect someone else. Now you want to change that because of YOUR hatred of Kerry and any liberal for that matter but too bad. He didn't do a damn thing positive for the average citizen in his first term and needs to go.

> How long do we have to wait for you to put up or

Whether I demand it or not, you have yet to ever do it so in this case it is Pot, Kettle, Black.

>

Explain what, one wound????? What about the other two purple hearts, what about his saving a shipmates life, what about his bravery in battle as said by his ship mates. Funny how all of these things are pushed to the side. I guess that's because Bush being an alcoholic loser at the time has nothing to compare to it.

> Stand on you own two feet for a change and show us the great
accomplishments
> of Kerry. You can't and you never will.

The same goes for you and Bush with one critical exception, Bush is the current president and with still having no accomplishments makes it MUCH

worse than Kerry who was the leader of nothing (yet).

>
> > what exactly did Bush do for this country. Answer - not a damn

Yawn, Pot, Kettle, Black. The same can be said of Bush and he is the president for 3 1/2 years and has nothing positive to show for it at all.

>
> Now if all you are going to do is continue with your typical bullshit
> troll spin instead of debate the records then this is a wasted topic.

LOL, in multiple posts you have yet to actually answer anything. Just the typical right wing method of spin and dodge. Is that why you are in a Dodge news group, LOL.

> However should you get the balls to actually attempt to post or cite
> accomplishments of Kerry and like I said ANY accomplishment will be a
> start them pleas do so.

I asked you first and have yet to see anything and now you are running away with your tail between your legs and trying to spin it as my failure, LOL. When you can't even list a single accomplishment for a president that has been in office for 3 1/2 years, that says it all. You can try to spin it back to what did Kerry do but the same can be said for other great presidents prior to taking office so your argument holds no water. But go ahead, run away, we all know the truth.

> I like everyone else know you won't because he
> has absolutely ZERO accomplishments but maybe you can imagine some which
> you are very good at. Can't you find anything, anything at all
> supportive of Kerry???????

Yea, his war record despite your trying to trash it over one incident created by a lying doctor. Funny after all these years he would remember such a minor incident with all off the real horrors he had to deal with every day over there. BTW, what political affiliation does this doctor have, funny how nobody seems to mention that one. To bad by definition, our current president has the military accomplishment of being a deserter.

Talk about someone being self-righteous, Len! You're in no way involved in amateur radio, yet you claim that radio amateurs and those who regulate them should come around to your way of thinking on how amateur radio should best be regulated.

> It
> also
> means that you don't care for anyone else, especially newcomers, since

> others.

How right you are, Leonard. Newcomers will have to pass their exams, much in the same way that any of us who hold an amateur radio license studied for, took and passed exams. I can sit back and laugh at your antics because you've not taken one step toward obtaining such a license. If you are interested enough in amateur radio, you'll get the license. If not, who cares?

You can pontificate here forever, supported by your little electrolyte in Ohio.

> self-righteous, biased viewpoints? Nursie be mighty loud in THAT.

All Steve has to do is get on the air and make one contact using his station. In that one action, he'll have done more in amateur radio than you've ever achieved.

There was a DXepedition to Cambodia? !

By Heilian "logic" whatever Heil (the emperor) says is "true!"

:-)

>> You like the image that some extras display worldwide in here?
>
>What's it to you, Leonard. How are you involved in amateur radio? Do
>you like the image that you convey here?

What's it to YOU, Davie?

Why do you insist on being some kind of robust oberst shouting
out the "proper" Way To Go?

Nobody appointed you "leader" of anything. Not even leider.

You singing the wrong song.

>> >> I'm putting you down on the PCTA self-righteousness group...on

Tsk, tsk, robust oberst. A segue to personal insults again?

Try not to picture the rest of us as looking like yourself. No need
at all here to remove cellulite from the gluteus maximus.

>> > Putting me down as self righteous? You can do that if you wish. You

>Talk about someone being self-righteous, Len!

You do that all the time. FOLLOW ORDERS!

DO AS YOU DID! DO NOT, UNDER ANY CIRCUMSTANCES,
TRY TO CHANGE GOVERNMENT REGULATIONS!!!!

Heil must have those ORDERS on a bulletin board in front of
his retirement home...

>You're in no way involved
>in amateur radio, yet you claim that radio amateurs and those who
>regulate them should come around to your way of thinking on how amateur
>radio should best be regulated.

Poor baby. Feeling a chill from the possibility that FCC might
change regulations and remove your brag raison d'etre about
mighty macho morsemanship and amateurism?

You are snarling (with fear) in the dark of the graveyard, robust
oberst.

You do NOT enforce any regulations. You do NOT make any regulations. Quit trying to pretend you are some kind of "official authority" on who can do what. It looks so silly...like some schoolyard bully trying to "enforce" his way of thinking on all the kids...

You do NOT present a pleasant picture of U.S. amateur radio, trying to "enforce" it like it was some kind of national service rather than a fun hobby. You aren't "leader" and the hobby isn't some paramilitary "service" of macho fighting men.

Give up the territorial imperative of MAKING all others Do As You Did...just because You Did It. You don't own that right. You don't even have that right.

The rest of us citizens enjoy the freedom to comment on federal regulations and - AMAZINGLY - the power to petition for changes in them! Sunnuvagun! How about that?

Why are you so bloody insistent on trying to withhold that RIGHT from your fellow citizens?

Say goodnight, Davie.

So...you don't see any connection to RM-10870? :-)

I'm sure your "paper" on it received rave reviews and is being installed
in the Smithsonian (or somewhere).

Trouble is, IT DOESN'T MATTER.

It's all up to the FCC, not you or some fantasy "group" not involved
directly in the rulemaking process such as the Comments on a
Petition AT the FCC.

>>Hopefully this one doesn't ever see daylight as an FCC docket.
>
>It's already got an RM-number.

It must be that mental instability is endemic to morsemen.

The NCVEC Petition was submitted to the FCC before 4 Mar 04
release date. [well before...the cover letter on the ECFS document
indicates it was sent on 1 March 2003!] It is almost a year and a
half old...

IT HAS BEEN DISCUSSED IN PRINT! At length.

Hans Brakob commented on it to the FCC, with nearly the same
phrasing he ranted in here.

Bringing it up again, and Again, and yet AGAIN is NOT going to
change anything.

Let Hans rave all he wants.

Don't waste our time repeating old stuff - with the same verbiage
garbiage - all over again.

> Nah...just Internet QRM...he was reading video instead of
> morse. :-)

<rest of the duplicate message omitted>

Leo, none of the flagrant, fragrant morsemen rose to the occasion...
and bait of a simple copy posted under the alternate screen name.

They must be waayyyy too busy with U.S. presidential politics,
the economy of North America, the price of oil, and other such
high-faluting whichness-of-the-what which doesn't concern
amateur radio one bit. :-)

Suddenly there is a lot of raving and ranting about one (out of
18) petitions before the FCC on U.S. amateur radio regulations
which was sent to the FCC almost a year and a half before!

The "regular" (ravers) are now happy with their "new" bone,
busy chewing and growling, making out like mad-as-hell-I'm-
not-going-to-take-it-anymore "gurus" who know the TRUE
nature of "what is good for ham radio!"

The worst part is that they are REPEATING themselves on
that singular petition (one out of 18 total)!

It must be waayyyy too much fun just sitting there and repeating
old material in here instead of trying to look into the future and
the possibilities of real interplanetary communications.

Perhaps they've seen the folly of trying to "discuss events"
that haven't even taken place yet (prize or not) and might have
glommed onto a bit of sanity? [wonders never cease!]

Especially our friend the BS EE (space intentional 8*p), who has
been replying voluminously to other threads in the group, but has been
avoiding this one for some strange reason......

The vast number of responses to this thread in his support, however, speak volumes as to his standing in this community and the respect that he has earned <:-)

> They must be waayyyy too busy with U.S. presidential politics,

That's a fair question, Jim. It was really my XYL who persuaded me. She is a Tech, and her perspective is a bit different from mine as an Extra. It is easy to forget just how hard the theory tests seem to some people. She convinced me of the value of a true entry-level licence.

Having said that, if you let anyone loose on the air after a 20 question test, it is only reasonable to restrict them in the sorts of ways that this proposal does, i.e. no microwaves, no linears/not enough power for an RF safety assesment, no control op privileges, etc.

Even the voltage restriction is perfectly reasonable from a safety POV. Of course, it does rule out a lot of boat anchors, but c'est la vie. Do you really think someone with a 20-question test would know how to load up such a rig? In the old days they could just have asked nearly anyone, but that ain't so anymore.

Perhaps unlike the old Novices, new hams are only likely to meet other hams after they get QRV. Most of them won't have anyone to warn them of the dangers of electrocution, etc.

As for CW, you all know my views. The code test is gone in most European countries, the only effect of which seems to be an increase in HF activity (the HF bands may be virtually dead, but I was EI4VXI for a week recently, and heard it from that end).

73 de Alun, N3KIP

PS: I think that the existing grades of licence should all be merged into one, whereas this proposal maintains a General/Extra division.

True in private industry too. You don't last real long opposing
what the high level muck-a-mucks want... The part that really
sucks is that when the company makes a bad move they lay off the
low level people and the ones who f-ed up stay on...

>>others.
>
> Wow, sorry you feel that way.

Read that as: "I see myself as the saviour of modern Amateur Radio, and none know as well as I do what Amateur Radio needs despite not BEING an active Amateur."

Lennie struck out trying to impress his "professional" peers with his "brilliance" and "insight" and so decided to bestow the Amateur community with his knowledge and skills. he couldn't get professionally "published" so he changed focus.

The problem is he came into the Amateur Radio arena with the same "You'd darned well better listen to me because I know better than you" attitude and now he wonders why no one (save the lame, lazy and easily impressionable) want anything to do with him or his opinions.

Because he was responding to an Australian, where they do have an annual
fee, higher than the vanity fee. The "worse" part was because not only
is it cheaper in the US, but there is no fee at all for the actual license,
just if you want a special callsign.

It's the same thing in Canada. The annual fee had gone up steadily, so
it had to be more expensive than in the US where the fee when it was
in place had been for ten years. The annual license fee was ten dollars
in 1972, when I was first licensed, and went to $13 in 1975, then $20 in
1985, $22 in 1990, and then $24 in 95. When I added it up in 2000,
I paid $490.50 over 28 years.

Then they dropped the license fee here in 2000.

It hasn't really been long enough to judge whether the amateur radio
service gets worse treament as a result of no license fee.

>You've gone over to the dark side of the force.

We are not amused.

>You've kept silent
>on the insulting behavior of these U.S. radio amateur "extras" and then
>tried to encourage turning this newsgroup into a private little Chat Room.

You've kept silent on the insulting
behaviour of anyone who agrees
with you. Therefore, you condone
it.

And your behaviour is the most
insulting of all.

> If you need private little Chat Rooms so bad, contact your ISP. They
> can arrange for you and cronies to have one for your very own. Really!

How is anyone trying to make
a Usenet newsgroup into a
"chat room"?

> Folks in here don't even understand Taglines...a formerly venerable
> custom of funny nonsense phrases and sentences that have nothing
> (usually) to do with the message body.

Perhaps because you are not
funny.
>
> This is a humorless place.

To you. We find it quite
humourous at times.

> What passes for humor among the PCTA
> is a lot of hollow personal insults and self-righteous giggling and
> harassment of those trying to argue SUBJECTS, not people.

Most of your postings here
consist of " lot of hollow
personal insults and self-righteous
giggling and harassment of those
trying to argue SUBJECTS, not people."

We don't find them funny at all.

> Of which country? As an American I used to think other Americans
> would respect free speech. NOT in amateur radio of the USA.

Free speech means that
others are free to disagree with you
and criticize you. You seem to
have a lot of trouble with that
concept.
>
> Check out Kernel Klink's comments: Anyone who is "interested" in
> radio MUST get a ham license!

We have never seen anyone
claim that except you.

> Like an entire engineering career IN
> radio-electronics is "NOT" showing an interest?!?!?

Not an interest in amateur radio.

> Some poor, disadvantaged, non-electronics employed emotional
> basket cases in here are jealous that I began in radio at the TOP of
> HF communications.

We are not jealous of you.

In fact we are rather puzzled as
to why you are so obsessed with
a radio service in which you are
not licensed.

> Poor babies. Nearly all of them didn't even
> exist when I started.

Does age somehow make you superior?

> They've got the brainwashing to insist that
> morse code is still used in communications (it isn't outside of ham
> radio) or that MARS >>IS<< amateur radio! [among several myths]

Are you the Manchurian Candidate?

Is Morse Code still used by radio amateurs?

> Those emotional basket cases, self-righteous to a fault, are trying
> their best (which is also their worst) at insulting anyone who isn't
> PCTA. They can't handle controversy, can't handle anything which
> hasn't been spelled out for them by the ARRL. Tsk, tsk.

Of all the people who post here
you seem to be the one who
can least handle controversy or
disagreement with any level of
civility. But you are very

adept at insults to anyone who
disagrees with you.

Perhaps the ones you criticize
so much are simply following
your lead and example.

There's where we run into a little problem. The ham careerists on
here have declared that astronaut hams aren't "real" hams.

Stay tuned to the ARRL
> News opening page for all those "ham-astronauts" and how
> ham radio inspired all of them to become astronauts! :-)

Sounds incestuous.

One of the STRANGER sentence structures gunnery nurse ever
blabbered. ???

I don't "demand" anything, nursie. Certainly not the marching in
ranks to the beat of morse under the Newington flag like the
proud noble amateurs did in the 1930s...

>>> In a way, that is a form of self-righteousness...that of being so
>>>"important" that you won't Get Involved in any conflicts (you are "above"

Wow! Totally weird! NO understanding whatsoever by nursie.

Poor guy must have a contaminated stash...or bad T-gold or
sumpin'.

>>>It also means that you don't care for anyone else, especially newcomers,
>>since
>>>newcomers will be the most affected by any morse code test. You can

>
> Read that as: "I see myself as the saviour of modern Amateur Radio, and
>none know as well as I do what Amateur Radio needs despite not BEING an
>active Amateur."

Poor nursie got NO comprehension anymore.

I see myself as just trying to get rid of the morse code test for U.S. amateur radio licensing. :-)

I see myself using an American dictionary and spelling without so many U letters...such as in "savriour."

I see myself in the mirror every time I look into one.

Pity that nursie casts no image. Supernatural! :-)

> Lennie struck out trying to impress his "professional" peers with his
>"brilliance" and "insight" and so decided to bestow the Amateur community with
>his knowledge and skills. he couldn't get professionally "published" so he
>changed focus.

I couldn't? Sorry, but I DID get professionally published...for money!

I was showing "brilliance" and "insight?"

Well, to the near-total iggorant, it would LOOK like "rocket science!"

Hmmm..."Brilliance." Yes the high-intensity spotlights made by EOS were VERY bright.

"Insight?" Yes, again. Looking through 10-power stereo microscopes (used in spacecraft electronics fabrication) does give one sight INTO small things...X-ray imaging is even better for that! :-)

> The problem is he came into the Amateur Radio arena with the same "You'd
>darned well better listen to me because I know better than you" attitude and
>now he wonders why no one (save the lame, lazy and easily impressionable)
>want anything to do with him or his opinions.

Nursie be gone, outasight, cracked-up, bonkers, nuts.

Poor nursie. He need proper medical help. NOW.

Nursie SHOULD make that "commit call." To put hisself away.

Pbththththththt....

I was surprised by the REPETITION of RM-10870 anti-VEC
rhetoric and the REPETITION of old, cliched, worn-out verbiage
garbiage on it in another thread!

The FCC is sitting on no less than 18 (count 'em - 18) petitions
for change of U.S. amateur rules. All anyone seems to want to
do is vent, rant, rave on just ONE of the old ones originally sent
to the FCC on 1 March 2003!

>BTW, you mentioned in an earlier post that you have a Patent
>registered to you, in the area od radio. Interesting - mind if I ask
>what it was?

U.S. # 3,848,191 - Pulse Compression Receiver with AGC, granted
in 1974, assigned to RCA Corporation. Sole inventor on patent.
Missed two other applications due to being too close to prior art.

Basically it is a pulse processor and operating in an environment
of many different pulses, only a few of which come close to being
in synchronism with the system. The application was for SECANT,
an R&D project for 4 years at RCA, the acronym standing for
SEparation and Control of Aircraft by Non-synchronous Techniques.
SECANT was an aircraft collision avoidance system and in direct
R&D competition with a modified helicopter station-keeping system
done by Minneapolis-Honeywell. Both the RCA and Minnie-Honey
systems were flight-tested successfully in PA at the (former) Naval
Air Development Center (NADC). Flight testing local in PA, at the
Patuxent River range, and at Key West, Florida, observed by FAA
troops locally as well as USN and USA people. First air tested at
Kern County Airport #7, Mojave, CA...("Mojave International" in fun)
now the site for Scaled Composites, the first company to make it
into space privately.

SECANT worked at 1.6 GHz nominal bandcenter. The final version
(of three) in 1974 used 8 SAW (Surface Acoustic Wave) matched
bandpass filters done on quartz substrates (done at Sommerville,
NJ) at 1 MHz bandwidths centered between 55 and 64 MHz. I got
to play with the SAW filters and the final version IF-detectors plus
the pulse pre-processor. Al Walston, W6MJN, and I shared
responsibility for the Tx and Rx parts. Jim Hall, KD6JG, was the
engineering technical manager over the last two versions of
SECANT and all of RIHANS, another R&D program, again working
in L-band at the RF level.

The U.S. government scuttled any more testing funding in 1974 for
both the RCA and Minnie-Honey systems, opting for a less-tested
ATC transponder modification which is now in use, but only by the
air carriers and large executive aircraft. Military doesn't use that
system. MIT had friends in higher places to sway gubmint opinion.

RCA Corporation began (well before WW2) as a place to hold
U.S. patents and try to keep control on the then-new technology
of radio. As a result, RCA built up a fantastic legal staff and pursued
patent filings aggressively. Back in '74 the average cost of any
electronic patent application cost about $6000, nearly all of it being

taken up by the non-patent-office Search costs. Corporate
employees of the lower levels would not get much chance to patent
anything unless a corporation had a large legal staff. I was lucky in
getting a sole patent award and don't sweat the other two at RCA
nor the one multiple-inventor patent turn-down at Electro-Optical
Systems (Xerox division). [sometimes good minds think alike! :-)]

No, that wasn't a complaint. More a comparison to what it might have
cost US hams over the same period. You never had a yearly fee, at least
not in recent decades, and there hasn't been a fee for some years.

>
>>Ha! Good one. Some of that stuff is priceless.
>
> What's "priceless" is Lennie telling even more stories from before the
>Eisenhower administration.

I've worked under the Truman, Eisenhower, Kennedy, Johnson,
Nixon, Ford, Carter, GHW Bush, Clinton, and GW Bush
adminstrations. Long time span as an adult.

Nursie thinks that is a crime?

>Of course his pursuit of a pilot's license ended
>up the same way his Amateur license has...Hasn't got one...

I got my commercial 'phone license in 1956, the same year
I started my electronics career...which I kept going in until
retirement. For a short while I had a CB license...way back
when that was a necessity. About as long I "had the station
license" of a PLMRS radio as co-owner in a small business.

Had a choice from late first wife to buy a house, not an
airplane. I (wisely) chose the house. Still living in that.
No perqs from Unca Sam or the mighty C-A-P to furnish
the aircraft, servicing, A&P mechs, avgas, etc., etc. etc.

In 1962 a Mooney single-engine, 4-place, retracts, gen-av
plane cost $30,000 with minimal electronics on board. Hull
insurance annual premiums for under-200-hour privates
was 10% of that! My present residence cost $30,600 in
1963. It's worth anywhere from $300,000 to $400,000 on the
market today (depending on the realtor).

>>I've seen some interesting PIREPs as well. They get a little out of
>>control on Christmas Eve and New Year's Eve.
>
> Uh huh.

A note for our non-aircraft friends: "PIREP" is an acronym for
PIlot REPort, any advisory notice from individual pilots about

anything different along an air route...or just aloft WX conds.
Not necessarily anything "formal" about PIREPs although the
FAA would like it to be orderly.

Of course, to the Angry Birdmen of the Mighty C-A-P, everything
MUST be handled is proper, precise, no-nonsense, strictly formal
manner...or they get stripped of their many-patches poopy suits
and marched out the main entrance...without the airport band.

Ordinarily I'd note the Flying is not in the realm of amateur radio
policy matters. However, the PCTA regulars in here ARE "flying"
on something weird! I don't want to know what that substance IS!

"Real" = high-rate morse code tested. :-)

There should be ONE of those amongst the many astronauts.

Nearly all of the amateur radio licensed astronauts simply got
another assignment to get a Tech license so that they can
play NASA PR games with schoolkids back on the surface.

ARRL makes it out that each and every one of those Techs
is doing some kind of heroic act in becoming licensed. ARRL
does wonderful spin about that.

> Stay tuned to the ARRL

In the USA it definately would not, as all fees get dumped into
a giant bucket of money, along with all the other taxes you pay.
Then Congress divies up all that money.

>cost US hams over the same period. You never had a yearly fee, at least
>not in recent decades, and there hasn't been a fee for some years.

I'm sorry if it sounded like I was acknowledging a complaint...wasn't my intient.

I am in favor of a yearly fee if it would garner even more enforcement activities by our feds...Unfortunately the "freeband" movement was set in motion by the American Federal Communicaitons Commission when it let CB radio loose on 11 meters. Hams at the time said it was stupid to put a "short range, low power" radio service on 11 meters, but Uncle refused to listen.

Oh well...NOW they can clean it up!~

I faceciously suggested (altho Hans took it verbatim) that we get some really big fees...I am certainly not in favor of THAT, but I think fees in the $25/year range would not be inappropriate...IF we got a correspondingly greater degree of service in exchange for our money.

>convinced me of the value of a true entry-level licence.

I agree that the entry-level license could be improved. But what NCVEC proposes
throws the baby out with the bath water.

With all due respect to your XYL, bright elementary-school children have earned
Extra class licenses. How difficult can the tests really be?
>
>Having said that, if you let anyone loose on the air after a 20 question
>test, it is only reasonable to restrict them in the sorts of ways that this
>proposal does, i.e. no microwaves, no linears/not enough power for an RF
>safety assesment, no control op privileges, etc.

I agree with some of that. Power restrictions reduce/eliminate the RF exposure
troubles, for example. But the NCVEC proposal goes too far.

And it's not just the number of questions that's important. The material
covered is much more the issue. IMHO the current tests cover a lot of areas at
a fairly superficial level, rather than basic information in some depth.
>
>Even the voltage restriction is perfectly reasonable from a safety POV.

I disagree!

There's no license requirement to work on non-radio electronics like stereo
amplifiers. Nor to work on house-current powered appliances. Yet all of a
sudden there's some sort of extreme hazard if a "Communicator" has a

transmitter with 50 volts on the final amplifier transistors.

For that matter, what about power supplies connected to the AC line? More than 50 volts inside them.

>Of course, it does rule out a lot of boat anchors, but c'est la vie.

It's a stupid rule, and there's no reason for it. Heck, under the rule, a "Communicator" ham could use a BA *receiver* with 300 volt B+, but not a modern transceiver with 50 volt finals (which do exist).

And what about antennas? Many types of antenna, when fed the 100 or so watts of RF allowed by the "Communicator" license, will have exposed parts with hundreds or thousands of volts on them. Shall we require that "Communicators" only use certain approved antenna types?

>Do you
>really think someone with a 20-question test would know how to load up such
>a rig?

Yes! Or they'd learn. Instruction manuals, newsgroups, Elmers, etc. Lots of info sources out there.

One of the most basic reasons for amateur radio to exist is to facilitate and encourage learning by hams. Undue restrictions work against that.

>In the old days they could just have asked nearly anyone, but that
>ain't so anymore.

Sorry, Alun, I don't accept that argument at all.

I got my Novice license at the age of 13 back in 1967. Written test was 20 or 25 questions, multiple choice, all of them basic radio and regulations. None asked how to tune up a typical transmitter of the day.

My first transmitter was homebrewed by me from available parts, using ideas from books and magazines. Nobody showed me how to build it or tune it up; I just read the articles and figured it out. 350 volts B+ but I never got shocked by it. Just a little common sense. Hundreds of thousands of other Novices from 1951 onwards have similar stories.

>Perhaps unlike the old Novices, new hams are only likely to meet other hams
>after they get QRV.

I don't accept that argument either. Hams today have *more* Elmering resources than ever before. Just look at all the online amateur radio resources available for free.

>Most of them won't have anyone to warn them of the
>dangers of electrocution, etc.

Nobody warned me. I'm still here.

Basic electrical safety is part-and-parcel of any amateur license.
>

>As for CW, you all know my views.

And mine!

> The code test is gone in most European
>countries, the only effect of which seems to be an increase in HF activity
>(the HF bands may be virtually dead, but I was EI4VXI for a week recently,
>and heard it from that end).

I don't find the HF bands to be virtually dead at all. But I work mostly CW,
and things on that mode are hopping!
>
>PS: I think that the existing grades of licence should all be merged into
>one, whereas this proposal maintains a General/Extra division.
>
Then why not support K0HB's proposal? Even though I disagree with some of it,
Hans' proposal is much, much, much superior to the NCVEC proposal. Which should
not only be hurled aside with great force, but also stomped into the dust.

What exactly do you mean by "existing grades of licence should all be merged
into one"? Does this mean all existing hams from Novice to Advanced would get a
free upgrade to Extra (full privileges)?

Or how about this for the entry-level license class (from ideas I've posted
here several times):

3) "Basic" license test is simple 20-25 question exam on regs, procedures,
and safety. Very little technical and RF exposure stuff. Main objective
is to keep Basics out of trouble. Basics get 100-150 watts on HF/MF and
25 watts or so on VHF/UHF (power level determined by RF exposure limits).

Modes are CW, analog voice, PSK31 and many of the other common data
modes like packet. Basics cannot be VEs, control ops for repeaters, or
club
trustees. Basics get most VHF/UHF and about half of HF/MF spectrum. Basic

is meant as the entry level. Easy to get, lots of privs, yet there's
still
a reason to upgrade.

Why not?

> a reason to upgrade.
>
>Why not?

Why not do like the Germans and create an "operator only" license? The
purpose of which is to allow a person to operate a radio, but under the
supervison of an experienced operator. Then after some period of time or
minimum operating hours, the "student" is eligible for an upgrade?

Or why don't we quit wallowing in all this administrative quagmire and
just "get on with it"...??? As you and I have both pointed out on numerous
occasisons, Jim, Gradeschoolers are passing the EXTRA, ergo there's little
validation for a new "entry class" license...

Now...if the POOLS were closed and the applicants actually HAD to LEARN
something, there MIGHT be a reason to have a simpler test to get started with..

Very impressive - thanks for the summary. I'd never heard of the
SECANT system before.

That would have been quite a challenge back in '74 - all discrete
components, no microprocessors, no CAD tools or circuit
emulators....real hands-on design work.

No wonder you're getting so much heat here, Len - clearly, you are out
of your league. Are you aware that there are folks here who have
successfully assembled their own Elecraft kits, and built working CW
transmitters from plans? <:-) <:-) <:-)

> Masters not from the University of Illinois but from some mythical
> correspondence school.

You've done that to others - and much more.
What goes around comes around. You can
dish it out but cannot take it.

> You've insulted my service record and pride
> in military service (despite being given the proper title and MOS) and
> made non-detailed allegations of work conduct from unspecified
> persons.

You've done the same thing, to people with and without
military and government service.

In addition, you have insulted other people's education,
gender, ethnic background, geographic location,
amateur radio license class, age, religion, ARRL
membership, Morse Code skills, and various
other attributes. Even when they have not insulted

you at all.

> In other words, you've not only insulted both Brian and
> myself but you've gone off the deep end into LYING behavior.

It is said that imitation is the sincerest form of
flattery. You have led the way into those areas,
yet you are angered when someone flatters you
for setting the example.

We think you should examine your own behaviour.
It contains everything you find unacceptable in others.

The same goes for Mr. Burke.

> This newsgroup isn't some amusement park shooting gallery where you
> can plink off nasties to your heart's content.

That is a very good description of your behaviour here.
Why is such behaviour acceptable for you and Mr. Burke
but not for others?

> It is filled with folks who
> really want to discuss issues

You do not appear to be one of those people

> and some of those folks CAN shoot back
> when personally insulted!

Then why do you personally insult people who try to
discuss issues? Even when someone does not
insult you, your replies are full of insults.

Why is that?

> Most of us have far more "ammunition" than
> you've ever acquired.

Then why not discuss the issues? Without
the insults? People have tried to do that
with you, but after a few postings you
resort to various insults and untruths rather
than civil discussion. You attack the person
rather than the message.

We wonder at your real purpose here.

Let's see....

If an investment of $30,600 is worth $350,000 after a
period of 41 years, the annual interest rate works out
to be approximately 6.015%

That's only a bit ahead of the long term inflation rate
A house has insurance, taxes, and general upkeep.

We are not impressed.

Len, you must not, you cannot hold an opinion about amateur radio because you hold no amateur license (shure). Furthermore, this apparently isn't America anymore. You must not, you cannot voice those opinions in a forum that is supposed to be for amateur radio policy discussion. Shame on you. What were you thinking?

I'm thinking that Dave is a crank and a kook.

None of the "heat" Lennie is taking is due to his alleged professional
career or what he thinks he knows...it's about lying, antagonism, profanity and
not doing what he says he's going to do.

In short...he's a creep.

No...we are not.

And Lennie's home is just like his pilot's license...He ALMOST made it to a license, and he ALMOST wound up in an $800K gated community. And he's ALMOST a licensed Amateur...just has to drop in to the VE and take that exam...but THAT won't happen either.

Lennie's life is a whole parade of "almosts".

>
>> Poor baby. Unable to understand that your behavior in here is NOT
>> acceptible?
>
> Acceptable to whom?

If Lennie didn't write it, it's not acceptable...And even then, it may not be acceptable when the tone of the conversation changes. IE: "I am going to get my Extra Lite out of the box". He's since insisted that wasn't REALLY what he meant, and continues to make excuses for not being able to successfully do what gradeschoolers have done.

>> So far, you managed to write direct insults to both myself and Brian.
>
> So far, you have written direct insults to almost everyone

> dish it out but cannot take it.

Yeppers.

Exactly.

Lennie expects to be treated in a manner that he determines, but that when the treatment HE doles out is fed back to him, then it's problematic.

As for his wife's alleged psych degrees, I can't beliee a woman with that kind of (alleged) education could be married to someone who manifests all of the abberant behaviour that Lennie does and allow him to go on the way he does.

>> You've insulted my service record and pride
>> in military service (despite being given the proper title and MOS) and
>> made non-detailed allegations of work conduct from unspecified
>> persons.
>
> You've done the same thing, to people with and without
> military and government service.

Of course he has.

IE: "Dill Sergeant" "Murine Corpse", etc etc etc.

And of course we have archives with Lennie's lame attempt to embellish his own military service with the sacrifices made by Soldiers who were KIA three years before Lennie was IN the Armed Forces.

Then there was the time Lennie said >>HE<< handled "1.2 million messages" at his posting in Japan...

Of course we are STILL faced with the issue that his MOS, which he wails about others allegedly misrepresenting, was as a maintenance person. Was he a radio operator or a maintenance tech?

And please note Lennie is verrrrrrrrry defensive about HIS "title(s)", yet he continues to fabricate some thing about "rank, title and privilege" claims allegedly made by Amateurs.

More of the "Do As I Say..." routine.

> In addition, you have insulted other people's education,
> gender, ethnic background, geographic location,
> amateur radio license class, age, religion, ARRL
> membership, Morse Code skills, and various
> other attributes. Even when they have not insulted
> you at all.

All too true.

One of Lennie's unsubstantiated claims is that the ARRL is "dishonest". He's accused the organization in general and some members inparticular. We've pressed him like cheap grapes to validate that claim, but it too languishes on the pile of unanswered questions.

And Lennie has repeatedly claimed that he does not treat with disrepsect or diminutive terms those who don't so the same to him, yet almost any post he

makes that references Jim Miccolis, N2EY, calls him "Jimmie", "Rev. Jim, and others. However I have never seen Jim refer to him as anything by "Len"...

>> In other words, you've not only insulted both Brian and

But it's not lying if it's true.

Leonard's track record in this forum more than substantiates most of the claims I have made about him. I don't need to do "anything"...Lennie just launches into another tirade and does it for me. He's more predictable than Halley's Comet.

> We think you should examine your own behaviour.
> It contains everything you find unacceptable in others.
>

> but not for others?

"Do As I Say But Don't Do As I Do".

>> It is filled with folks who
>> really want to discuss issues
>
> You do not appear to be one of those people

Lennie is well known for chastising people for deviating from "the subject", yet one does not have to look far or hard to see he is "all about" perpetuating threads that have nothing to do with the "Morse Code test issue".

>> and some of those folks CAN shoot back
>> when personally insulted!
>
> Then why do you personally insult people who try to
> discuss issues? Even when someone does not
> insult you, your replies are full of insults.
>
> Why is that?

I have already fielded my theory on this...Two, really...The first is that Lennie is more impressed with his own "contributions" to radio than his

"professional" colleagues were, and lashing out is a normal thing for him.

Although I have no proof of it, I am willing to be his "patent" was the work of many others, and it was only through some skillful paper shuffling that his name and his name only appears on the patent. How much you want to bet if we find some folks who worked with him THEN they would express some remorse at having ever been in the same room with him?

Some personal discussions with former colleagues of Lennie's in Warminster, PA, tend to support this theory. His performance there was lackluster, so say the least.

The other is that, having failed to get the recognition he thought he was due from his "professional" colleagues, Lennie entered the Amateur Radio arena, certain that his "superior intellect" would be immediately recognized and revered as the God of Radio Knowledge he perceives himself to be...

In as much as THAT didn't happen, Lennie lashes out at us for having not given him his due...

>> Most of us have far more "ammunition" than
>> you've ever acquired.
>
> Then why not discuss the issues? Without
> the insults? People have tried to do that
> with you, but after a few postings you
> resort to various insults and untruths rather
> than civil discussion. You attack the person
> rather than the message.

Because his issues without the hype and harrassment are pretty thin. Transparent, actually...

Lennie's one and only "justification" for his position is that "the military doesn't use Morse Code any more so Amateur Radio shouldn't."

It's been an uphill march trying to get Lennie to realize that this forum is about AMATEUR Radio...Not 1950's Army radio...Not PLMRS...Not commercial broadcasting or software engineering.

> We wonder at your real purpose here.

His EXACT words were "I am only here to civilly debate the Morse Code test issue".

As you can see, there's a LOT he says but doesn't live up to.

It's been a lifelong trend.

Have you yet contacted the French authorities yet regarding illegal
amateur radio activity by their nationals? You might want to take up
the issue with the IARU, the ITU and the UN. Better hurry; those QSOs
are growing whiskers.

You're a pathetic little welp whose destiny seems to be as assistant to
a shriveled up geezer who has no involvement in amateur radio.

You two may resume your "Charlie Chan/Number One Son" routine.

And that is perhaps the most telling point, Steve. If a 9 year old kid
can pass the Extra, there is no reason to make tests easier. I don't
doubt that the child is a bit exceptional, but there are the Technician
and General licenses, which are certainly easier.

I don't think there are any good reasons to have a simpler test. If anything, I would like the Extra made harder.

K4CAP/K4YZ wrote: (about license fees)

> I think fees in the $25/year range would not be inappropriate.

So let's take a poll:

Q1: If it cost $250 (plus testing fees) for a 10-year license would you have become a new amateur radio operator?

--- or ---

Q2: If it had cost $250 to renew your license each time over your ham radio career, would your license have lapsed by now?

Here are my responses:

Q1: Not a chance.

Q2: When raising a family, spending $250 on a discretionary avocational item would have been out of the question.

The test is hard enough, IF we were really testing applicants on thier
knowledge...We're not...We're testing them on the questions.

Would you want to go under the knife of a surgeon who got through medical
school on "open pool" testing? =0

If the test regime was such that the examinations were comprehensive
enough to justify the privileges granted (it currently is not), then a
simple test for a limited-term learners permit (like the original Novice
concept) would be very appropriate.

> So far, you could hear a pin drop.......

Tell us what the path loss and and Power for a given S/N ratio is. Pick a position and date for that position and tell us.

Tell us what the Doppler shift is over the length of a short QSO, starting at the time of of start Assume a DX style QSO with a short feedback message to insure actual reception on both ends, say a 35 second transmission. Then the same for the return message.

At this time I don't know those details, but I'll be happy to check them out once you've posted them. Add anything I have forgotten but may need to know.

If you had to drop it at once, maybe not. But WHO said "all at once"?

Part of the reason the FCC license structure is at "10 year" intervals now
is that it's too expensive otherwise. You get all those Amateurs chipping in
$25 a year for license every year and watch how fast they'd change THAT.

But there are very few people who CAN'T drop $25 right now for some
recreational purpose.

Most of us are spending about that much A MONTH for ISP service...More for
broadband...So P L E A S E don't try THAT tact, Master Chief. It's baseless.

Furthermore, one only need see that the manufacturers seem to be confident
enough in the financial solvency of the Amateur Radio program in order to do
R&D and subsequently manufacture radios that START a $1500, now as high as $12,
000 or more! And they are right.

Now...if people can afford alcohol, CD's, cigarettes, XBox's and other "recreational" pursuits, they can also manage to prioritize $25/year for Amateur Radio if that's what they want to do.

And if THAT is not good enough for you, Hans, we'll get Congress to allow prorated license fees based on their tax returns.

Or is there some other argument you'd care to pursue?

The tests themselves are thorough. It's the fact that the applicant can
have a fair idea of the verbatim content of the tests that make them
"inadequate".

But your poll (and comments in other replies in various threads this week)
were in direct response to and in contrast to my suggestion FOR license fees.

Your "poll" was worded in such a way as to elicit a "bleeding heart" reply
over necessary household expenses as opposed to paying for "dsicretionary
avocation" expenses. If that wasn't trying to "pad" the results, I don't know
what was...

Perhaps you'd care to exercise some of your claimed education and reword
your "poll" in such a way so as to elicit more valid responses without being
confrontational?

$250 does seem like a lot of money.

But then, the issue is that one is expected to pay it in a lump.

As I said, we had an annual license fee here in Canada up to 2000,
and it was just part of the cost. But if it was that you paid
once every ten years, I think it would affect things, maybe dramatically.

It's cheaper to require a renewal only every ten years, but that would
then require a lump sum, that might be a difficulty to some or many.
Of course, an annual fee paid annually would offset the cost of
an annual renewal.

Of course, an annual renewal has other benefits. Ten years seems a long
time, and it doesn't allow for keeping track of the hams. When they dropped
the license fee for hams here in Canada in 2000, licenses became lifetime.
Not only are we not paying a fee once a year, but even that level of
interaction between the ham and the regulatory body has disappeared. I'm
not sure that's a good thing.

Because it goes against the Basis and Purpose of the amateur radio
service as defined in Part 97.

> The
> purpose of which is to allow a person to operate a radio, but under the
> supervison of an experienced operator.

We have that now. A licensed ham is the control operator, and someone
else actually turns the knobs, pushes, the buttons, talks into the
mike, taps on the keyboard.

The words "operate an amateur radio station" have an exact definition
under FCC rules. It means to be in charge of the station, even is
someone else does the actual knob turning, etc.

> Then after some period of time or
> minimum operating hours, the "student" is eligible for an upgrade?

Based on what other requirements?

Such a system would essentially require that a prospective ham would
have to know a more-experienced ham in order to operate. Why do we
need such complications?

> Or why don't we quit wallowing in all this administrative quagmire and
> just "get on with it"...???

What "quagmire"? The FCC amateur radio license system today is far
simpler and more accessible than at any time in the past 35 years.

> validation for a new "entry class" license...

That doesn't mean things can't be improved. Do you *really* think the
current Tech is the best we can do for an entry-level license? I
don't.

What is wrong with the "Basic" license I propose above? If you don't
like the name, call it something else, but what's wrong with the
concept?
>

Write up a proposal to close the Q&A pools and submit to FCC. Be sure
to explain in a convincing manner:

- why this change needs to be done
- how the pools will be used and safeguarded
- how prospective amateurs will know what to study without access to
the pools
- who is going to do all the work needed to make the change
- how the whole system will be protected against "Son of Bash"
- how all of this can be done without it costing more FCC resources

Of course not, but it's a straw man you've assembled. You're the only one that I've noticed who has assumed that a license paid for with fees would continue to have a term of ten years, and you're the only one that I've noticed who has assumed that said license would require payment in full.

I'd easily pay $50 every two years for my amateur radio license. If my license required $250 for ten years, I'd budget for it. Now, if the FCC wants to get the cash and continue to encourage new hams, they'd make the first ten-year license free, with each subsequent ten-year license renewal costing $250. In that case, you'd have to budget for it if you wanted to renew it, but you wouldn't be dropping a large chunk of change for an untested hobby.

Personally, I don't think "having a large number of licensed amateur radio operators" is necessarily a good thing for amateur radio, at least in the USA. I would personally prefer to see one-tenth as many operators with each of those operators being active in at least one common facet of amateur radio (contesting, rag-chewing, emergency services, et cetera) and one uncommon facet of amateur radio (spread spectrum, innovative antenna/rig design, alternative power, et cetera). At least then the assertions that amateur radio operators advance the state of the art of technology and contribute to the health and safety of the community at large would have as much weight as the assertions that hams are just a bunch of overweight balding white men wasting valuable spectrum by discussing their colostomies and deviated septums. Sure, the ARRL and other lobbyists would lose "the power of numbers", but quality's worth more than quantity to me, and I suspect the FCC might actually agree, given a moment's freedom
- From the political and economic overtones of every word that passes in

and out of their offices.

But those are just my personal opinions, of course.

Jack.

Sounds a bit like CB rules... But you do need some
knowledge to mess with a transmitter and not trash the
radio spectra.

>
> 30 Volt limit to the final stage on all transmitters.

Whats the point if you don't all homebrewing? I'd set
a power limit consistant with that in recently made and
sold equipment (so used equipment is usable, and new
equipment bought is usable and reasonable after he upgrades.

Ask a few electrical safety questions on the test. That should
address safety concerns.

> amateur techniques, SS for example)

This is probably to avoid badly thought out experimental modes.
Something that turns out to trash the radio spectrum...

But once a new mode is proven by other hams I'd let this new
license class use it.

> have become a new amateur radio operator?

A1: Not at the time I did (age 13, 1967). Maybe not at all.

Even if you adjust for inflation, it was a lot of money for me back
then.
Today I'd spring for it.

In the late '60s and early '70s I could (and did) build a pretty good
station for less than $50. CW, of course, but capable of worldwide
communication.

> --- or ---
>
> Q2: If it had cost $250 to renew your license each time over your ham
> radio career, would your license have lapsed by now?
>
A2: No. By the time I was 23, I would have spent $250 for a ten-year
license. But that question is somewhat academic because without a
license in the first place, renewal would not matter. While coming up
with $250 in one lump would be difficult, I would simply have saved up
for it.

--

There's a bit of marketing psych going on here, of course. Asking
somebody to cough up seven cents a day or forty-nine cents a week
isn't the same thing as asking them to pay $25 a year. And asking them
to pay $25 a year isn't the same thing as asking them to pay $250 for
ten years, payable up-front.

The smart marketer knows that you need to make the initial payout
relatively small. That's why there was never any fee for a Novice
exam.

--

Hopefully, Hans will submit his proposal to FCC before it's too late.

>one that I've noticed who has assumed that said license would require
>payment in full.

Of course it was a strawman. Hans is as bad about being unifocal on his
own views as he accuses others of.

Hans' "poll" was along the lines of "Do you enjoy beating your wife"...

Here are some options that would have better assayed the demographic:

Would you be in favor of a yearly license fee for your Amateur Radio
license

(1) Yes

(2) No

If a yearly license fee were imposed, it would:

(1) Be no problem

(2) Be of little problem.

(3) Negatively impact my finances, but I'd work it out

(4) Would preclude me from Amateur Radio licensure

If you would be ameniable to a license fee, assuming a commensurate return of service, what would you consider a reasonable fee?

(1) $1 to $5 a year

(2) $6 to $10 a year

(3) $11 to $15 a year

(4) $16 to $20 a year

Of course these options would not have provided Hans with the desired "See, MY opinon was THE right one..."

>I'd easily pay $50 every two years for my amateur radio license. If
>my license required $250 for ten years, I'd budget for it. Now, if

>a large chunk of change for an untested hobby.

That's an idea. Or another idea...Your operator license and simple station license are free...(make 2 meters an automatic "gimme"), then each additional band you want to operate is "extra".

>Personally, I don't think "having a large number of licensed amateur
>radio operators" is necessarily a good thing for amateur radio, at
>least in the USA.

It's four times bigger than it was when I was first licensed, but it's harder to strike up "routine" conversations on 2 meters anymore...Other than being a rough guideline for the government to judge "occupancy" by, I don't think it much matters...

>I would personally prefer to see one-tenth as many

I think there should still be a requirement to have a minimum amount of activity logged at each renewal period.

>But those are just my personal opinions, of course.

And well stated.

It doesn't work that way, Mike. I posed the challenge and it's up
to others to answer...such as yourself.

All the information is available to YOU. Won't take much searching
to find it.

No need for Keplerian tables or that other BS about "picking a position"
since all you need is the MAXIMUM distance for path loss.

Or, you can cheat and crib from NASA information. They've been
in the interplanetary communications business for over three decades.
Theoretical information is even older, and still accurate.

> Tell us what the Doppler shift is over the length of a short QSO,
>starting at the time of of start Assume a DX style QSO with a short
>feedback message to insure actual reception on both ends, say a 35
>second transmission. Then the same for the return message.

Illogical premise. Interplanetary QSOs have such long round-trip
times that your paradigm isn't worth 20 cents. Think about it.

Doppler shift isn't a big problem. RF power output IS. Think about
that...no ionosphere in between planets, nothing else like it.

> At this time I don't know those details, but I'll be happy to check
>them out once you've posted them. Add anything I have forgotten but may
>need to know.

Sorry, Mike. It's up to YOU and the other latter-day saints of see-
double-yew to take the first shot. You are NOT the range officer
in this shooting gallery.

If you can't do it, well, you can't do it. No problem to me. :-)

>TCAS? (now TCAS II)

Yup. MIT did their air testing in a couple of Piper Cherokees in MA.
Lovely picture they had in a magazine flying over the 'Haystack'
radome (unrelated project).

RCA's SECANT was tested first on a hired DC-3, Piper Aztec, in
Mojave in '71. [don't know what Minneapolis-Honeywell used]
USN air testing was in a C-117 (military version of "Super DC-3"),
Grumman S-2 Tracker, and Douglas RA twin jet...the latter sharing
duty of testing the prototype GPSS then called NAVSTAR (or
something like that). In PA, NJ, MD, and FL by the USN. It worked
just fine. So did the Minneapolis-Honeywell system. Would have
been interesting for the '74-'75 "electronic shootout" to see which
system was the better. Not so. U.S. gubmint decided in favor of
a largely untested system devised by highly-credentialled friends.

ATCRBS became TCAS and that was that.

>> Military doesn't use that
>> system. MIT had friends in higher places to sway gubmint opinion.

>Very impressive - thanks for the summary. I'd never heard of the
>SECANT system before.
>
>That would have been quite a challenge back in '74 - all discrete
>components, no microprocessors, no CAD tools or circuit
>emulators....real hands-on design work.

All discretes for sure, lots of prototype PCBs in the first two
versions, all hand-wired on Douglas boards (not the aircraft
company, but a then-new prototype PCB company in SoCal).
All the RF plumbing used mainly SMA connectors and purchased
uW components such as filters, couplers, etc. (we were short on
time and R&D budgets are not extravagant).

But...we DID have some CAE (although it was called "CAD" back then). RCA Corporate had COSMIC, Computer Optimization of Simple Microwave Integrated Circuits, and LECAP, the frequency-domain analysis for any kind of circuitry...a much simpler version of the original IBM ECAP. We did write some of our own programs once we got accounts on the corporate time-share net (second phase). I learned FORTRAN in '72 using Dan McCracken's book on it and eventually contributed six programs to the corporate program library. Was interesting and challenging!

While RCA Sommerville had just debuted their CMOS family and was (half-heartedly) promoting COSMAC processors, they were a bit ahead of time and facing the then-new Intel (and copycat Zilog) CP/M micros for business applications. At RCA EASD we had to produce quickly and went with discrete logic subsystems. Worked out quite well and Bernie Case (not a ham) got at least 3 patents on the threat-evaluation and tracking logic for SECANT, a couple more on RIHANS (River Inland Harbor Area Navigation System), a highly precise positioning system using shore station responders. That was tested in the Galveston, TX, area in '74 (whole group was there for the testing over 4 weeks). Following the NOAA survey team, the positioning accuracy was BETTER than even military GPS of the next decade. All that and massive amounts of multipath reflections from all the steel in dockyards, etc., in harbors. RIHANS worked in L-band also using low power RF pulses; range was only about 30 miles (to radio horizon) and that suited harbor and roads navigation very well. [it was so far back in time that ROMs were limited to 8 KBits of storage...:-)]

Too bad that RCA Corporation was sold to GE and most of the divisions parcelled out to other corporations. Was a heady time, much accomplished in electronics and radio in the 70s, fun days of pushing lots of performance envelopes. Most of the 3-decade-old CMOS ICs are alive and well in production at many other IC makers; Indianapolis division still makes color TV sets under the RCA logo although Thompson CSF owns that division now.

>No wonder you're getting so much heat here, Len - clearly, you are out
>of your league. Are you aware that there are folks here who have
>successfully assembled their own Elecraft kits, and built working CW
>transmitters from plans? <:-) <:-) <:-)

Yes, they've announced (sometimes with herald trumpets) their fantastic Nobel-level accomplishments. Ave! :-)

There remains an enormous area of electronics-radio exploration and experimentation for anyone who wants to venture out from the known, the already-accomplished a half century ago. Technologically and operationally, the rest of the radio world has long-since surpassed even the dreams of most amateurs. There's over 50 Million cell phones in use in the USA and every one of them is a tiny two-way radio running in the low microwave region. That's sneered at by the "radio pioneers" (of the latter-day saints) busy keeping morse code alive and unhealthy

on HF. When every other radio service has either dropped morse code use or never considered it from the beginning, it doesn't say much for the pretend-ubiquitousness of that ancient mode.

It's an exciting future for those who care to break away from half-century old techniques and venture into largely-untried new areas. Only a few dare. That's how it was in the 1920s. By the 2020s it would seem that most amateurs want to recreate that time, to live a century back, and feel "safe" re-inventing wheels because they have all the knowledge recorded, all the successes and the failures of those early days. They can neglect the failures because they never did the same thing.

>
>Even if you adjust for inflation, it was a lot of money for me back
>then.
>Today I'd spring for it.

Back in 1972 my Novice was free, of course, but the upgrade in 76 was $9.
So were the ones to General, Advanced and Extra. (Yes, there was a gap
there...I was in boot and Avionics School from late 74 until spring 76)

>In the late '60s and early '70s I could (and did) build a pretty good
>station for less than $50. CW, of course, but capable of worldwide
>communication.

Of course.

I wonder what the "$50" would be by today's standards...???

>> --- or ---
>>
>> Q2: If it had cost $250 to renew your license each time over your ham
>> radio career, would your license have lapsed by now?
>>
>A2: No. By the time I was 23, I would have spent $250 for a ten-year
>license. But that question is somewhat academic because without a
>license in the first place, renewal would not matter. While coming up
>with $250 in one lump would be difficult, I would simply have saved up
>for it.

I don't know too many folks who do spend "lump sum" for any major
"avocational" expense, whether we are talking about Amateur Radio or bass
fishing.

>There's a bit of marketing psych going on here, of course. Asking
>somebody to cough up seven cents a day or forty-nine cents a week
>isn't the same thing as asking them to pay $25 a year. And asking them
>to pay $25 a year isn't the same thing as asking them to pay $250 for
>ten years, payable up-front.

Of course.

Very few folks would think of sending the League $390 in one lump for 10
years of membership, but they still manage to pony up the $39 year.

>The smart marketer knows that you need to make the initial payout
>relatively small. That's why there was never any fee for a Novice
>exam.

There was never a fee for the Novice so it would entice school kids to get
involved. It worked.

>Hopefully, Hans will submit his proposal to FCC before it's too late.

Hopefully cooler heads will prevail and we will stop innundating the FCC
with assinine licensing restructuring plans that have no more hope of promoting
Amateur Radio than putting pictures of Rodney Dangerfield on cigarettes would
scare people from smoking.

Odds are that kid was in the top 2 percentile of the population.
Maybe we need an age limit to keep such young wippersnappers
under control... ;-) Maybe the new license class' test should
be something that 9 year old kids in the top 20 percentile can
pass, that 15 year olds at 50 percentile can pass, and that
Beavis and Butthead at 25 years old can pass....

BTW, let's make sure that an upgrade from the new class to
tech doesn't take away priveledges, like if you went from
Novice to Tech used to do.

We have that now. An unlicensed friend can use your station
under your supervision now. He doesn't have a callsign, so
he uses yours. That's about the only difference that the
german system has from ours.

>> Why not do like the Germans and create an "operator only"
license?
>
>Because it goes against the Basis and Purpose of the amateur radio
>service as defined in Part 97.

OK, Jim...Please explain to me how having a "student operator"
license would violate ANY of the spirit of the Basis and Purpose of
Part 97...I've read it several times over in preparation of responding
to this post, and I can't find a single thing that would violate
either the spirit of the letter of the law...

>> The
>> purpose of which is to allow a person to operate a radio, but under
the
>> supervison of an experienced operator.
>
>We have that now. A licensed ham is the control operator, and someone
>else actually turns the knobs, pushes, the buttons, talks into the
>mike, taps on the keyboard.

Sure, you can do it that way, but that's not the point now, is it?

We're (supposedly) talking about a new entry license to promote
the service. A "student operator" would not only be cumulative
towards a higher grade license, it would encourge mentorship.

Student operators could be given a certain amount of independence
even, by allowing approved mentors to "sign off" thier card and
operate under the mentor's call, ie: KN/K4YZ. The precedent is already
federal practice for student pilots. Can't solo until the IP signs
you off!

>The words "operate an amateur radio station" have an exact definition
>under FCC rules. It means to be in charge of the station, even is
>someone else does the actual knob turning, etc.

Words written by people can be changed by people, Jim.

Even the Constitution has ammendments.

>> Then after some period of time or
>> minimum operating hours, the "student" is eligible for an upgrade?
>
>Based on what other requirements?

Take a shot, Jim...This was a general discussion...Not definitive
proposals. Let's rehash the previous "Novice license", as it seemed to
work, update the technical standards, and determine where we would
like new operators to be in terms of skill level, then set up the new
license from there...(We are only using the "old" Novice as a
guideline...NOT the standard to set)

>Such a system would essentially require that a prospective ham would
>have to know a more-experienced ham in order to operate. Why do we
>need such complications?

Would it hurt? And you're at least tentatively supporting the
idea of yet another license class...so if you're going to go that far,
go a bit farther and consider ALL possibilities.

The biggest "drawback" to my idea as I see it is that a lot of
folks who are TALKING about Elmering and mentoring would actually have
to do it, and may even have to take a bit of responsibility for it.
Heaven forbid!

And who said this would be the ONLY way to enter Amateur Radio?
There's a lot of folks out there who never operated a day with a
Novice, Tech, General or Advanced licenses...

>> Or why don't we quit wallowing in all this administrative
quagmire and
>> just "get on with it"...???
>
>What "quagmire"? The FCC amateur radio license system today is far
>simpler and more accessible than at any time in the past 35 years.

The "quagmire" of proposals that continue to arrive the FCC,
including the present NCVEC "plan"...

>> As you and I have both pointed out on numerous
>> occasisons, Jim, Gradeschoolers are passing the EXTRA, ergo there's
little
>> validation for a new "entry class" license...
>
>That doesn't mean things can't be improved. Do you *really* think the
>current Tech is the best we can do for an entry-level license? I
>don't.

Why not?

YOU have said that gradeschool kids are passing this test...Then
it can't be all THAT bad! That "entry-level" license already bestows
over 97% of all Amateur allocations with it. Unless you want to
suggest that we cut back privs from the E's, A's, and G's (and
remaining N's) and redistribute it in thirds? (Fourths?)

>What is wrong with the "Basic" license I propose above? If you don't
>like the name, call it something else, but what's wrong with the
>*concept*?
>>
>> Now...if the POOLS were closed and the applicants actually HAD to
LEARN
>> something, there MIGHT be a reason to have a simpler test to get
started
>> with..
>>
>Write up a proposal to close the Q&A pools and submit to FCC. Be sure
>to explain in a convincing manner:
>
> - why this change needs to be done

How can we really expect that the material that is PRESENTLY in
the tests is "learned" when the verbatim questions are public
knowledge>

> - how the pools will be used and safeguarded

I thought I already addressed that, Jim...

Fines and/or prison for the abusers. Period. A new paragraph in
Part 97 that speicifes that the questions are sequestered, and that
publishing them is a violation.

The VEC's can still prepare and distribute appropriate exams.
They can even solicit questions just like they do now...It would just
be illegal to publish them.

> - how prospective amateurs will know what to study without access to
>the pools

Uhhhhh...the same way it was done BEFORE Bash...Study guides with
outlines of the required material...

> - who is going to do all the work needed to make the change

The VEC's>>AND<< the FCC.

> - how the whole system will be protected against "Son of Bash"

Fines and/or prison for the abusers.

> - how all of this can be done without it costing more FCC resources

You mean and not use more resources than they already use to hash and re-hash numerous licensing structure plans?

Most of the "changes" would be in the purview of the VEC's. They need the letter-of-the-law to back them up, which means the FCC would need to little more than get the laws enacted and on the books.

Then do exactly like they've been doing for other Amateur matters...Encourage Amateurs to take care of it with internal programs and then only use the hammer as a last resort.

From the Nashville "Tennesseean", August 11th, 2004

FRONT PAGE, with photos in color..

Has link to streaming audio...I was able to copy NA1SS with HT from downtown Chattanooga...

The story, along with video and audio footage, was on all major TV outlets in Nashville...Especially channel 5...WTVF-TV

So much for the "Amateur Radio isn't recognized by the general press" rhetoric we get from one idiot in this forum...

Begin Quote:

"STUDENTS RADIO QUESTIONS OUT OF THIS WORLD"

By LEON ALLIGOOD
Staff Writer

Whizzing 200 miles overhead, space station astronaut has answers

TULLAHOMA — Mike Boyea took a deep breath and keyed the microphone.

''NA1SS, this is K4FUN,'' he said as more than 100 pairs of young eyes were locked on him.

The elementary school students, kindergarten through eighth-graders from St. Paul the Apostle School in Tullahoma and the Good Shepherd School in Decherd, were scattered on the ground in the shade of green Army tents, sitting on blankets or the grass.

No one needed to be shushed. The scene was as quiet as an empty church. After all, it's not every day that students get to ask questions of astronauts on the international space station, who are whizzing by 200 miles overhead at 17,500 mph.

Boyea's voice interrupted the quiet again.

''NA1SS, this is K4FUN,'' he repeated into the microphone.

The only reply was the scratch of static. No one moved, not even the most fidgety first-grader.

Boyea, an avid ham radio operator and Saturn employee, keyed the mike a third time.

''NA1SS, this is K4FUN.''

From the vastness of space came the voice of astronaut Mike Fincke, science officer on the international space station. The younger kids giggled. The older students beamed.

''We can hear you. Thank you for making this possible. We are ready for the first question,'' said Fincke, one of two space station astronauts and the only American aboard.

For the next 10 minutes, as the space station cruised over the school in a south southwest to east northeast direction, students quizzed Fincke about everything from whether the food is good (Fincke said he likes it but wishes he had a microwave) to the kinds of experiments done on board (he had just completed an ultrasound on his leg as part of a study of the effects of being in space). There also was the inevitable thing every second-grader wants to know: How do you go potty in space? It was Stanton Snead's question.

''I just thought it would be a good question,'' said Stanton, a Good Shepherd second-grader.

Having faced the ''bathroom question'' before, Fincke handled it with aplomb. ''Going to the bathroom is important for every creature,'' the astronaut said. He said he shares a ''space toilet'' with station Commander Gennady Padalka of Russia. Both men are about halfway through their six-month stay.

The outer space conversation was the culmination of three years of work on behalf of two ham radio clubs, the Stones River Amateur Radio Club and the Middle Tennessee Amateur Radio Society. Yesterday's conversation with the space station was the first time for a Tennessee school, according to the Amateur Radio International Space Station, a ham radio group.

''It's a rather involved process to be able to get permission to talk to the space station,'' Boyea said. ''We put our name on the list and just waited. Earlier this summer we got word that our time was coming up.''

Janice Copeland, a science teacher at St. Paul's, said she learned of the space talk appointment about a week before school started.

''It was really special for our kids. We thought we might get to do this last year, but it fell through,'' she said.

John Oosting, an eighth-grader at St. Paul's, said the experience was better than he expected. ''I thought it'd be all scratchy and everything, but you could hear him fine. It was real clear,'' he said.

For Boyea, who works for Saturn at the Decherd engine assembly plant, yesterday's connection with the space station was a dream realized.

''When he answered me, I think my heart skipped a beat. It was amazing,'' he said.

Hi Robert...Not quite...If I understand correctly (and I admittedly don't have all the answers) an approved "student operator" can operate approved club stations after an aprpentice period.

As I suggested to Jim, perhaps approved "mentors" would supervise "student operators" and allow them, after being "signed off", to operate ie: KN/K4YZ

Unfortunatley, Dan, tax revenues don't always cover the expenses.

"Fee-for-service", unless we move to Swedish-like tax levels, will become
much more prevelent.

Our "not-for-profit" status notwithstanding, it still costs money to
administer the program, issue licenses, enforce regulations, etc. We shouldn't
expect other radio services to pay our way any more than we'd tolerate having
to pay for thier operations!

No other radio service pays for our licenses. The FCC budget comes out
of the Treasury Dept's "General Fund", not from fees collected.

Good luck on this one now!

To say the least. Compter programming was pretty mystical back then.
My exposure to Fortran came in college in '76 - the computer was an
old Burroughs B6700 (IIRC), and was absolutely massive.

>

It's too bad that RCA was not equipped with a some sort of financial
TCAS system when they took on the development of the analog VideoDisc
system..... :-0

> the pretend-ubiquitousness of that ancient mode.

It was once a mainstream form of telecommunications - but that was a
long, long time ago. Now, it's an interesting mode within the amateur
radio hobby. and the odd covert military organization, perhaps.

And Hollywood!

I was an AMTS at the old RCA Sarnoff Lab in Princeton from 81 to 87.
Got 11 patents there. Mostly television signal processing. That
ended when GE raped and pillaged RCA about 15 years ago.... :-(

These were exactly the points made by the ARRL to convince the FCC
to not charge license fees when fees were reinstated.

>We use the public airways.
>We are the public.

This applies to commercial/business users as well.

>I was under the impression that all the employees of the FCC were payed by
>tax monies.
>So why should we pay them twice for the same job?

This makes no sense. How does charging a license fee result in an
employee being paid twice (much as I would have liked to have been
paid the going industry rate which was double what I was paid....)?

Ditto for myself in 1958 or even as I renewed my license while
serving in the Navy. I think the issue needs to be what is a reasonable
amount that doesn't act as a roadblock to youth or those on
limited incomes.

> > --- or ---

Taking your poll at it's face value I would never in this world have
been able to come up with an inflation-adjusted $250 spot cash back
for a ticket back when I got mine. A drop-dead one year Novice
ticket?? How would that have worked?? I was a teenager with just a
paper route for income and you can bet there were both kids and
retirees out there who would have had the same problem.

> --- or ---

Part of RCA Corporation's profit problems came in trying to
compete with IBM's 360 series with the RCA Spectra 70 series.
While the Spectra 70 had 12% of the mainframe market, the
east coast major part of RCA's computerwerke didn't upgrade
it with newer hardware all around. When IBM debuted their 370
series, that was IT. [RCA EASD made the terminals in Van
Nuys, CA...not a single ROM in the monitor...characters were
done via a special RCA tube with "mini-scanning" for them and
the keyboard was a modified IBM Selectric...:-)]

By contrast, EASD had 2 Spectra 70s on the first floor of my
group's building, right next to the group lab. Since a time-share
connection hardware set cost (then) $50K, we had to dial-up
Cherry Hill, NJ, and connect to the corporate computer the very
long way around. Seemed silly at the time...the terminals were
on the second floor of the same building. Well, the two mainframes
made money on contract computing in the mid-70s, having two
shifts busy, busy, busy. [blazing speed of 300 Baud on the

corporate net using video terminal or 100 WPM on the Teletype
KSRs...and file space limited to 256K bytes...:-)] Group and
Commercial Aviation section got together to contract with
Tym-Share for better, faster service via Ann Arbor, MI, and
dial-up.

By contrast, this H-P Pavilion "low end" box (just purchased)
does CPU clocking at 2+ GHz, 200 MHz data-memory fetch
rate, 40 GB HD, and CD R-W deck. Modem can do 56 KBPS
but lines limit that to about 49 KBPS on the average. Fabulous
operation at those clockings! My own FORTRAN-developed
programs (originally via a 20 MHz CPU clock machine) hardly
indicate any hiccup in excuting masses of calculation. The
Samsung 712 LCD flat display has NO distortion of the image
and NO focus problems...as were starting to show up on the
6 1/2 year old CRT monitor before its horizontal sweep couldn't
take it anymore.

>microprossessor system way back when....

Heh! 4-bitters! Actually, those are alive and well in the Microchip
PIC microcontrollers...dozens and dozens of versions at very low
cost and the PIC development program is free for download!

Even with working for Rockwell, we didn't think much of the little
4-bitters there, running Intel micro development systems for the
then-new 8051s. CP/M was king in PC circles until the Apple][
started to edge in...and CP/M pretty much evaporated after the
IBM PC debut at the beginning of the 1980s.

I was most surprised that they didn't push that at the time. Under
the older Sarnoff they went push-push-push on broadcast quality
videorecording and broadcast equipment in general. Their cameras
set the standard for TV shooting. Jim Hall, KD6JG, was into their
first TV recording efforts in the 1950s.

Good for you! Fascinating work, always something new coming
up, pushing the performance envelopes farther and farther out.
Transistor f_t limits are now beyond Ku-band (18+ GHz) and
increasing. Direct-conversion cell phone receivers at 1 GHz
and 2 GHz...unthought of two decades ago!

>> When every other radio service has either dropped morse code

"Hollywood" makes its money on emotions and fantasies. While
it might be good entertainment, it is waaaayyyyyy to far out for
anything like reality.

PCTA seem to make their thing on emotions and fantasies, too!

>> It's an exciting future for those who care to break away from half-century

>Everything old is new again!

Retread and (sometimes) retard...

It's sometimes like a living U.S. Civil War re-enactment...old-fashioned
weapons, old-fashioned clothes, old-fashioned tactics, but both sides
DID have telegraphy! [whoopee for the morsemen]

A half century ago, the U.S. military was NOT using any morsemen
in long-distance 24/7 net communications. [that net was considerable
and massive, far bigger than what State Department had] All these
mighty macho morsemen in here just can't understand that. The fairy
stories they were fed by "the league" by other morsemen. Keeps the
re-enactment "alive" even though it is brain-dead.

Beep beep.

>I was an AMTS at the old RCA Sarnoff Lab in Princeton from 81 to 87.
>Got 11 patents there. Mostly television signal processing. That
>ended when GE raped and pillaged RCA about 15 years ago.... :-(

General Electric did no "raping and pillaging" as far as this
former RCA employee is concerned. RCA ran into red-ink
problems and couldn't sell enough products or get enough
development contracts to stay profitable. Some divisions
suffered "old fart-itis" and couldn't compete in marketplace
items. NBC did good, so did a little CATV division in Burbank
close to the West Coast NBC Hq, so did Space Systems in
New England someplace, and the Indianapolis TV production
(color only, B&W was farmed off-shore as early as '74). EASD
in Van Nuys was hanging in there with great commercial
aviation radio and radar, electronic warfare stuff, but stuck with
the old old computer terminal designs for production.

Almost ALL of the old CMOS ICs done by RCA (masks and
all) are alive and well, made by other companies who purchased
the masks and rights. That's a tribute to technological innovation.
Considering that National Semiconductor sold nearly ALL of its
old logic and analog designs to Fairchild in 1998...and Fairchild
(as well as others) just chopped off some of the slow-moving
ICs, that should be a lesson.

The consumer electronics marketplace is a cruel mistress. Today
I can drive to the giant Fry's supermarket (on the other side of BUR
just 5 minutes away) and buy a 19" color TV with a built-in DVD

deck for under $200. Ralph's supermarkets (the food folks, not the electronic toys for adults) is now selling a dual-deck DVD-VHS thing for $300, records from VHS to DVD as well as vice-versa. DTV is starting to come on strong in the consumer marketplace and its whole circuit collection has little resemblance to the NTSC oriented analog TV.

As a consumer I think that is wonderful! If I was still in the solder-slinging electronics biz I'd be wondering when my lay-off was coming as American production is becoming less competitive with foreign companies. Hard facts, but facts we have to live with.

As a former RCA employee, I have little but overall praise for the Van Nuys division and my 8 years there were fabulous, filled with all kinds of good stuff on development, innovation, etc., etc. But, the handwriting on the wall was prominently displayed from 1973 onlwards, both from reading between the lines in the RCA Engineer and heard from rumors on the telephone tie-lines with NJ. That's the way things sometimes go...and my group got let go en masse in November 1975.

It's the most logical way to do it. Vanity call fees are for ten years, all in a lump.
>
>Part of the reason the FCC license structure is at "10 year" intervals
>now is that it's too expensive otherwise.

Yep. And it's been that way for 20 years. Not going to change - in fact, I would not be surprised if FCC went to 20 year license terms. Or even lifetime, with some sort of tie-in with your SSN so they could cancel the licenses of SKs.

>You get all those Amateurs chipping in
>$25 a year for license every year and watch how fast they'd change THAT.

I don't think they'd change it at all. Why should they? So they can get *less* money?

>But there are very few people who CAN'T drop $25 right now for some
>recreational purpose.

Maybe. But that's not the question. Do you really think FCC would go to annual collection? I don't.
>
>Most of us are spending about that much A MONTH for ISP service...More
>for broadband...So P L E A S E don't try THAT tact, Master Chief. It's baseless.
>
I think you mean "tack".

And there's a difference. ISP service is considered a necessity by many, and one account is often used by the entire family.

A ham license is specific to one person.

>Furthermore, one only need see that the manufacturers seem to be
>confident
>enough in the financial solvency of the Amateur Radio program in order to do
>R&D and subsequently manufacture radios that START a $1500, now as high as

You can get a lot of rig for a lot less than $1500.

> Now...if people can afford alcohol, CD's, cigarettes, XBox's and other
>"recreational" pursuits, they can also manage to prioritize $25/year for
>Amateur Radio if that's what they want to do.

Maybe. But humans don't always behave that way.

About 20 years ago I knew a ham who was a serious smoker. He and his wife each went through 2-1/2 to 3 packs a day. These folks bought a couple of cartons at a time.

He used to cry the blues to me that he didn't have any money for ham radio, the rigs were so expensive, etc. etc.

One day I suggested to him that he cut down on his smoking by a pack a day, and put the money saved into a ham radio fund. I didn't say he'd have to quit snmoking, just cut down.. At 1984 prices, that would have put about $500/year in his ham radio budget, which, combined with what he already had, would have built a nice station in a year or two.

He looked at me like I was seriously deranged. No way he'd cut down at all.
>
>And if THAT is not good enough for you, Hans, we'll get Congress to allow
>prorated license fees based on their tax returns.

Who would do all the paperwork?
>
> Or is there some other argument you'd care to pursue?

Simple: We used to have fees. They didn't go to help amateur radio or the FCC. And they wouldn't do it again.

I'm *not* against a reasonable fee. Say, $25 max for ten years, waived if the ham is under 21 or over 65 or disabled.

> course, it does rule out a lot of boat anchors, but c'est la vie.

Now all we have to do is remove ALL things that run over 30 volts from
the "new" Hams presence, eh?

When most of us have a CRT running some thousands of volts sitting
right in front of us, and well over 100 volts going into our power
supplies and at every outlet in the house, and are our antennas going to
follow that rule?

Besides, if we were to be interested in safety, we would limit the
current. The limit should be set at the maximum safe level

>> The National Electrical Code (NEC) considers 5 milliamps (0.005 Amps) to be a
>> safe upper limit for children and adults hence the 5 milliamps GFI circuit
>> breaker requirement for wet locations.

Interested in safety? There is the limit. Learn it, love it, live it.
Sorry, but the idea isn't smart.

No kidding, huh...?!?!

I didn't say anyone did, Hans. I SAID that we would not want to pay for
any other services fees anymore than they'd want to pay for ours.

Please provide the quote where I said anything different.

I SUGGESTED that we may need to accept the idea of "fee-for-service"

>Good luck on this one now!

What luck to do I need, Hans?

I didn't make the comment you suggested I did.

Why don't you focus on what IS said, rather than trying to find something
you can whip into an argument...?!?!

Good luck on THAT one now!

>a lump.

It is? Most logical to whom? Most other "professional" fees are for
three or five years.

It's only "most logical" since it's the way things are now.

Electronic fund transfers and ULS make it possible to do this yearly
without any other human interaction, if yearly was the period decided upon.

>>Part of the reason the FCC license structure is at "10 year" intervals

Ten year licenses came about since it was financially burdensome to do the
administrative functions on a radio service that it does not pay fees.

>collection? I don't.

OK...then two, three of five.

Again, with the high degree of automation that is occuring, it wouldn't
take a lot of effort to implement a system that "cancels" a license if an
on-line renewal with payment is not received.

>>Most of us are spending about that much A MONTH for ISP service...More
>>for broadband...So P L E A S E don't try THAT tact, Master Chief. It's

Thank-you for the correction, but it still doesn't negate the validity of
my assertion...His TACK is baseless.

>And there's a difference. ISP service is considered a necessity by many, and
>one account is often used by the entire family.
>
>A ham license is specific to one person.

And an adjusted "multiple licensees" fee could be arranged.

As for the "entire family" argument, most of the popular ISP's are around
$21 to $50 a month, depending on whether you have dial-up, broadband , etc.

I'll just go cheap and say it's $25 a month. That's $300/year. Divided
by the typical family of four, that's $75/year.

You're suggesting that (if we assume only one licensee in the family) the
one licensee in the family can't afford an extra $2.08/month? That's a Coke
and a bag of chips once a month for liberal acces to the electromagnetic
spectrum...?!?!

>>Furthermore, one only need see that the manufacturers seem to be
>>confident
>>enough in the financial solvency of the Amateur Radio program in order to do

>
>You can get a lot of rig for a lot less than $1500.

Sure you can.

But the argument here is that a license fee would preclude folks from
getting involved in Amateur Radio, Jim.

I'm pointing out that the fees we are suggesting (around $20-25/yr) is
inconsequential in the overall scheme of it.

>> Now...if people can afford alcohol, CD's, cigarettes, XBox's and other
>>"recreational" pursuits, they can also manage to prioritize $25/year for
>>Amateur Radio if that's what they want to do.
>
>Maybe. But humans don't always behave that way.

Oh...

OK.

So we are going to trivialize Amateur Radio to the XBox.

His bad, Jim.

So we again trivalize the Amateur Radio service so we can accomodate the
FEW who prefer to toss the monies away on beer, broads and booze...?!?!

That's stupid. People will make the decisons they make based upon thier
own needs, interests, etc. If Amateur Radio "needed" to incorporate
fee-for-service licensure, then there would be SOME Amateurs who would need to
evaluate what was the greater priority.

So far you've not offered anything that would really be a valid impediment
to fee-for-service.

>>And if THAT is not good enough for you, Hans, we'll get Congress to allow
>>prorated license fees based on their tax returns.
>
>Who would do all the paperwork?

I answered that already, Jim.

>> Or is there some other argument you'd care to pursue?
>
>Simple: We used to have fees. They didn't go to help amateur radio or the
>FCC.

>And they wouldn't do it again.

Sure they would.

Just like they enacted and incorporated regulatory changes to accomodate volunteer examiners, if fee-for-service was deemed a necessity, the feds would see to it that the necessary changes made it to law.

>I'm *not* against a reasonable fee. Say, $25 max for ten years, waived if the >ham is under 21 or over 65 or disabled.

That wouldn't pay for the cost of administering the service on a pay-for-service system, Jim.

Nope. Just giving an example of how people behave. This guy wasn't stupid or uneducated.

btw, he's been a radio maintenance person (I don't know the exact MOS) in a branch of the US military. Took care of RTTY setups and was good at it.
>

Right.

Now write up a proposal to make it happen. Like the one to close the pools.
Then sell it to FCC.
>

It wouldn't? How much would?

If too much of the fee just goes to collecting the fee, what's the point?

Since "MARS >>>IS<<< Amateur Radio," I should be able to get on QRZ
and look up my old region 3 MARS call sign and see who it has been
assigned to since resigning four years ago. I might try to get it
back via the vanity call system. Hi, hi!

So...You are suggesting that kids who can afford $100 for an XBox and
who-knows-how-much for the additional software programs for each game
couldn't/wouldn't spend some unspecified amount for an Amatuer license...?!?!

Sorry Jim, but that's assinine.

If they will spend almost 2 C-notes for a video game "taht they
want"...Why wouldn't they spend $25 (or less for an "under 21 person) for an
Amateur license that they would necessarily have to want also...?!?!

Marketing psych ? Well, if that's the choice or
even if I just had to pay 10 cents per month to renew my
ham license, I'd let my callsign lapse. Just not worth it as
there are many better things / hobbies to waste money upon
besides ham radio. A casual listen to the daily Net
'boredom parade' on 40M will convince anyone of this.

Sounds to me like this scatterbrained idea to
charge $250 fee for a renewal is almost as bad
as the dry-drunks at ARRL which gave us "Incentive
Licensing" in the 1960's, from which ham radio
has never fully recovered. (even with code requirements
being relaxed, you still don't see young people comming
into the hobby anymore, this should tell you something....)

There are probably better ways to make a poll like this, Hans. Your poll tips all off to your opinion, and won't allow for a good answer from the pollees. (is that a word?)

Since opinions vary in intensity even among people agreeing on a subject, it might be better to use a agree disagree scale with say 5 possible answers:

Q1. The Ham license fee should be $250 for a ten year period.

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q2. I would support a $250 Ham radio license fee if it was tied to increased enforcement

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q3. I would never support a $250 Ham radio license fee.

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q4. I would pay $250 for a ten year Ham license.

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q5. A ham license is worth $250 for a ten year period

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q6. $250 is too much for a 10 year Ham license.

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q7. If the fee for a Ham license were $250 for a ten year term, I would allow my license to lapse.

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q8. I would prefer to pay for a $250 license fee once every 10 years, if it was the case.

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q9. Paying for a $250 license fee at the rate of $25 per year is the best way of financing the fee, if it was the case.

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Q10. There should be no license fee, ever

A - Strongly disagree
B - Disagree
C - Neutral or don't know
D - Agree
E - Strongly agree

Then allow a section for comments.

This way you'll get your answers, but without tying the person to a digital yes/no response. Digital responses are usually way too broad to be of much use.

My response to this new poll would be:

1 - C
2 - D
3 - B
4 - E
5 - E
6 - D
7 - A
8 - A
9 - B
10 - B

So this puts me down as a person that is neutral on the idea of a $250 dollar fee, but would support such a thing if it were tied to increased enforcement. I'd never say I would never support such a fee. I think the fee is too much, but would not allow my license to lapse if the fee were that much. I'd also prefer to pay the fee at once, rather than spread it out. And I'd never say there should never be a fee.

Or to answer your poll:

1 - yes
2 - yes

So is your $25.00/year suggestion. The FCC has calculated that it costs $20.80 to process a ham license transaction (see current vanity call fee), so the net revenue from each yearly renewal would be $4.20 at current labor rates. Great idea!

I suspect the majority of US hams were not licensed when incentive licensing was introduced. After all, it's been 35 years, and the various layers of simplification have brought in many new hams.

I suspect the whole thing about incentive licensing is overblown.

How did incentive licensing damage the inflow of young people to the hobby? It was the already licensed hams who grumbled, and who lost anything.

Consider that all the changes made over the 35 years to make it easier for people to come into the hobby (and we've seen similar changes here in Canada in recent years) may have the reverse effect when it comes to young people. Maybe the tests, code and theory, that are so much a burden for the older person coming into the hobby were not an impediment to the young. They thrived on it, and at a young age, it was a boost to be able to pass the test when older people were griping about how hard the test was. When I passed the test in 1972, at the age of 12, it was no drag to be able to accomplish that. It was practically like snapping my finger, because what was in the test interested me, and it was not merely an obstacle to overcome before I could start yacking on the radio. If you're ten (which is when I first set out to learn the code, though I did not go about it properly), or eight, you're young enough that being able to understand a "code" of some sort is picking up a secret language that those around you don't know; that's incentive in itself to learn it.

But, all the changes have been made by middle age men, or older, who often seem to have forgotten what it was like to be young and get their first ham license, or who came into the hobby in later years. They are making judgements based on being middle age, which may not reflect what it's like to be young.

For that matter, too often the mistake when talking about getting newcomers into the hobby is that quantity is the necessity. If only we can get big numbers, then we're safe. But in trying to lure those numbers, the

pool gets watered down. The hobby is no longer a technical playground, it's no longer a place where kids can play and grow up, either into technical pursutes or just adults who have a better than average familiarity with technical matters (a rather important thing, given how much more technology we're surrounded by compared to thirty years ago). There is plenty I learned from amateur radio that have nothing to do with technical matters, but it comes from being part of a not just for children activity when I was still what amounted to being a child. Maybe in watering down the entrance requirements, the hobby is not bringing in those who would benefit from the hobby, as they traditionally would have. "It takes nothing to get into the hobby, what possible appeal could there be?" Once things have started down the slope of making it easier to attract larger numbers, then there is no alternative but to seek even larger numbers, because then the only thing you do have is those large numbers. Gone are the benefits of amateur radio, to the actual hams and to society at large, and there goes any ability to justify the frequencies except by large numbers.

And getting back to the middle age men, it is they who keep repeating the mantra "how can amateur radio be appealing in a world where every kid has a cellphone and a computer?". So long as competition with society in general is the pivot point, then of course there can be little appeal to the youngster. Only by promoting the hobby's strengths and uniqueness can one hope to compete with superior forms of communcation.

For a VANITY application that requires a specific intervention to enact.

If we assume that the FCC would, in a fee-for-service program, have the
appropriate software to allow direct paynet, that "$20.80" fee would drop
drastically, Hans.

>Great idea!

As for a "great idea", no I don't like the idea of a fee-for-service
myself UNLESS it ensures better service from the agency to whom the funds are
going. And your SAC assumes that no other changes were enabled at the FCC in
the process...I have clearly stated that changes would need to be made.

Any more insulting insinuations today, Hans?

Amateur Radio has always appealed to a certain few, and those who are
interested in radio for radio's sake...not necessarily as the fastest way to
communicate or the most efficient.

I imagine it will always be so...

>Awwww gee, Captain Obvious, ya figured it out!

Then why don't you just ask people if they agree with you, rather than suggest it's a "poll"?

>Kinda like your leading
>question as to whether we should "trivalize the Amateur Radio service
>so we can accomodate the FEW who prefer to toss the monies away on beer,
>broads and booze?"

Quoted out of context...Again, I'd expect nothing less, Hans.

Jim Miccolis made a SPECIFIC reference to a person he supposedly knew who was addicted to tobacco, and suggested in his post that his friend would rather spend money on his addiction than divert the money to Amateur Radio.

I ask, would YOU trivialize Amateur Radio just to accomodate a few who would have to choose between Amateur Radio or purient addictions?

>Sunuvagun!

Sunuvagun yourself. What "point", other than proving you can quote out of context, do you think you have made? If it was to try and appear antagonistic rather than objective, you did it in spades.

>72.5

Again, once more with not quite enough...Why am I not surprised?

I believe Mr Black wasn't licensed during the Incentive licensing time.

> I suspect the whole thing about incentive licensing is overblown.

Completely.

> How did incentive licensing damage the inflow of young people to the
> hobby? It was the already licensed hams who grumbled, and who lost
> anything.

It didn't. All new Hams are products of the time they become Hams. I
don't have any personal experience with incentive licensing or Novice
class or 13 wpm Morse code or 20 wpm Morse code. All I have is the
experience of going through the ranks from 1999, culminating in being a
"Nickle Extra".

I have never failed to be impressed by the ability of middle aged and
older men to become *incredibly* angry about so many seemingly trivial
things.

"The Morse code test is gone, and next we'll be forced to worship Satan
and vote Democrat!" ;^)

>
> And getting back to the middle age men, it is they who keep repeating
> the mantra "how can amateur radio be appealing in a world where every kid
> has a cellphone and a computer?".

I hear this, and I wonder how there can be any competition between
these? Ham radio is about radios, communications without wire around the
world and locally. It's about making radios and accessories and antennas
and the like. Cell phones are about ordering pizza and talking to people
on the telephone. Computers are things that you buy at circuit city or
best buy and plug 'em in and dial up the internet and really aren't

technical. The people using computers that are closest in personality to Hams are the young hackers that write scripts and virii. We don't want them, thank you very much!

> So long as competition with society in
> general is the pivot point, then of course there can be little appeal
> to the youngster. Only by promoting the hobby's strengths and uniqueness

From today's ARRL DX Bulletin ---

Operations approved for DXCC credit: Effective immediately, the ARRL DXCC Branch will accept QSLs for operation taking place in the Somaliland (northwestern Somalia) and Puntland (northeastern Somalia) autonomous areas as well as the southern and central areas of Somalia. Operations possessing written permission from any recognized authority that is acknowledged to be in control of a particular region will be accredited. These QSLs will count for the Somali Democratic Republic (Somalia). QSLs for past operations will be accepted where proper documentation has been submitted.

The last 5 words may be key.

What say, Brian?

> >radio should best be regulated.
>
> Poor baby. Feeling a chill from the possibility that FCC might
> change regulations and remove your brag raison d'etre about
> mighty macho morsemanship and amateurism?

Poor Leondardo. Whether the regulations are changed, you'll still in no
way, be involved in amateur radio. If the regulations governing U.S.
amateur radio are changed, I'll still be proficient in the use of morse
as well as a number of other modes.

> You are snarling (with fear) in the dark of the graveyard, robust
> oberst.

"The dark of the graveyard"? "Snarling"? "Fear"? Are you out of your
cotton pickin' mind?

> You do NOT enforce any regulations.

Nope. I operate under them. You neither operate under nor enforce
amateur radio regulations.

> You do NOT make any regulations.

Nope. I operate under them. You neither operate under nor make amateur radio regulations.

> Quit trying to pretend you are some kind of
> "official authority" on who can do what. It looks so silly...like
> some schoolyard bully trying to "enforce" his way of thinking
> on all the kids...

The kids are all radio amateurs. You aren't. Quit trying to pretend that you are some kind of "official authority" on how amateur radio should be regulated. It looks stupid. What are you--some kind of schoolyard bully, trying to force your way of thinking on all the kids?

> You do NOT present a pleasant picture of U.S. amateur radio,
> trying to "enforce" it like it was some kind of national service
> rather than a fun hobby.

You don't present *any* kind of picture of U.S. or any other country's amateur radio.

> You aren't "leader" and the hobby isn't
> some paramilitary "service" of macho fighting men.

In addition to not being a leader, you aren't involved in amateur radio anywhere on the planet. That is evident from your silliness about "paramilitary".

> Give up the territorial imperative of MAKING all others Do As
> You Did...just because You Did It.

Not only have I not issued an imperative, I've never made a claim that all others should do as I did. In fact, I've stated quite plainly and quite often that it is impossible for newcomers to do as I did. The regs have changed a number of times. So there isn't any "just because I did it". Now, don't you look silly?

> You don't own that right.
> You don't even have that right.

It would be nice if your earlier rant hadn't been shot down by a beam of fact.

> The rest of us citizens enjoy the freedom to comment on federal
> regulations and - AMAZINGLY - the power to petition for changes
> in them! Sunnuvagun! How about that?

You've petitioned. You've commented. So far, nobody in authority is doing much about your petitions and comments. As to "Sunnuvagun", you cribbed it from Hans Brakob and he stole it from Cass WA6AUD.

> Why are you so bloody insistent on trying to withhold that RIGHT
> from your fellow citizens?

Your RIGHT is intact, as pointed out above. I'm under no obligation to agree with you, refrain from laughing at you, to take you seriously or to keep from pointing out that you have some really stupid ideas.

You see, that would interfere with my rights.

I'm with you on both questions, Brian. Besides, I figure those charged
with administering and enforcing amateur radio are already drawing a
paycheck. Aside from Riley Hollingsworth, those who are charged with

amateur radio testing are already getting a free ride. Let the no-loads have a go at doing what they're supposed to be doing. Why should radio amateur volunteers do their work for them?

The license fees collected have no relationship to the "salary and
expenses" portions of the FCC budget. In fact, it works in reverse.
The Vanity processing fees do not go to the Commission, but the work
of processing them gets done by regular employees as part of the job.
It's just another siphon from the public's pocketbook invented by The
Congress. The FCC was very happy not having to collect and process
fee payments in the decade or so when they were suspended.

>Aside from Riley Hollingsworth, those who are charged with

If you are referring to the former field office examiners, those
positions were abolished in the early 1990s after all amateur and
commercial examination functions were privatized. The employees
affected either retired, were transferred to other open clerical
slots, or were RIFfed in the Great Debacle of 1996. The examiner at
my office became the office secretary when the former secretary
transferred to another agency in 1991 but retained the tail-end
examiner work until the privitization was finalized.

As I have stated here quite often, I am in favor of the FCC
"unprivatizing" the examination function, but the chances of that
happening are somewhere between none and zero.

Not at all, Mike - some engage in heated discussion and stand by their
beliefs, others enjoy starting them up then running away - sorta like
Usenet arsonists......well, you know the type :-)

>
> Actually, my point was that if we're going to bust Jim's chops about
>what appeared to be an error on his part, *we* should be able to back up

Well, he is traditionally the first one to jump on someone for 'being wrong' about something - anything, actually, no matter how trivial - and often only in his own opinion at that.

Which is unlikely - he's made too many enemies with his "You're just wrong. I'm always right" attitude in the group for that to be an option.

It is interesting to see the reaction when the tables are turned. You know that if he had have popped in and said "you're right, guys, I screwed up", this thread would have died out. Apparently, and quite unfortunately, that isn't possible for him to do - so he avoids the issue, and hopes it goes away.

Like the old saying goes, "if you can't take it, don't dish it out" !

He's reading this thread, though - he knows it's here. When the time is right, he'll jump in and try to take control of it - just watch! Meanwhile, he's out there today regaling us with his wisdom on the subject of license fees, and other matters.

And reading.......

>rather spend money on his addiction than divert the money to Amateur Radio.

I think *I'm* being quoted out of context there...

My point about my smoking friend was that, in *his* value system, smoking a lot took higher priority than saving up for a ham station. Part of this was no doubt addiction-fueled, but another part was that he even though he bought 'em by the carton, his cigarette expenditures were relatively small, relatively frequent purchases. If he had to buy a year's worth of smokes all at once, he might have quit.
>
>I ask, would YOU trivialize Amateur Radio just to accomodate a few who
>would have to choose between Amateur Radio or purient addictions?

How is Hans' or my opposition to license fees trivializing amateur radio?

<wa2ise@ix.netcom.com> writes:

>Makes you wonder why that videodisc system bombed, but DVD
>succeeded. Other than being "digital" they are not that
>different...

When the various videodisc systems appeared, they all shared some common weaknesses. They couldn't record, they and the discs were big and expensive, the selection of movie titles was very limited. Most of all, you had to buy the discs.

The first VCRs were a success primarily as a way of time-shifting favorite programs, avoiding commercials, and building up a library of favorite programming. The popularity of VCRs created the video rental store industry, which meant that you didn't have to buy every movie you wanted to see.

Then mass production and changes in the movie industry reduced the cost of tapes, so that buying them became only a little more expensive than renting.

Meanwhile, the music industry went from vinyl records to CDs and cassette tapes.

So when DVDs appeared, the market was more than ready for them.

When my early 1980s CD player finally gave up the ghose some time back, I got a player that does both CDs and DVDs. A twofer.

>No porn avaliable may have had something
>to do with it ;-)

Actually that industry was greatly affected by the invention of camcorders, VCRs and now DVD players. A friend of mine says that much of modern electronics, from computers to digital cameras to the internet, is heavily driven by that particular industry. He has a whole list of humorous translations of various modern acronyms.

Q1: If it had cost $250 for the 10 year license when I first entered ham radio, I probably would not have done so for I had no basis to determine whether the activity would appeal to me. Initially, it was just something that I did to participate in my husband's interest (now ex-husband).

Q2: I would have renewed but complained loud and long about it. Having learned that ham radio was something that I actually like, I would not give up my license for anything.

Since entering ham radio, I've belonged to my local club in the various areas that I've lived, became a VE, taught upgrade classes, participated in special events, entered contests, been a club officer and many other activities. Both I and the clubs to which I've belonged would have missed a great deal if that first license had been $250.

The only enemies I know of here are people who have a problem with my
differences of opinion, or with being corrected when they make a mistake.

Would you rather I let the mistakes I notice go uncorrected?
>
>It is interesting to see the reaction when the tables are turned.

Yes, it is.

>You
>know that if he had have popped in and said "you're right, guys, I
>screwed up", this thread would have died out.

My original post began "if my math is correct". One of the calculations was
quite close (188 seconds) but the other was way off. So I corrected it.

>Apparently, and quite
>unfortunately, that isn't possible for him to do - so he avoids the
>issue, and hopes it goes away.

Did you miss my correction post?

>Like the old saying goes, "if you can't take it, don't dish it out" !

Dish what out?
>
>He's reading this thread, though - he knows it's here.

I read most threads here. But not all posts. Just don't have the time.

I try to be assertive but not aggressive. That apparently infuriates some
people. Particularly when they cannot refute or disprove my facts. Or when I
refuse to back down from my opinions.

>When the time
>is right, he'll jump in and try to take control of it - just watch!

How can anyone "take control" of a thread? I'm not the most frequent or verbose poster here by a long shot.

I simply post facts and opinions. And the occasional mistake. Which I have corrected.

So what's the problem?

>Meanwhile, he's out there today regaling us with his wisdom on the
>subject of license fees, and other matters.

Are any of the facts I have written about license fees incorrect?

Are my opinions on license fees somehow unacceptable because of a calculation mistake?

Would you approve of me more if I behaved like Len, "William", or Steve, rather than myself?

Would you rather I just shut up?
>
>And reading.......
>
And posting.

Dear dilly Mike,

What's your beef about "busting chops?" You opening a meat market?
[specializing in ham stakes for ham burghers?]

Hello? Newsflash: Rev. Jim MADE AN ERROR IN MATH. Nothing
major. He no work for NASA, not IN space. Not life critical.

Was simple matter to reach up for Almanac, go to page with basic
planetary data, find minimum and maximum distances Earth to Mars,
then use calculator to divide that by approximate speed of light. NOT
a tuff thing at all. Simple.

He got corrected. Correction corroborated. Where's the beef?

[do you know the basic cuts for chops?]

Is this some kind of IMAGE thing with you PCTA? You all have to
be "right" even when you are wrong?!?!?

You want Flame War over trivia? Go fight with Alex Trebek on
Jeopardy and against Ken Jennings.

Or work hard on your morsemanship, be a "real" ham!

Recreate the past, do it again, and again, and again until you get
it right!

>Bad branch water. Angus steers upstream.

Must be a LOT worse than that, Brian.

Das robust oberst from das Amatur Schutz Staffel now thinks I'm
a "beginner" in radio! He NOT thinking right...

Yeah, like beginning in 1953 at a large transmitting station, larger
than what State Department had anyplace (and ADA was only the
third largest in the Army network), plus doing the VHF, UHF, and
microwave radio relay equipment operations and maintenance.

Then "beginning" in civilian life in 1956 in the broadcast industry...
with a commercial ticket (achieved in one sitting at an FCC field
office).

Then "beginning" in aerospace in late 1956 by moving out here and "beginning" a new life in electronics corporations of a national reputation. [he must not think that Rockwell or RCA were "reputatble" enough for him...ptui]

Poor portly old ham Davie must be of the dipsnit frame of no mind that ham radio operates UNDER DIFFERENT THEORY THAN ALL OTHER RADIO...or possible that HAM RADIO IS SO *MUCH* MORE COMPLICATED THAN ANY OTHER RADIO!!!!!

Worse yet, he's all hung up about TURF...the territorial imperative of humans that must be ultra-strong in His glorious magnificence! He OWNS ham radio. HE and only HE can decide who does what where with which.

A regular Smokey the Boor - "Only HE can put out newsgroup fires!" [by trying to stifle all discontent, leaving him and PCTA cronies - or coronaries - as survivors...]

I just "begin" each day with the Jimmy Durante philosophy, "Ya gotta start off each day wid a sonnnnggg..." The rest follows okay.

Oberst Smokey apparently didn't "begin" very well in ham radio. Poor guy. Now he takes it out on anyone who disagrees with him. Boo hoo. Poor portly ham Davie.

Davie ought to run for ARRL public relations director. Would be a sure thing to have the league collapse by itself then! :-)

So long morse, hello the future...

LHA / WMD

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA

Poor Davie...the onset of Alzheimers so soon in you!

The "dump huck' NCVEC sent their petition to the FCC on
1 March 2003. ["dump huck is Brakob's wording not NCVEC]

The FCC put it in RM-10870 on 4 March 2004.

Brakob commented on it. I commented on Brakob's comment
as well as the petition itself.

Now, as a retired member of das Amateur Schutz Staffel, you
want to DO IT ALL OVER AGAIN?!?!?!?

How many times do you need to rant, rave, slobber, snarl, and
otherwise act like an ashpit over something ALREADY
DISCUSSED AT IN LENGTH?!?!?!? 265 comments on
RM-10870 in the ECFS at the FCC. [266 documents...the
petition and its cover letter plus all the comments]

I shouldn't be amazed. This group of amateur inmates seems
to just love living in the past, recreating the past, doing the past
over and over and over again. [eventually they might get it right]

And you, portly old ham, seem to take great delight in TRYING
to get the better of those who've gotten the better of you in
the past. You've had too many oriongasms with your expensive
"I was able to download firmware over the Internet!" transceiver.

You are wasting your time. You are wasting everyone else's time.
You've run out of valid thinking...and time.

Say goodnight, portly old ham.

End Jim's quote.

I'm assuming you knew that, since you replied to him.

> Like the old saying goes, "if you can't take it, don't dish it out" !

Lessee, he admitted error, and then worked at correcting it. That is a lot more than some in this group would do. My guess is that is about what to expect. Perhaps gnashing of teeth and pulling of hair, a good act of contrition, and a month of bread and water and wearing of sackcloth would be in order? 8^)

I missed that in my previous answer to Leo. What enemies? Lenover21 (and presumably AveryFineman) aren't too fond of Jim it would seem, And Brian would appear to be in that group. I'm assuming that Leo puts himself on that list too. So out of the group, we have three people that are Jim's "enemies" - four if you count one of Lenover21's other personalities. The rest of us like Jim just fine, thankyouverymuch!

He don't like ya. When you don't like a person, you hold them to an
impossibly high standard.

Funny, in a group where I have been accused of supporting all things I
do not comment on, and not condemning "that which should be condemned so
I'll drag this out.

Lenover21 made a mistake a week or so ago in which he said the first
voice transmissions occurred in 1906. That was incorrect. No big deal,
it was corrected I didn't notice Leo making "you can hear a pin drop"
posts about that mistake.

So regulate R.R.A.P. by bandwidth. Yelling is 10db wider than everything else.

Outlaw yelling.

"Sorry Hans, Steve >>>IS<<< Yelling!"

Hi, hi!

But certainly not all. Most look other way. Called Yell Yell enablers.

2101. FCC Announces use-based fee system for ARS

Newsgroup: rec.radio.amateur.policy
Date: 2004-08-13 02:49:30 UTC
From: K&#65533;HB <groupk0hb@earthlink.net>
Message-ID: <__VSc.19358$9Y6.8441@newsread1.news.pas.earthlink.net>
Source record: 95727

August 12, 2004 06:11 PM EDT

Gettysburg, Pa (API)

In a surprise announcement today, FCC Chairman Michael Powell released preliminary news of a new "user fee" based revenue system for amateur radio operators. "This exciting initiative, suggested by a leading amateur operator and jumpsuit model (photo at http://tinyurl.com/48krd), is designed to raise funds to subsidize the deployment of BPL service throughout America, but especially in disadvantaged places like Franklin County, Tennessee."

Details of the plan are not complete, but the fee structure will be based on actual on-the-air use of amateur radio, and will be sensitive to the value of the communications in progress, according to the Chariman. "As an example, emergency communications during a hurricane would be billed at a higher rate than less valuable usage like the North Carolina Lumbago Net." Powell remarked. "Contesters would get special high volume discounts, since their communications simply repeat the same old stuff over and over all weekend long" he stated.

Fees will also vary based on the particular mode in use, with CW being charged a premium rate because "it get's through when nothing else can". Video modes like SSTV, however, would command super-premium rates "because a picture is worth a thousand words" the Chairman said.

In a related family announcement, Chairman Powell's father, Secretary of State Colin Powell, stated that the IARU would be contacted to ensure that foreign DX operators communicating with US stations would be assessed fees based on their 'rarity' on the DXCC "Most Wanted" listing. Secretary Powell cited an alleged operation from "T5" which he expected would owe "several tens of thousands of dollars" retroactively based on claims on an internet newsgroup by an operator with the screen name "Billy Beeper".

Stay tuned for further details. Movie at 10.

That doesn't even make sense - if that is true. Charge MORE for Emergency Services? That is one of the key reasons FOR Amateur Radio.....
Something stinks there.....

In 1954 ("a half century ago") morse was the >>primary<< "long-distance
24/7 net communications" mode for the majority US Navy warships.

Good luck on this one now!

You're simply wrong, yet again. You have yet to become a beginner in
amateur radio. The problem isn't my thinking; it is your reading.

> Yeah, like beginning in 1953 at a large transmitting station, larger
> than what State Department had anyplace (and ADA was only the
> third largest in the Army network), plus doing the VHF, UHF, and
> microwave radio relay equipment operations and maintenance.

Sounds like yet another recounting of your near-war experiences, old
top.
Nothing about amateur radio there.

> Then "beginning" in civilian life in 1956 in the broadcast industry...
> with a commercial ticket (achieved in one sitting at an FCC field
> office).

Broadcast industry? Nope. Nothing about amateur radio there.

> Then "beginning" in aerospace in late 1956 by moving out here and
> "beginning" a new life in electronics corporations of a national
> reputation. [he must not think that Rockwell or RCA were
> "reputatble" enough for him...ptui]

That's all nice and we've heard it dozens of times before, but nothing about amateur radio there.

> Poor portly old ham Davie must be of the dipsnit frame of no mind
> that ham radio operates UNDER DIFFERENT THEORY THAN
> ALL OTHER RADIO...or possible that HAM RADIO IS SO *MUCH*
> MORE COMPLICATED THAN ANY OTHER RADIO!!!!!

I didn't write anything about it being more complicated. I wrote that you have yet to become a beginner in amateur radio. You are unlicensed. You are uninvolved, not a participant, not in the game.

> Worse yet, he's all hung up about TURF...the territorial imperative
> of humans that must be ultra-strong in His glorious magnificence!
> He OWNS ham radio. HE and only HE can decide who does what
> where with which.

No, I don't own amateur radio. I'm a participant along with hundreds of thousands of others in this country. You aren't among them.

> A regular Smokey the Boor - "Only HE can put out newsgroup
> fires!" [by trying to stifle all discontent, leaving him and PCTA
> cronies - or coronaries - as survivors...]

Well, you're certainly full of said discontent regarding amateur radio. The "why" is beyond me as you aren't involved.

> I just "begin" each day with the Jimmy Durante philosophy, "Ya
> gotta start off each day wid a sonnnnggg..." The rest follows okay.

Wowsers! When I think of philosophers, I always think of Plato, Aristotle, Spinoza and *chortle* Jimmy Durante.

> Oberst Smokey apparently didn't "begin" very well in ham radio.

What makes you think that? I began well and I began early. You haven't begun.

> Poor guy. Now he takes it out on anyone who disagrees with
> him. Boo hoo. Poor portly ham Davie.

Little lethargic, luckless Len. The decades fly by and *still* no ham ticket.

> Davie ought to run for ARRL public relations director. Would be
> a sure thing to have the league collapse by itself then! :-)

The League's doing fine in amateur radio though they don't have any elected public relations directors. I'm doing fine in amateur radio. You aren't in amateur radio.

> So long morse, hello the future...

I see amateur radio's future with no Leonard H. Anderson.

That's all well and good. I addressed your comment, "Don't waste our
time repeating old stuff - with the same verbiage garbiage - all over
again".
You are, after all, a great one for repeating old stuff over and over
and over again.

> And you, portly old ham, seem to take great delight in TRYING
> to get the better of those who've gotten the better of you in
> the past.

> You've had too many oriongasms with your expensive
> "I was able to download firmware over the Internet!" transceiver.

I recall that firmware debate. You lost your ass on that one. Seems
you didn't know the definition of the term.

> You are wasting your time.

Not at all. My time is mine to use as I choose.

> You are wasting everyone else's time.

Nope. No one is forced to read a single one of my posted comments. If
you feel that I'm wasting your time, you are invited to stifle your urge
to respond.

> You've run out of valid thinking...and time.

It doesn't appear that I've run out of either.

> Say goodnight, portly old ham.

Goodnight, sour old non-ham.

I think Hans is, as usual, being very funny. This scenario reminds me
of the Japanese ham who wrote to Hugh Cassidy, editor of the West Coast
DX Bulletin years back, saying that he had been told that there were
jokes in the Bulletin. He wondered if Cass could possibly point out
some of the jokes.

I don't think I was misquoting or quoting out of context at all, Jim.

YOU made a point of using your friend as a case-in-point.

MY point is that is someone wants to prioritize his addictions before
Amateur Radio (or bass fishing, or knitting or golfing...etc...) then who
needed him in the first place?

>>I ask, would YOU trivialize Amateur Radio just to accomodate a few who
>>would have to choose between Amateur Radio or purient addictions?
>
>How is Hans' or my opposition to license fees trivializing amateur radio?

YOUR post, Jim, suggests that we not enact fees since if we enacted fees it would somehow prevent Amateur Radio from attracting people who would then have to choose between supporting an addiction OR funding Amateur Radio activities.

There's a good reason for it NOT making any sense.

It was generated by K0HB.

Hans spent some time making a little fictional "news release" since he's
unable to directly address the matter objectively. Since I've managed to
derail his rant, he's taking a different approach.

I beg to differ, gents. I got three lines into Hans' message before I backed up, started again, and then had an uncontrollable giggling fit. That piece of wit, humor, and good fun is in no wise a 'rant'; and in fact, it makes a helluva lot more sense in its logic and structure than virtually anything the FCC sez these days.

Considering what is happening lately to once-upon-a-time "public" facilities in this country (entry fees, user fees, lurking fees, etc.) I

fully expect the Feds to propose exactly what Hans jests, but they would impose a more cumbersome and less logical fee assessment.

Yet, maybe even the FCC would grant ARRL Field Day a "free ride" ... it serves no purpose as an emergency exercise, no information of any value whatsoever is exchanged, and sufficient equipment is knocked out of service to ensure less QRM in the weeks and months following.

>Part 97...I've read it several times over in preparation of responding
>to this post, and I can't find a single thing that would violate
>either the spirit of the letter of the law...

One theme of the B&P is that hams are skilled operators. Another is that they are technically knowledgeable.

By reducing the license tests to the point that there would be a class of license which did not allow unsupervised operation works against those goals. So does a license which disallows homebrewing or requires some sort of Big Brother protection against the horrific dangers of 32 volt power supplies.

>>> The
>>> purpose of which is to allow a person to operate a radio, but under
>>> the supervison of an experienced operator.
>>
>>We have that now. A licensed ham is the control operator, and someone
>>else actually turns the knobs, pushes, the buttons, talks into the
>>mike, taps on the keyboard.
>
> Sure, you can do it that way, but that's not the point now, is it?

Actually, yes it is.

There's no present need for a "student license" because someone who wants to learn amateur radio operating techniques "by doing" can do so without any license at all - *as long as there is a control op*.
>
>We're (supposedly) talking about a new entry license to promote
>the service.

Right. Something like the old Novice, which got me and hundreds of thousands of others started in amateur radio.

>A "student operator" would not only be cumulative
>towards a higher grade license, it would encourge mentorship.

But why is it necessary or even beneficial? If the "student operator" cannot use the rig unless a mentor is present, why have a student operator license at all?
>
>Student operators could be given a certain amount of independence
>even, by allowing approved mentors to "sign off" thier card and
>operate under the mentor's call, ie: KN/K4YZ.

That's somewhat different. How is the mentor ham supposed to judge when the student is ready to solo?

>The precedent is already
>federal practice for student pilots. Can't solo until the IP signs
>you off!

Sure - but is that what's really best for amateur radio?

>>The words "operate an amateur radio station" have an exact definition
>>under FCC rules. It means to be in charge of the station, even is
>>someone else does the actual knob turning, etc.
>
> Words written by people can be changed by people, Jim.
>
> Even the Constitution has ammendments.

Point is, right now the term has a precise meaning.

>>> Then after some period of time or
>>> minimum operating hours, the "student" is eligible for an upgrade?
>>
>>Based on what other requirements?
>
> Take a shot, Jim...This was a general discussion...Not definitive
>proposals.

I say it unnecessarily hampers the new ham.

What if somebody wants to bypass the whole student operator thing and go straight for a higher-class license? Would that be forbidden?

Today, and for more than a quarter century, a person who can go for Extra "right out of the box". Would you change that?

>Let's rehash the previous "Novice license", as it seemed to
>work, update the technical standards, and determine where we would
>like new operators to be in terms of skill level, then set up the new
>license from there...(We are only using the "old" Novice as a
>guideline...NOT the standard to set)

OK, fine. How about this:

3) "Basic" license test is simple 20-25 question exam on regs, procedures,
and safety. Very little technical and RF exposure stuff. Main objective
is to keep Basics out of trouble. Basics get 100-150 watts on HF/MF and
25 watts or so on VHF/UHF (power level determined by RF exposure limits).

Modes are CW, analog voice, PSK31 and many of the other common data
modes
like packet. Basics cannot be VEs, control ops for repeaters, or club
trustees. Basics get most VHF/UHF and about half of HF/MF spectrum. Basic

is meant as the entry level. Easy to get, lots of privs, yet there's still
a reason to upgrade.

What's wrong with that concept for an entry-level ham license?

>>Such a system would essentially require that a prospective ham would
>>have to know a more-experienced ham in order to operate. Why do we
>>need such complications?

> Would it hurt?

Yes.

What if a prospective ham doesn't know any other hams who are willing to be
mentors and who are interested in the same things the student is interested in?
What if the student and mentor cannot match schedules? What about kids who
don't drive yet? Who checks out the mentors' backgrounds?

>nd you're at least tentatively supporting the
>idea of yet another license class...

No, I'm not. My discussion proposes three classes, like today.

>so if you're going to go that far,
>go a bit farther and consider ALL possibilities.

I have. The requirement for a mentor is unnecessary and hinders the process.

>The biggest "drawback" to my idea as I see it is that a lot of
>folks who are TALKING about Elmering and mentoring would actually have
>to do it, and may even have to take a bit of responsibility for it.
>Heaven forbid!

If I'd had to search for a mentor and wait around until both of us had
available free time, just to operate, I'd might never have gotten past that
stage. Instead, I was able to get a Novice license, build a station, and go on
the air unsupervised. I don't see anything wrong with keeping that concept.

>And who said this would be the ONLY way to enter Amateur Radio?
>There's a lot of folks out there who never operated a day with a
>Novice, Tech, General or Advanced licenses...

So you would allow the student license to be bypassed? Someone could get an Extra "right out of the box"?

>>>Or why don't we quit wallowing in all this administrative
>>>quagmire and just "get on with it"...???
>>
>>What "quagmire"? The FCC amateur radio license system today is far
>>simpler and more accessible than at any time in the past 35 years.
>
> The "quagmire" of proposals that continue to arrive the FCC,
>including the present NCVEC "plan"...
>
The NCVEC plan isn't new; it got an RM number quite a while ago. We're just taking another look at it. Still looks as bad as it did before. Worse, even.

That's how the democratic process works.

>>> As you and I have both pointed out on numerous
>>> occasisons, Jim, Gradeschoolers are passing the EXTRA, ergo there's
>>> little validation for a new "entry class" license...
>>
>>That doesn't mean things can't be improved. Do you *really* think the
>>current Tech is the best we can do for an entry-level license? I
>>don't.
>
> Why not?

Because:

- The Tech is VHF-UHF centric. It pushes new hams into one type of amateur radio operation, and isolates them from HF. And because of the difficulties of homebrewing VHF/UHF gear, it pushes them away from homebrewing. (And from Morse Code! ;- 0)

- The Tech allows all privileges above 30 MHz. Therefore, its test must cover a wide range of subjects, many of which are not commonly used by beginners. Yet the beginners must learn the stuff because the license allows it. Example: Not many new Techs will set up 2 meter stations with high gain antennas and run high power, but the license test must and does cover such RF evaluations. And much more.

Meanwhile, basic radio subjects are not covered in depth.

>YOU have said that gradeschool kids are passing this test...Then
>it can't be all THAT bad!

Yep. Yet the *license* can be improved.

>That "entry-level" license already bestows
>over 97% of all Amateur allocations with it. Unless you want to
>suggest that we cut back privs from the E's, A's, and G's (and

>remaining N's) and redistribute it in thirds? (Fourths?)

Nope. See the concept I posted some time back. It covers all those bases.
>
>>What is wrong with the "Basic" license I propose above? If you don't
>>like the name, call it something else, but what's wrong with the
>>*concept*?

Hmmm?

>>> Now...if the POOLS were closed and the applicants actually HAD to
>>> LEARN
>>> something, there MIGHT be a reason to have a simpler test to get
>>> started with..
>>>
>>Write up a proposal to close the Q&A pools and submit to FCC. Be sure
>>to explain in a convincing manner:
>>
>> - why this change needs to be done

> I thought I already addressed that, Jim...

Not in language that would be appropriate to an FCC proposal.

>Fines and/or prison for the abusers. Period. A new paragraph in
>Part 97 that speicifes that the questions are sequestered, and that
>publishing them is a violation.

Write it up. Include who has access and who doesn't.
>
>The VEC's can still prepare and distribute appropriate exams.
>They can even solicit questions just like they do now...It would just
>be illegal to publish them.

Define "publish"

>> - how prospective amateurs will know what to study without access to
>>the pools
>
> Uhhhhh...the same way it was done BEFORE Bash...Study guides with
>outlines of the required material...

Right. So somebody has to generate those, too.
>
>> - who is going to do all the work needed to make the change

>
> The VEC's>>AND<< the FCC.

And if they don't want to? NCVEC's proposal is full of complaints about how
much work they do.

>> - how the whole system will be protected against "Son of Bash"
>
> Fines and/or prison for the abusers.

>> - how all of this can be done without it costing more FCC resources
>
> You mean and not use more resources than they already use to hash
>and re-hash numerous licensing structure plans?

Yep.

> Most of the "changes" would be in the purview of the VEC's. They
>need the letter-of-the-law to back them up, which means the FCC would
>need to little more than get the laws enacted and on the books.
>
> Then do exactly like they've been doing for other Amateur
>matters...Encourage Amateurs to take care of it with internal programs
>and then only use the hammer as a last resort.

So where's the complete proposal?

And what's wrong with the system I proposed?

Somewhere in this thread maybe it was pointed out that here in the US
we don't really need a student operator license since an unlicensed
person can operate with a control operator?

Steve, I do like your idea. I think it might be well implemented as a
concept and program instead of a specific license. Getting a person to
operate is half the battle IMO. At least it worked for me. Working field
day with a control operator got me hooked.

Any ideas there?

Hehe, I guess someone did point this out!

For this entry grade license, the operation under a control op would
almost have to be eliminated? I dunno, there is a bit of interference
between the concepts there.

<the rest snipped for brevity>

What Steve proposes is a good idea that just has a few bugs in it. the
major one is that in principle, the situation already exists, just not
"officially". In other words, an unlicensed person can operate a station
under the "steely eye" ;^) of a control Op.

Let's take a step back now to Field day. I have run the GOTA station at
our FD since it's inception. I know of at least two people that have
become interested by use of it and have gone on to become active hams.
It is a good concept, and I think that getting people on the air in a
low-pressure environment is key to getting prospective Hams hooked. It
works.

Now to the subject at hand. If instead of a separate license class, why
not have an ARRL sponsored initiative, similar to "Kids Day", in which
an effort to get anyone that has some interest to work HF and VHF to
come out to the local mall or wherever and operate. The same can be done
at a club's radio site.

It would not only be good from a "getting people interested"
perspective" but would be good to potentially get more league members.

> various layers of simplification have brought in many new hams.

There were approximately 260,000 US hams in 1968, when "incentive
licensing" was re-introduced after a lapse of slightly less than 16
years.

Today there are at least 675,000 US hams, so even of every one of
those
who held a license in 1968 were still with us, they'd constitute less
than 40% of US hams.

If we assume a 2% annual dropout rate of those who were licensed in
1968, only dropped out only about 123,000 are left from those days.
Less than 20% of today's US hams.
>
> I suspect the whole thing about incentive licensing is overblown.

Me too! And I was one who lost privileges.
>
> How did incentive licensing damage the inflow of young people to the
> hobby?

Two ways:

1) The requirements for a full-privileges license were raised. In the
1953-1968 time period, all a new ham had to do was reach the
General/Conditional level, and s/he had full privileges. "IL" meant
that there were two more steps on the ladder to climb for the same
goal. And unlike the Conditional, those higher steps were usually only
available in front of an FCC examiner.

> It was the already licensed hams who grumbled, and who lost
> anything.

2) The grumbling and complaining of those hams had an effect too. One
common cry heard in those days was "our equipment will be made
worthless" - which is the last thing a cash-strapped young person
wants to hear! Another was complaints about how difficult the tests
were or would be. Was it not reasonable that young newcomers would
think the task to be nigh-impossible if older, more experienced hams
were afraid of it?

I recall all this clearly because I *was* one of those young new hams
in 1968. And when I got to the FCC office and actually took the exams,
I wondered just what all the fuss was about. It was a real eye-opener
for me.

> Consider that all the changes made over the 35 years to make it
> easier for people to come into the hobby (and we've seen similar
> changes here in Canada in recent years) may have the reverse effect
> when it comes to young people.

The biggest ham-radio-related problems I had as a young ham were:

- Lack of money for ham radio
- Lack of information
- Lack of space for an antenna

I suspect that these are the same problems today - not license
requirements.

> Maybe the tests, code and theory, that
> are so much a burden for the older person coming into the hobby were
> not an impediment to the young.

One advantage many young people have is that they're used to studying,
taking tests, and passing them.

> They thrived on it, and at a young age,
> it was a boost to be able to pass the test when older people were
> griping about how hard the test was.

Yup.

I think that one of the reasons the Morse Code test is so despised by
some people is that it acts as a Great Equalizer. Except for a few
who learned the code outside of amateur radio, most new prospective
hams are faced with the task of learning the code from scratch. And
this
is true regardless of age, education, income, profession, titles, work
experience, etc. (Remember that I did except those few who learned it
elsewhere).

The end result is that the Ph.D EE usually starts at the same place,
code-wise, as the gradeschooler. And the gradeschooler may wax the
Ph.D's tail, too. Some people's egos cannot tolerate that. And some
people have trouble integrating young people into what *they* consider
to be an "adult" activity.

> When I passed the test in 1972, at
> the age of 12, it was no drag to be able to accomplish that. It was
> practically like snapping my finger, because what was in the test interested
> me, and it was not merely an obstacle to overcome before I could start
> yacking on the radio.

I had a similar experience. There was one significant difference: I
started out

wanting simply to join the hams I heard on 75 meter AM. But to do that required
at least a General license, so I set out to learn the code and theory, earn a
Novice and then a General, and build a station. To me, these were just
items on a to-do list.

Along the way I discovered, by actual use, how 'cool' Morse Code is,
once you actually know it at a useful level, and so became primarily a
CW operator. Of
course I did SSB and FM and even AM too, but Morse Code still tops the
list.

> If you're ten (which is when I first set out
> to learn the code, though I did not go about it properly), or eight, you're
> young enough that being able to understand a "code" of some sort is picking
> up a secret language that those around you don't know; that's incentive
> in itself to learn it.

That's true of many people, and particularly the young. It's one of
the things
that makes the Harry Potter books so popular among young people.

> But, all the changes have been made by middle age men, or older, who
> often seem to have forgotten what it was like to be young and get their
> first ham license, or who came into the hobby in later years. They
> are making judgements based on being middle age, which may not reflect
> what it's like to be young.

EXCELLENT POINT!

And those of us who *do* remember are sometimes reviled as "living
in the past" or being "immature"....

But in fact we remember the joy of discovery, the energy and
enthusiasm of
youth, and most of all the feeling of "magic" and the challenge of
being a skilled operator. That's the real appeal - then and now. If I
ever lost them, I'd sell out and just let the license lapse.
>

Exactly!

> There is plenty I learned
> from amateur radio that have nothing to do with technical matters, but it

> comes from being part of a not just for children activity when I was still
> what amounted to being a child.

Me too!

And there's another factor: We kids could be accepted as adults - or
at least as equals - based solely on how we presented ourselves on the
air. There were and are few other activities where that is true.

> Maybe in watering down the entrance

> numbers.

You should write this up for QST and any other ham mag that will print
it. It's what many of us have been trying to say for years but have
been unable to clearly voice.

I will add just this: Part of the appeal to many people, young and
old, is
that something like ham radio *does* have high standards, traditions,
procedures, and requires a level of *personal investment* that goes
beyond simply buying a radio and talking into it.
>
> And getting back to the middle age men, it is they who keep repeating
> the mantra "how can amateur radio be appealing in a world where every kid

> general is the pivot point, then of course there can be little appeal
> to the youngster. Only by promoting the hobby's strengths and uniqueness
> can one hope to compete with superior forms of communcation.

You've really nailed it, Michael.

Amateur radio can only survive by offering an experience that is
uniquely different, not by trying to compete with cell phones etc.
That's always
been true. The purpose of the early hams relaying messages was not to
compete with Western Union, but rather to offer an alternative
communications experience and resource.

And it should be noted that amateur radio has always been a specialty
sort of thing. Back in 1968-1972, when I was in high school, there
were perhaps a half
dozen hams out of about 4500 students (combined boys and girls of two
adjoining Roman Catholic high schools). This was in middle class
suburban neighborhoods, a trolley/subway ride from the FCC office, and
the schools emphasized math and science.

There's a two-page spread in QST this month showing a listing of young hams who have earned various scholarships this year. Quite impressive.

Good to see they gathered the "valuable information" and still pulled the plug. Obviously if it was such a good thing, they would have announced their immediate plans to expand the service area.

Took 'em $500,000 dollars to find out exactly what we told 'em would happen. I'll offer to consult with these Powerline companies for 20 percent of that cost.

One more battle.......

Michael,

I am convinced that incentive licensing remains the hands down all time winner of the DAIOTC (Dumb Assed Idea of The Century) award.

When a lot of us got started in the hobby the bands were not subdivided like they are today and it seems that we all, regardless of license class, worked together to improve the Amateur Radio Service. I didn't lose any privileges in 1968 because I had been an Extra for several years, but I thought it was a really bad idea at the time, and I remain convinced that it indelibly damaged Amateur Radio in the United States.

Back then, it seems that we all, regardless of license class, worked together to improve the Amateur Radio Service.

Back then, nobody got a special deal because they could beep faster or remember more electrical formulae than someone else. I got my Extra in 1964, well before disincentive licensing, and it was simply just another personal accomplishment, and did not "elevate" me above other hams. We all shared the same spectrum, worked together to solve the same problems, competed in contests, trouble-shot each others radios, and generally had fun together.

If you forgot the numbers for the dipole formula, it was OK to ask someone else. If your Morse speed was < 10WPM the speedier guys would slow down for you, not QSY to some specially reserved band segment. The one or two "old timers" on 75 meters who didn't like newcomers ("No lids, no kids, not space cadets") were universally looked down on as poor examples of what a ham ought to act like. The Novice bands were a "cacophony of exuberance" to steal a term that K1ZZ used in a meeting here in Minneapolis. Old hands were on those Novice bands also -- it was not unusual to hear W4KFC or W5ZD patiently working WN4KKN or WV2CNL -- nobody remarked that it was "nice" of them to do that -- it was just part of being a good ham.

The notion that you had earned a special band segment never occurred to anyone -- we were just excitedly "playing in the ether", and there was

no distinction on the air between Extra, Advanced, General, or Conditional -- elitist special callsign formats to celebrate the fine granulations of your test taking/memorization skills had not been invented.

36 years later we are still sliced and diced into 6 different classes, carefully divided into our own special frequency segments, and Lord protect the Extra who suggests that a new Technician might have something to contribute to our beloved Amateur Radio service.

We'll never return to 'back then', unfortunately, and the intervening years have not produced the breed of "superham" which we were promised by ARRL and FCC; quite the opposite --- the technical acumen of the typical amateur of today is many dB lower than it was back then.

Sunuvagun!

Some folks are not one-trick ponies who vote "single issue". I think
both Kerry and Bush II are bad choices for President (a pox on both
their houses) but I can imagine a person supporting parts of each of the
liberal, moderate, and conservative agendas, and voting for the PERSON
who best promises to meet that blend of agendas.

Strange, huh? We call ourselves "Independents".

PCTA all stick together. Weird sort of glue used.

Das robust oberst "guesses" a lot. In PCTA circles that makes his
"guesses" absolutely unequivocally "correct." [they defend their own]
[have to, nobody else really wants to defend the indefensible...]

Hmmm...this thread was originally about "FCC Office Testing
History." Nobody talks about that...too busy doing the "good fight"
on the "superiority" of elitist morsemen extras.

I was last at an FCC Field Office about 1980. Not for any test,
just paperwork on a business radio. Took a real test at a real FCC
Field Office in 1956...commercial license test, passed First 'Phone
in one sitting (in Chicago). Not the same as ham test. Ham test
is far, far "superior." Have to bow head and genuflect as elitist
morsemen extras pass. They be "superior." Ave!

Should have moved...Chicago beside Lake Michigan, not Lake
SUPERIOR. :-)

>
>Good luck on this one now!
>
>73, de Hans, K0HB
>Master Chief Radioman, US Navy

...as it was in 1904. :-)

...but NOT in 1854!

Why not? The Morse-Vail Telegraph debuted 10 years before that.

So...can the EX master chief radioman of the United States Navy
do any path loss calculations for minimum to maximum Mars-Earth
distances?

Or are you far too busy being "superior" like all the other morsemen?

The first-ever moonbounce of radio was done the United States
ARMY. That's beginning interplanetary communications by radio.
A bunch of civilians did the first Venus-bounce by radio waves a
few years later...again a beginning.

No, you want to fight, fight, fight (just like fighting the NCVEC all
over again on an old reprint of RM-10870) and show how "superior"
morsemanship "is." [should be 'was' but morsemen can't admit
that]

Well, I was at the Yokosuka communications central of the USN
in the early1950s and didn't see any evidence of morsemanship
at work then. Must have been my bad, ey? Just too busy carrying
some of the USN circuits via TTY back then. Morsemen must
have been on some legendary Mt. Olympus looking down on all
the mere mortals down below.

Oh, and did you know that on-line TTY encryption was first done
in the USN in 1940? Used the original form of what would become

known as the "Sigaba" later. That on-line RTTY encryption was what made the Battle of Midway possible through coordination of all fleet elements. Japanese never compromised our system but we compromised theirs.

You keep on beeping away, master super chief. Morsemanship is the key to being a "real" ham...in 1954 or in 2004 or in 2054.

Anchors awry.

Leo reads these messages. Newsflash: Public messages are
accessible to anyone with newsgroup access.

>> Was simple matter to reach up for Almanac, go to page with basic
>> planetary data, find minimum and maximum distances Earth to Mars,
>> then use calculator to divide that by approximate speed of light. NOT
>> a tuff thing at all. Simple.
>>
>> He got corrected. Correction corroborated. Where's the beef?
>
>Check with Leo.

No "beef." You want to increase polarization through "sticking by
your 'man'."

You are PCTA. All PCTA stick together. [with crazy glue?]

PCTA will hang together...or hang separately.

> No, I can carve a good turkey tho'.

Not yet. Most PCTA are "turkey." You're carving the wrong side.

>> Is this some kind of IMAGE thing with you PCTA? You all have to
>> be "right" even when you are wrong?!?!?
>>
>> You want Flame War over trivia? Go fight with Alex Trebek on
>> Jeopardy and against Ken Jennings.
>
> Wouldn't that be cool if he posted in here? Thanks for the invitation
>anyway.

Why? Rev. Jim would correct Alex and Ken both. That's a given.

>> Or work hard on your morsemanship, be a "real" ham!
>
> I am a real ham, despite my lack of morseosity.

You aren't fast enough. You won't fit in to the 1930s.

>> Recreate the past, do it again, and again, and again until you get
>> it right!
>>
>> Pbthbthbthbth...
>
> Spill Pepsi on your keyboard? 8^)

No. I read "Opus" in the Sunday paper comics. More intelligence
there than the sum total of the PCTA's efforts...

If anything got "spilled," it would be coffee. Coffee is the beverage
of the aerospace industry. I was in that for many years. How long
were you in aerospace? Rev. Jim? Smokey the Boor? Yell-Yell?

It's a terribly simple matter to pull out an almanac and look up
basic planetary data. No....not to the PCTA....one has to have
a Masters and be capable of high morse rates to be "right" and
still get it wrong...and then get all kinds of sob-stories from PCTA
buddies "defending" him and his attitudes.

Okay, so you've got the basic data on distances. Can you do
the simple math of PATH LOSS for any frequency over those
distances? Hint: Path loss formulas are in many RADIO text
books. There are nomographs for it. There's one in the 1958
ITT "green bible."

PATH LOSS is important. You can't do interplanetary comms
with Tuna Tin Two QRPs no matter what the morsemen claim.
Fabled morse code won't help at all.

But, Mike, you claim "being a diletantte" (even if you spelled
that incorrectly and das robust oberst didn't correct you) and
want to make a big thing out of having OTHERS do the math
while you sit back and try to egg on the fight.

Maybe you think it's "cool" that, like Rev. Jim, there's a "prize"
for the first amateur communications between Mars and Earth.
A "prize" established in 1926. Considering the state of the radio
art of 1926, that "prize" sounds more like an April Fool joke of
that glorious year coming up on the eve of the Great Depression.

Go to your beloved guru of the past, Rev. Jim, and get a picture
of the state of the radio art of 1926. Live it up. Glory in the
past that was well before you were born. Become an assistant
guru. Revel in what once was. <shrug>

Or talk about space travel of today. No matter. None of you
PCTA here were ever in the space business but you are all
"correct" in what you say even when you're not. <shrug>

On this last point in your post, it is now I who beg to differ. Field Day serves no useful purpose as an emergency exercise? Personal experience here would seem to indicate otherwise.

No information of any value is exchanged? Maybe not between two distant stations on the air, but every year at Field Day the newer members of our club get the chance to come out and see how lots of things are done that they haven't seen done before. They see the equipment chosen by more experienced hams who are involved in the emergency communications aspect of amateur radio. They see how those hams pack up that equipment for safe transport. They see how it is set up and used, how it is powered, how antennas are erected and connected. That's all valuable information. of course, this assumes that the club in question makes an effort to get those new guys to come out and participate. ours does. Your mileage may vary.

Finally, if your equipment gets knocked out at Field Day, that in itself is some valuable information gained, namely that someone needs to reconsider their choice of equipment for emergency use. If that equipment gets knocked out during an exercise, how well do you think it is going to stand up during a *real* emergency?

[snip]

If this were 1950, I would agree that ARRL Field Day is a relevant and valuable exercise. Today, I disagree. Sad truth is, the element least welcome at the Federal/State civil emergency authorities table is the amateur radio community. The federal/state power structure and self-perpetuating control structure are increasingly hostile to "amateur" intrusion as any truly significant part of the professional organization mission.

Things have changed greatly in the last 40-50 years, and most catastrophically during the government's rush to "absolute security" following 09/11/01. The "involved citizen" is honored in lip service only nowadays. Perhaps this is why the old guard at the ARRL is frantically trying to find a new look for the old ARES .. hoping against hope to cloak it in digital, commercial, internet garb (WinLink 2000) to make it appear more attractive to the federally-dominated emergency structures.

Field Day used to be fun, any maybe it still is .. but it sure is pointless for anything serious .. unless you're thinking we'll be tapping out CW on scavenged, converted transistor radios from our caves during the post-nuclear accident epoch.

Maybe where you are. Here it is a key part of both inter-agency
and inter-hospital backup communications.

iss qso on echolink monday 2004-8-16

on monday 2004-8-16 at 18:05 UTC the iss will have a 10min two way qso
with the Challenger Learning Center at Prairie Aviation Museum,
Bloomington, IL

questions will be asked by a group of students

the plan is to stream the international space station audio in the
echolink amsat conference room

room number 101377

you are welcome to drop in and listen to the qso

if you would be willing to help and stream an iss school/college
contact then please let me know

that way the contact could be heard around the world

hams could then transmit the audio locally so any school/college with
a scanner could also listen to it

for up coming iss events visit

http://www.amsat.org/amsat/ariss/news/arissnews.txt

please contact me if you are willing to help or have any questions

My novice license took 6 months from the time I tested to the time it
showed up in the mail. Also first licensed in 1992 as well. I went
from non-ham to Extra in exactly a year I was attending test sessions
once every 2 months, my Advanced license showed up in the mail before
my General license.

I was signing /AE until the new Extra callsign arrived. I wasn't
hooked onto the internet at that time in 1993.

Actually it was that way. My father had a KN7 call and the Novice
license even back in the early 1960's was good for only one year, then
it became null and void. He upgraded before the year ran out, and
they dropped the "N" from the prefix, and he's held that call since.

The City of Grandhaven, MI has just set up WiFi for the whole area, and Ottawa County is taking about doing the same for the whole county.

How could any local entity (govt. or otherwise) do this using satellite? The cost of launching a satellite is too high. Aren't the existing staellite Internet services (DirecWay -- is there any other?) slow and expensive, and require a large outlay up front for equipment?

Alan NV8A

On 08/14/04 05:47 am S. Hanrahan put fingers to keyboard and launched the following message into cyberspace:

> to find it.
>
> No need for Keplerian tables or that other BS about "picking a position"
> since all you need is the MAXIMUM distance for path loss.

The path loss varies
quite a bit, depending
on the positions of
the planets...
>
> Or, you can cheat and crib from NASA information.

Why would copying
NASA information be
"cheating"?

> They've been
> in the interplanetary communications business for over three decades.
> Theoretical information is even older, and still accurate.

Why not simply answer
the questions?

>>Tell us what the Doppler shift is over the length of a short QSO,
>>starting at the time of of start Assume a DX style QSO with a short
>>feedback message to insure actual reception on both ends, say a 35
>>second transmission. Then the same for the return message.

The Doppler shift
will be essentially
constant over the
length of such a
QSO.

If the Doppler shift
is expressed as a
percentage of the

operating frequency,
it depends only on
the relative velocities
of the stations.. The
relative velocity
calculation should
take into account both
the orbital and rotational
velocities.

> Illogical premise. Interplanetary QSOs have such long round-trip
> times that your paradigm isn't worth 20 cents. Think about it.

Illogical answer. Len
appears not to understand
the question. This is
understandable because
Len is neither a radio
amateur nor a contester.

It has been calculated that
round-trip delay at closest
approach would be only
a bit more than 6 minutes.
This is also the time of
minimum path loss and
low Doppler shift. Therefore
the premise is quite logical.

If you understand it.

> Doppler shift isn't a big problem.

That depends on
the specifics.

> RF power output IS.

Not really. The
robot probes to
Mars and beyond
do not use high
power. Less than
100 watts is more
than adequate.

The use of such low
power requires the
use large but steerable
antennas and very
sensitive receivers.

In the early 1960s,
some amateurs
were allowed to use
the 1000 foot
Arecibo antenna
for amateur EME
operation.

They were quite
successful, even
with the limitations
of amateur equipment
of those times..

> Think about
> that...no ionosphere in between planets, nothing else like it.

Nothing else
is needed.

>>At this time I don't know those details, but I'll be happy to check
>>them out once you've posted them. Add anything I have forgotten but may
>>need to know.
>
> Sorry, Mike. It's up to YOU and the other latter-day saints of see-
> double-yew to take the first shot. You are NOT the range officer
> in this shooting gallery.

Why not simply answer
the questions?

> If you can't do it, well, you can't do it. No problem to me. :-)

It appears that Len
can not answer the
questions.

Some very rough
calculations of
path loss:

At closest approach, the one-way path to Mars is roughly about 60 times the
round-trip distance to the moon. So the path loss is 3600 times greater. 3600
times greater is roughly 71 dB.

However, the moon is a pretty poor reflector, losing very roughly about 11 dB
at typical UHF/VHF amateur frequencies. This loss would not exist on a one-way
path to Mars.

So as a very rough estimate, the one-way path loss to Mars at closest approach
is about 60 dB more than EME path loss.

These are very
rough calculations
but at least they are

an answer.

Uh huh...

>By reducing the license tests to the point that there would be a class of
>license which did not allow unsupervised operation works against those goals.

WHO SAID "unsupervised"...?!?!..The "operator only" license idea is the
very epitome of "supervised" licenses, and would probably provide that
""skilled operator" a heck of a lot faster than the present "here's your
license now go learn" situation we have now!

>So does a license which disallows homebrewing or requires some sort of Big
>Brother protection against the horrific dangers of 32 volt power supplies.

>>>> The
>>>> purpose of which is to allow a person to operate a radio, but under
>>>> the supervison of an experienced operator.
>>>
>>>We have that now. A licensed ham is the control operator, and someone
>>>else actually turns the knobs, pushes, the buttons, talks into the
>>>mike, taps on the keyboard.

>Actually, yes it is.
>
>There's no present need for a "student license" because someone who wants to
>learn amateur radio operating techniques "by doing" can do so without any
>license at all - *as long as there is a control op*.

OK, Jim.

>>We're (supposedly) talking about a new entry license to promote
>>the service.
>
>Right. Something like the old Novice, which got me and hundreds of thousands
>of
>others started in amateur radio.

And now the Technician Class does that. And......?!?!

>>A "student operator" would not only be cumulative
>>towards a higher grade license, it would encourge mentorship.
>
>But why is it necessary or even beneficial? If the "student operator" cannot
>use the rig unless a mentor is present, why have a student operator license
>at
>all?

Details, Jim...It assigns a trail of responsibility in the training of the
new ops.

>>Student operators could be given a certain amount of independence
>>even, by allowing approved mentors to "sign off" thier card and
>>operate under the mentor's call, ie: KN/K4YZ.
>
>That's somewhat different. How is the mentor ham supposed to judge when the
>student is ready to solo?

When the student has met the criteria for a "solo", whatever those final
criteria may be later determined to be...Just like a CFI allowing a Student
Pilot to take it around the patch with the right seat empty.

>>The precedent is already
>>federal practice for student pilots. Can't solo until the IP signs

>>you off!
>
>Sure - but is that what's really best for amateur radio?

I don't know...Do you?

The FCC get's a dozen petitions a year suggesting new license proposals
that will immeidately and undoubtedly save Amateur Radio from certain impending
failure.

Do YOU have >>THE<< one failure-proof idea? I Sure don't.

>>>The words "operate an amateur radio station" have an exact definition
>>>under FCC rules. It means to be in charge of the station, even is
>>>someone else does the actual knob turning, etc.
>>
>> Words written by people can be changed by people, Jim.
>>
>> Even the Constitution has ammendments.
>
>Point is, right now the term has a precise meaning.

Uh huh.

And tomorrow it may have ANOTHER "precise meaning".

I am not talking about TODAY'S Amateur Radio, Jim...

>>>> Then after some period of time or
>>>> minimum operating hours, the "student" is eligible for an upgrade?
>>>
>>>Based on what other requirements?
>>
>> Take a shot, Jim...This was a general discussion...Not definitive
>>proposals.
>
>I say it unnecessarily hampers the new ham.

OK...Your opinion noted. 674,999 others to go.

>What if somebody wants to bypass the whole student operator thing and go
>straight for a higher-class license? Would that be forbidden?

If I was clairvoyant I'd be buying Lottery tickets.

And in my opinon, no...If someone wants to just dive right in, let'em.

>Today, and for more than a quarter century, a person who can go for Extra
>"right out of the box". Would you change that?

Only that I would like to see a return to the "time-in-service"
requirement that used to be part of the Extra. The Extra SHOULD represent
evidence of more than have=ing taken a written test. I should say "I
accomplished this and have PROVED it through accomplishments noted".

>>Let's rehash the previous "Novice license", as it seemed to
>>work, update the technical standards, and determine where we would
>>like new operators to be in terms of skill level, then set up the new
>>license from there...(We are only using the "old" Novice as a
>>guideline...NOT the standard to set)
>
>OK, fine. How about this:
>
>3) "Basic" license test is simple 20-25 question exam on regs, procedures,
> and safety. Very little technical and RF exposure stuff. Main objective
> is to keep Basics out of trouble. Basics get 100-150 watts on HF/MF and
> 25 watts or so on VHF/UHF (power level determined by RF exposure
>limits).
>
> Modes are CW, analog voice, PSK31 and many of the other common data
> modes
> like packet. Basics cannot be VEs, control ops for repeaters, or club
> trustees. Basics get most VHF/UHF and about half of HF/MF spectrum.
>Basic
>
> is meant as the entry level. Easy to get, lots of privs, yet there's
>still
> a reason to upgrade.

Why not digital voice?

And I wouldn't be so quick to dole out that much sprectum. Otherwise, why
not?

>What's wrong with that concept for an entry-level ham license?
>
>>>Such a system would essentially require that a prospective ham would
>>>have to know a more-experienced ham in order to operate. Why do we
>>>need such complications?
>
>> Would it hurt?
>
>Yes.

No...It wouldn't.

Local ARRL Special Service Clubs could sponsor Mentorship training and
pair up volunteers and students.

Students would get immediate exposure from working directly with a
mentor...Not a video tape.

>What if a prospective ham doesn't know any other hams who are willing to be
>mentors and who are interested in the same things the student is interested
>in?

What if a prospective Ham just woke up from a 25 year coma, doesn't know
about the Internet or search engines. What if...

My point here Jim is that the programs will eventually become self
sustaining with word of thier existence speading.

>What if the student and mentor cannot match schedules? What about kids who
>don't drive yet? Who checks out the mentors' backgrounds?

If the student and mentor can't match schedules, they change mentors. And
kids can get around. And local clubs can screen mentors.

>>nd you're at least tentatively supporting the
>>idea of yet another license class...
>
>No, I'm not. My discussion proposes three classes, like today.
>
>>so if you're going to go that far,
>>go a bit farther and consider ALL possibilities.
>
>I have. The requirement for a mentor is unnecessary and hinders the process.

OK...If you say so. I say that mentors will put out more responsible and
well trained "new licensees"...

>>The biggest "drawback" to my idea as I see it is that a lot of
>>folks who are TALKING about Elmering and mentoring would actually have
>>to do it, and may even have to take a bit of responsibility for it.
>>Heaven forbid!
>
>If I'd had to search for a mentor and wait around until both of us had
>available free time, just to operate, I'd might never have gotten past that
>stage. Instead, I was able to get a Novice license, build a station, and go
>on
>the air unsupervised. I don't see anything wrong with keeping that concept.

Were you the exception or the rule?

Shall we base ALL future expectations on how well you did...???

>>And who said this would be the ONLY way to enter Amateur Radio?
>>There's a lot of folks out there who never operated a day with a
>>Novice, Tech, General or Advanced licenses...
>
>So you would allow the student license to be bypassed? Someone could get an

Why couldn't somebody want to continue using his firearms (I don't have any myself) but also want a decent health-care system?

In my own case, I am "pro-life," which means that I am opposed to abortion, except in some very limited circumstances; I am for severe restrictions on the ownership of firearms; I am for a decent health-care ssytem that covers everybody; I am opposed to first-strike military "solutions." (I believe that those views are not unlike the official view of the Roman Catholic Church, although I am a conservative Protestant.)

Neither of the major parties represents my views. It's not being "wishy washy" to have a hard job deciding for whom I would vote if I were entitled to do so (I am still a non-citizen legal resident).

Alan NV8A

> What's strange about that?

While I don't have numbers on what the membership breakdown is, the NRA gives almost no money to Democrats; to wit:

> *Republicans were the big recipients of the political gifts, receiving 69
> *percent of the total dollars contributed; Democrats received 14 percent,
> *and the remaining funds went to third-party candidates or those whose
> *party affiliation has not been determined.

http://www.followthemoney.org/press/ZZ/19990714.phtml

Certainly ALL the NRA members that I know are straight ticket Republicans, and considering the jaded looks I get from just being registered independent, I suspect that a Democrat might be a tad unpopular. Seems to be the sort of an organization that lets you know in no uncertain term what you think. In fact, many of the members that I know would probably take a scraper to the vehicle with both stickers on it. Half would remove the Kerry Sticker, and the other half would remove the NRA sticker from the traitor's jeep! ;^) (joke alert)

I'm pro-gun and I enjoy the privelige / right to own a gun, but they are simply way too rigid. I'd join in a minute if they weren't.

I did.

What we have now, and have always had in the USA, is the concept that a ham can operate an amateur station *unsupervised* within the limits of his/her license privs. And nobody else can.

IOW, either you is a control operator, in charge and responsible, or you ain't.

Your "student operator" idea would create an unnecessary intermediate step. A "licensed ham" who cannot operate unsupervised. Bad idea, I say.

>The "operator only" license idea is the
>very epitome of "supervised" licenses,

Which is a bad idea.

>and would probably provide that

In some places. In others 2 meters isn't much.

Why not set them down with a whole choice of options?

I respect your views. However please consider this. Without a country,
all the rest doesn't matter a whit. The United States was attacked, we
declared war on the terrorists. Now we MUST WIN.

The choice is simple in my mind.

"The best defense is a good offense"

Hope you get your citizenship soon, you will make a good addition to the
melting pot.

Depends on the kid.

At age 12 I could explain to you about the ionosphere, why the low HF bands are best at night and the higher ones during the day, the basics of CW, AM, SSB, FM, FSK, and a whole bunch more. Not as well as I could today but to a level sufficient to keep me out of trouble.

I suspect that plenty of younger kids could do the same, given the right learning materials.
>
> But it's not just kids...It's just about anyone anymore.

Depends entirely on the person. There are lots of very knowledgeable hams out there - newbies and old timers alike.

Some good ideas, some not-so-good ideas.

Good ideas:

- It's about bandwidth, not content. Right now, if you can fit a digital voice signal into a 200 Hz bandwidth, you can only use it on the 'phone-image subbands. But you can use a much wider PACTOR signal on the CW/data subbands - as long as the PACTOR signal isn't carrying digital voice.

- Is Hellschreiber data or image?

- Faster data modes have a place to play

Bad ideas:

- Robot pactors and such can go way down in the band

- No CW-only subbands

Just IMHO.

that?

>The argument could be made that
>having the money--no matter what it takes--proves worthwhileness to the
>amateur radio community.

We think many but not
all would reject the idea
of someone being able
to buy an amateur
radio license.

But perhaps the fact
that money alone
cannot honestly buy
an amateur license is
what really bothers
some people about the
code test. Or any
serious level of
testing.

At least one non-
amateur here has
made repeated mention
of what his house is
worth, how he could
buy a "Hummer" for
cash, etc.

Perhaps that person
is frustrated and
angered by his
inability to buy his
way into amateur
radio.

Or to buy some respect
from others.

You have made us
think about it, Kim.

Thank you.

>"Ya gotta do what it takes" applies across the board...wouldn't it?

That's what mature
people who want a
particular goal say.

Or "Life Member Planned Parenthood!" Hi, hi!

I thought the t-shirt that debutted at the DNC Convention, "I had an Abortion!" was especially ojectionable. But what's new from the people who booed the Boy Scouts saying the Pledge of Allegiance at the 2000 Convention.

Nope, it's because they found something that worked once(get elected
when you have less votes than your opponent) via the electoral college.
The Pubs really like voting by proxy! 8^)

Amateur Radio Newsline™ Report 1409 August 13, 2004

Note: Ladies and gentlemen This weeks newscast is dedicated to the memory of the late Roy Neal, K6DUE who passed away a year ago on August 15, 2003, following heart surgery. Roy was our friend, teacher and served as the first elected vice-president of Amateur Radio Newsline after it became a 501(c)(3) nor-for-profit corportation. We miss him very much. "So Roy old buddy: This one is for you."

de WA6ITF

Amateur Radio Newsline report number 1409 with a release date of Friday, August 13th, 2004 to follow in 5-4-3-2-1.

The following is a QST. Australian hams ask for a new ham band at 500 kilohertz, lots of news world wide on the B-P-L front, and the FCC talks about license processing. Find out the details on Amateur Radio Newsline report number 1409 coming your way right now.

**

RESTRUCTURING: AUSTRALIA TO SEEK NEW 500 KHZ HAM BAND

The old 500 kHz the international maritime distress frequency could become part of a new ham band down-under. This if the Wireless Institute of Australia has its way. W-I-A News anchor Graham Kemp, VK4BB, joins us from Brisbane with the details:

--

The WIA will shortly be writing to the ACA to request the establishment of an experimental amateur allocation at 500 kHz. Thats the 600 meter band.

WIA Director Glenn Dunstan VK4DU said "500 kHz was the international maritime Morse code distress frequency for most of the 20th century."

"It was the frequency used by the RMS Titanic to send her plaintive cries for help that April night in 1912. It was the frequency used by thousands of merchant ships to signal their plight in times of peace

and war."

"More often than not, 500 kHz was witness to a ship's Radio Officer's last moments. Many Radio Officers literally died at the key as their ship fell victim to enemy action or was overwhelmed by the forces of nature".

Glenn, himself an ex ship's Radio Officer, said. 500 kHz was replaced in 1999 by the Global Maritime Distress and Safety System (GMDSS), which uses a combination of automated terrestrial and satellite communications.

"Since the introduction of the GMDSS in 1999, 500 kHz use has declined rapidly. The last official users of the frequency, China, plan to discontinue operation in 2005. The frequency is no longer used in Australia, New Zealand, the Pacific or the US."

500 kHz has been instrumental in saving tens of thousands of lives in the last 100-odd years. It is thus fitting that the frequency be preserved as a 'spectrum national park' to commemorate those who paid the supreme sacrifice in its use.

"The best way to do this is to establish a small slice of spectrum around 500 kHz - probably 495 to 510 kHz - as an amateur radio band. The band would also provide a unique opportunity for experimentation with antennas, propagation, advanced narrow band modulation techniques and receiver digital signal processing." Glenn said.

--

It should be noted that 500 kHz is still allocated to the maritime service so any permanent amateur access in Australia or elsewhere is some way off. It is worthy of note that the I-A-R-U Region 1 and various United States Amateur long wave groups are actively pursuing an experimental allocation at 500 kHz as well. (WIA News)

**

HAM RADIO IN SPACE: ECHO ON THE AIR

AMSAT has announced that the F-M voice repeater on the Oscar-51 Echo satellite is on for a trial period. The transponder was turned on the 30th July for about three weeks during which command stations will be watching the power budget and adjusting the transmitter power for good management of the battery.

For those wanting to give Echo a try, its uplink is on 145.920 MHz F-M, with 67 Hz CTCSS tone. The downlink is on 435.300 MHz.

A reminder that this is a trial of the F-M voice repeater only. Please do not send any data through it. AMSAT says that the digital portion of Echo is not yet ready for use. (ANS)

**

THE BPL FIGHT: ZS AMATEURS SHOULD REPORT BPL TESTING TO THE SARL

Turning to news on the B-P-L front, South Africa AMSAT President Hans van de Groenendaal, ZS6AKV, has now spoken out. He is urging amateurs and short-wave listeners in that nation to report any unusual but consistent interference to the South African Radio League. This as the rollout of Broadband over Powerline continues in that country.

ZS6AKV says that South African hams must continue to be vigilant about any B-P-L testing taking place in their neighborhoods. Hans says that following Pretoria's example several other metropolitan areas have shown an interest and may soon be starting trials. (SARL)

**

THE BPL FIGHT: FOLLOW-UP ON SAN DIEGO GAS AND ELECTRIC

Back here in the USA, San Diego Gas & Electric has confirmed that it is considering entering the Broadband Over Powerline business, but for now that's about all the utility will say.

As reported last week, San Diego Gas & Electric planners are reported to be seriously considering endorsing and sponsoring Broadband Over Powerline data transmissions on the company's power distribution system. The story went on to state that San Diego Gas & Electric is also considering entertaining proposals to partner with vendors for one or more field demonstrations of BPL. This, this despite being advised that B-P-L will cause considerable interference.

Bob Gonsett, W6VR, whose CGC Communicator newsletter was first to break the story put in a call to the utility to try and get a bit more information. San Diego Gas & Electric response was brief and far from insightful. All that the utility would tell Bob is -- and we quote: "Like many utilities, San Diego Gas & Electric is assessing B-P-L technologies."

W6VR says that while we are all temporarily left in the dark as to San Diego Gas & Electric plans, those plans will eventually surface. As soon as they do, we will let you know. (CGC)

**

THE BPL FIGHT: NORTH CAROLINA UTILITY ENDING BPL FIELD TRIAL

Meantime, North Carolina's Progress Energy Corporation says it's completed Phase II of its B-P-L field trial in the Raleigh, and will be closing down the experiment. In an August 4th internal memorandum reported by the ARRL Letter, the company said its program to test the viability of providing broadband service to communities it serves will wrap up by the end of August. The company reportedly will shut down the system once it's able to move its BPL customers to other broadband providers. Progress Energy's decision comes on the heels of announced shutdowns of B-P-L field trials in Penn Yan, New York, and Cedar Rapids, Iowa. (ARRL)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Broward Amateur Radio Club net serving Ft. Lauderdale Florida.

(5 sec pause here)

**

RADIO LAW: HAM RADIO EXEMPT FROM CONTROVERSIAL SAN DIEGO WIRELESS SITING ORDINANCE

Wireless communication antennas would be allowed in San Diego, California's residential areas only as a last resort under a new policy recently approved by the City Council. By a vote of 7 to 1, the council has approved a new policy governing the design and placement of wireless antennas, making it more difficult for cellular carriers and others to erect towers in or near residential areas.

Under the new regulations, the process will differ according to location. Some approvals would be made at the staff level, while others would require an okay from a planning group, a hearing officer or the full Planning Commission.

In the past 20 years San Diego has processed over 1,400 applications for cellular telephone towers but the the city has not tracked how many were actually built but there is some good news for hams on this one. ARRL Southwestern Division Vice Director Tuck Miller, NZ6T, reports that amateur radio is specifically exempted from the terms of this new ordinance

More about the ordinance itself is on-line at http://www.signonsandiego.com/uniontrib/20040728/news_1m28wireless.html (CGC with further information from NZ6T)

**

RESCUE RADIO: COMMISSION SEEKS COMMENTS ON RULE CHANGES FOR EAS

The FCC has issued a Notice of Proposed Rulemaking concerning possible revisions to the Emergency Alert System or E-A-S system. The agency is seeking comment on how E-A-S can become a more effective tool for warning the American public of an emergency. It is also a chance for radio amateurs to suggest new ways that the E-A-S might be interfaced with our hobby to better serve the public in time of need. More information is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250534A1.doc (CGC)

**

WITH THE FCC: MANAGING THE DATA PROCESSING OF LICENSES

The FCC has a lot to say about the Universal Licensing System and some of the problems it faces in administering it. Especially those dealing with paper filings from the ham radio community.

Donna Scott, a Program Analyst with the Wireless Telecommunications Bureau in Gettysburg, Pennsylvania. And in a recent interview with Rain, he outlined just one of the most common situations that her office runs into. This one dealing with applicants who faili to provide their FCC Identification Number better known as an F-R-N:

--

Scott: "I believe that one of the biggest problems that we encounter are paper filings coming here to Gettysburg with no F-R-N on the application. The F-R-N is mandatory. This is the registration number that you obtain through the CORES database and without that number wee really can't accept that application. And we do have a high volume of paper applications that still come in without that number."

--

Probably the second highest volume of amateur applications that need to be returned are those from hams who do not read what's right in front of them. These are hams who insist on sending form 605 V-E-C to the agency. This even though the form 605 V-E-C is only for use by those who give the tests and not for the ham in the street filing paperwork with the agency:

--

Scott: "It clearly states that it is a 605 VEC form. It says do not send to the FCC on the top and on the bottom. Yet amateurs continue to send them here to Gettysburg and we cannot accept them."

--

According to Scott, the only version of Form 605 the FCC will accept from the ham community is the one that contains the approval statement from the governments Office of Management and Budget and that carries a current issue date.

This is only a fraction of the information that Donna Scott described about managing the nuts and bolts of the FCC's licensing system. There's lots more with her on this weeks RAIN Report. Its on line right now at www.rainreport.com or on the phone at 847-827-7246. (RAIN)

**

ENFORCEMENT: ELECTRIC UTILITY WARNED AGAIN ABOUT INTERFERENCE TO HAM RADIO

A Tennessee power company has been told that its response to an earlier RFI complaint is inadequate. The FCC's Daryl Duckworth,

NN0W, explains:

--

Audio report only. Download the MP3 newscast audio file at
www.arnewsline.org

--

The FCC told the utility that the it knows of no powerline noise problem associated in any way with guy wires. (FCC, RAIN)

**

ENFORCEMENT: $3000 FINE FOR UNLICENSED OPERATION

The FCC has issued Donald Donovan Jackson of St. Petersburg, Florida a monetary forfeiture in the amount of $3,000. This, for operating an FM broadcast station on the frequency 102.1 MHz without Commission authorization.

On November 23, 2002, agents from the Tampa Office observed a broadcast station operating on the frequency 102.1 MHz. A search of Commission records revealed no FM radio station licensed to operate on 102.1 MHz in that area. The agents then used direction-finding techniques and determined that the broadcasts originated from a commercial office building located in St. Petersburg. Field strength measurements taken near the sight of the broadcast indicated that the signal strength exceeded the permissible limits for a non-licensed station.

The agents interviewed the owner of the building who provided them with a copy of the lease for suite. He also informed them that a person named Donald Donovan Jackson operated the radio station from the premisis.

On January 15, 2003, agents from the Tampa Office interviewed Jackson and conducted an inspection of the station after again observing a radio station operating on 102.1 MHz. During the interview, Jackson admitted to leasing the property and operating the radio station from that location. He was given the usual 30 days to pay the fine or to file an appeal. (FCC)

**

RADIO LAW: DOJ WANTS MANDATED DIGITAL WIRETAP ABILITY

The Department of Justice says that technology companies should be mandated to ensure that law enforcement agencies can install taps on Internet traffic and new generations of digital communications devices. This as the D-O-J and other agencies press for a digital expansion to the Communications Assistance for Law Enforcement Act.

The Communications Assistance for Law Enforcement Act is a 1994 law that requires the telecommunications industry to build into its

products tools that U.S. investigators can use to eavesdrop on conversations with a court order. The investigatory agencys are worried that federal agents would not be able to install court ordered wiretaps against criminals who communicate using the latest digitally encrypted technologies. Lawyers for the Justice Department, FBI and Drug Enforcement Administration say that this need requires immediate attention and resolution by the Federal Communications Commission. (Published news reports)

**

RESCUE RADIO: HAM RADIO AT THE DEMOCRATIC CONVENTION

Eastern Massachusetts ARES was activated to support Public Service Agencies during the Democratic National Convention which concluded Friday, July 30th. The ARRL reports the Salvation Army, that the American Red Cross, and the Massachusetts Emergency Management Agency all helped out. ARES was ready to provide any needed support in case of catastrophic loss of the communication infrastructure that had been installed for the event. (ARRL)

**

RADIO IN SERVICE: FITTEST SEEKING ASSISTANCE

Those involved with Rescue Radio may find some appeal in this. The United Nations World Food Program's FITTEST operation is currently seeking Telecommunications Specialists for 3 to 6 month contracts.

FITTEST stands for the Fast Internet and Telecoms Emergency Support Team and it offers constant travel, constant pressure, constant challenges in a job that still allows you to combine a family life and a professional life in a two or three months on one month off duty regime.

Typically, FITTEST hires people with non-conventional career paths to provide emergency deployment of VHF and HF networks, Satellite and Telephone systems. They are looking only at people with direct hands-on experience willing to work under harsh circumstances.

To get an idea of the work they do in Iraq and Afghanistan have a look at their web sites. They are in cyberspace at http://www.hiciraq.org/mediacentre/gallery/FITTEST/ http://www.qsl.net/ya5t. Applications to mark.tell@wfp.org and martin.kristensson@wfp.org (WIA News)

ON THE WEB: BIG CHANGES AT THE QRZ.COM WEBSITE

Some major changes are taking place at the very popular QRZ.com ham radio website. We have more in this report:

--

Fred Lloyd, AA7BQ, who runs the QRZ.com website has announced major changes in access to posting access site. This, for registered users whose login user name is not the same as their ham radio callsign.

Basically, Lloyd says that only contributors who have legitimate ham radio calls will be permitted to post material to most areas of the website. To accomplish this Llloyd says that he has created two levels of membership. One called Ham is for those who want to use their call sign as registration login. The other will be the Guest member for those who may not have a call or who simply prefer not to use it.

Those who have a call and use it for login purposes will have full read and write access to all public Q-R-Z forums, plus the ability to make changes and/or additions to listings in the callsign database. Guest level members will be limited to posting on the sites Help Forum, the For Sale Forums, and the Questions and Answers Forum. These people will have no access to callsign database editing functions.

QRZ.com has also instituted several rules to help keep order and decorum at the site to make it enjoyable for the majority of those signing on. Among these are the right to terminate the current and future membership status of any user who engages in the harassment of any other user, staff member, or volunteer of this system or the use of any information derived from the website that contributes in any way to unsolicited e-mail of any kind. Also banned is the posting of obscene or offensive material on the site and QRZ managers say that they reserve the sole right to determine what is either offensive or obscene.

Lloyd says that the site will shortly begin converting current members to the new system. If you are currently signed up using your call sign as your logon I-D you need do nothing. For those who are not, QRZ we will be assigning new login names to those current members who are apparently licensed amateurs. The new logon name will be the same as the callsign that is listed in the QRZ call sign database as the 'Primary Callsign' for that account. Each user who is subjected to a name change will be notified via e-mail at the address we have on file for that user. Names that cannot be

associated with a callsign will be assigned to the Guest level of membership.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Lots more about the changes are on the QRZ.com website under the title QRZ System Announcement. Lloyd and the managers at QRZ say that they hope that these hanges will improve the website for everybody. (QRZ.com)

**

HELPING HAND: THE AUDIO NETWORK

The U-K Audio Network is a website for the blind using audio web pages, controlled by standard keyboard navigation. It is the first site in the world that needs no adaptive technology to be accessible by blind and partially sighted users.

There are many resources on the Audio Network. For example, it is the only place on the Internet where you can listen to BBC Radio schedules for the forthcoming week in audio. And speaking of radio, there is a whole section of radio stations where you can change channels at the touch of a button, without having to worry about annoying pop ups or filling out a registrations.

Best of all this website is free. Its located in cyberspace at http://www.yrguk.com (RSGB)

**

THE SOCIAL SCENE: DENVER IN AUGUST

Turning to the ham radio social scene, the Denver Radio Club Hamfest is scheduled for Sunday, August 22nd at the Jefferson County Fairgrounds in Golden. Doors open at 8:30 AM with door prizes awarded throughout the fest. For more information contact Bryan Steinberg by e-mail to kc0cua@arrl.net or visit the clubs website at www.qsl.net/q0tx (KCØCUA)

**

THE SOCIAL SCENE: CFMC IN ILLINOIS IN SEPTEMBER

And the Chicago F-M Club will hold its annual Hamfest and Flea Market on the weekend of September 18th and 19th. The venue is the Lake County Fairgrounds in the city of Grasyslake, Illinois. More information is on-line at wwwchicagofmclub.org. (E-mail)

**

HAM RADIO IN SPACE: ARISS AT HAM FAIR JAPAN

Amateur Radio on the International Space Station will be represented at the upcoming Ham Fair 2004 on Saturday and Sunday, August 21st and 22nd in Tokyo, Japan. The ARISS U.S. team provided photographs of the radio equipment in the Service Module to J-J-one-L-Y-U. He will display some of them along with a modified Kenwood D 700 E transceiver which looks like the flight radio. Other photos will be used in a slide show as part of an exhibit in the Kenwood Booth. Ham Fair is sponsored by the Japan Amateur Radio League with about 28,000 people is expected at the event. (ARISS)

**

SPACE: NASA APPROVES NEW DESIGN FOR SHUTTLE EXTERNAL TANK FITTING

NASA is moving ahead with plans to redesign a part of the Space Shuttle external fuel tank that investigators believe played a critical role in the Space Shuttle Columbia accident.

The Space Shuttle program will soon begin installing an improved bipod fitting that connects the external fuel tank to the Shuttle during launch. Investigators believe that during Columbia's launch in
January 2003, insulating foam from the bipod area fell off the external tank and damaged the left wing of the Space Shuttle. (NASA)

**

WORLDBEAT - BELGIUM: GALILEO GPS SYSTEM APPROVED BY EU

Officials in Brussels, Belgium say the satellite navigation system the European Union is planning will not clash with one already in operation by the United States. This, as an agreement signed in that European nation will make sure that the proposed Galileo system will be compatible with the U-S owned Global Positioning System.

Galileo is slated to begin operation 2008. Together the two systems are expected to become a single world standard for positioning and radio navigation. (ANS)

**

DX

In D-X, keep an ear open for GB6LOG. This is a special events station on the air through August 18th to celebrate the 60th anniversary of the Liberation of Guam during World War 2. The station will operate on all modes. QSL via the RSARS QSL Bureau to receive the special QSL from this station. For further information contact G0SWY by e-mail to G0SWY@aol.com (GB2RS)

And hams on Gibraltar have been granted permission to use the special prefix ZB300 during the month of August. This to celebrate the colony's three hundred years of British sovereignty. If you work ZB300, QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: SIGHTLESS UK NEWSREADER TAKES TO THE AIR

And finally this week the story of a U-K ham who has overcome physical disability to become a news anchor for the Radio Society of Great Britains GB2RS News. Jeramy Boot, G4NJH, in Nottingham has the rest of the story:

--

Now news about a new GB2RS newsreader. Annick Morris, M0HDE, of Wigan, Lancashire, became a GB2RS newsreader two when she read the news through the GB3MR repeater. What makes this special is that 18-year old Annick has been blind from birth.

She has a specially-adapted laptop computer which accepts Word files, and which has a single-line display consisting of raiseable dots which form characters in Braille. Annick can read Braille fast enough to read out loud from this, although she can only 'see' one character at a time.

In the future Annick will be newsreading on 6 metres, 2 meters and 70 centimetres and it is hoped that she may also transmit on two bands at once.

Jeramy Boot, G4NJH.

--

This is not the volunteer first job that M0HDE has been successful in. At age 14 Annick attended the "Child of Achievement Awards" in central London after impressing organizers with her determination to overcome obstacles presented by her disability. This award recognizes the efforts of young people under the age of 16 who make special efforts to overcome personal disability or illness while also managing to help others. We at Amateur Radio Newsline welcome Annick Morris, M0HDE, to the worlds ever growing ham radio news reporting teams.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

And this note. Because our staff will be in Huntsville to present the Young Ham of ther Year Award there will be no update on the 661-

296-2407 line on Friday, August 20th. Phone users are asked to utilize another of the automated phone lines operating in other regions. Our 661-2407 line will update to the latest newscast on Monday, August 23rd.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, and I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening. Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

The result would be chaos. All you have to do is tune around 160 a bit
to come to the conclusion that the ops who get on 160 are with very
rare exceptions a whole different breed of cat from the hordes of
HF-only spectrum dwellers from a number of perspectives. The
"misbehavior ratios" being one of those. If there was a simplistic
"unisolution" like you're proposing it would have been implemented
decades ago.

There's nothing in anythiing I've said, Hans, that makes this THE way for somoene to get into Amateur Radio...This is but ONE way.

This is not about "control"....It's about a way for TEACHING others to be licensed, SKILLED Amateur Radio operators.

There are already 675,000 people out there with Amateur Radio licenses who are "in control" of thier own actions and I hope there will someday be another 675, 000.

Sorry you think differently. Seems to me that those who yell the loudest about others being "in control" are themselves the ones worried about WHO is going to be in control.

Kinda like you.

> The cost of launching a satellite is too high. Aren't the existing
> staellite Internet services (DirecWay -- is there any other?) slow and
> expensive, and require a large outlay up front for equipment?

They can take any number of routes into existing satellite
capabilities which are both inaccessible and unaffordale out here at
the RRAP consumer level.

Very hypothetical example: Podunk Hollow County ND pays some first
tier commercial ISP which has a connection into the INTELSAT network
and pays them $10,000 a month for their connection. Could be AT&T,
Verizon, Comcast, etc.

Then Podunk Hollow County becomes a local non-profit ISP which puts up
a bunch of Wi-Fi nodes, signs up 2,000 of it's citizens as subscibers
to it's service and charges them ten bucks a month for the connection.
The $10,000 "profit" they appear to be getting in this scenario
actually goes into initial capital investment recovery, the sinking
fund and the system operating and maintenance expenses.

<mail@nomail.com> writes:

>Anyway, fit me into a peg:

An impossible job!

>Totally against welfare system -- totally

But what constitutes "welfare", Kim? Obviously you
mean the classic DPW stuff.

But what about unemployment compensation? Social Security
and SSI?

How about "workfare" programs, where people can get benefits only if
they work or go to school in a program designed to get them off the
dole?

What about corporate welfare?
>
>Pro-Choice (it's my body; the rest of the world be damned: yes, including an
>unborn child)

>Way anti-NRA (too radical), but believe in gun ownership with three laws:
>3-day waiting period, safety locks are a must, against the law to have guns
>in home out of locked safe or gun rack

How are we supposed to get the guns into the house and into the safe?

>Anti-Feminist

At first I was puzzled by this, because you've always seemed to me
to be a "neo-feminist" or "21st century feminist" - meaning you'd
left behind the radical strident "don't hold the door for me" additudes of the
'60s
(After all, pro-choice is a keystone of the modern feminist movement).

But upon further thought, I think what you're saying is that the "feminist"
label is simply too narrow and limiting for you to have it applied to you.
IOW, to you, it's not about "women's rights" but about everyone's rights.
And not about "equality" but about "reality".

Please do!

For example, what about public education? Environmental protection?
>
>But, I don't really think I am a liberal, or a conservative. Maybe I fit
>into one of those traditional pegs. I rather think of myself as a realist.
>And, I don't think I am wishy-washy at all. I am a definite (to the length
>of being called mean) "tough love" advocate.

For whom? ;-)

I find myself in a similar situation. On some issues I'd be called a
conservative and on others a liberal or even a radical. And everything in
between.

For example, I oppose BPL (that's a very *liberal* stand!). I also support
the right of law-abiding citizens to have and use firearms (a very conservative
stand). In fact, if it were up to me, all citizens (only citizens) would be
issued gun owner/user licenses which could only be revoked for certain specific
reasons (conviction of violent crime or conspiracy to same, certain mental
disorders connected with violent behavior or mental competency). IOW, don't try
to control the guns - control the users.

Or here's another: I support *serious* spending on public education - in fact,
I'd fund education all the way to Ph.D level (as long as the student kept up a

GPA acceptable to the institution and was working towards a degree.) "Liberal", huh? But at the same time, schools and students should have to meet serious academic and behavior standards - very "conservative".

Interesting stuff, Kim!

How long does it take a new ham to get the basics of operating
down anyway? A few hours of operating? Once he has a rig, antenna
and such set up. When I got my HF privrledes when I got my
"extra lite", I spent a lot of time listening to QSOs to try to figure
out the methods used. Then started responding to CQs and such.
One problem I find is that I can never remember the other guy's
callsign... But if it's a contester I just listen to subsequent
QSOs he has to get his call for the log. I don't compete myself.

Having a supervised only license is more brearucratic hassle than
that met learning how to operate anyway.

Hi Bob,

I feel that the idea of a "Here, Kid, let me hold your hand and show you how to be a ham" license would send absolutely the wrong message to new ham 'wannabes'.

Hard-wired into the bedrock DNA of the Amateur Radio service is the notion of experimentation, inovation, and "let's try and see if this works". The old Novice license, with it's elementary easy examination, and it's attitude of "Hey, kid, welcome to Amateur Radio --- now build a station and let's see what you can do with it" appealed to this trait. We should lobby like hell for a return to such a license, including the non-renewable nature of it, rather than some "store-bought-only-equipment-supervised-operation" license which would, IMNSHO, carve the very heart and soul out of the attraction of a ham license to the adventuresome tinker/experimenter mindset that we desparately need to attract.

Quite frankly, anyone who was attracted to such a structured supervised license environment doesn't belong in *MY* Amateur Radio service. (Watch LHA spin up his rotors over that comment!)

Has nothing to do with "The Pubs."

It was like this. The Congress critters are voted by "the people" to
look out for "the people's" interests. The Senate was voted by the
state's legislatures to look out for the state's interests.

What we have now are popular elections where both the House and the
Senate vow to look out for the interests of "the people." We now have
two branches of government giving away benefits to gain or keep
constituents.

Who pays attention to whether the States can afford to administer such
giveaway programs?

>>>By reducing the license tests to the point that there would be a class of
>>>license which did not allow unsupervised operation works against those
>>goals.
>>
>> WHO SAID "unsupervised"...?!?!..
>
>I did.

And what is wrong with a "supervised training license", Jim?

You're approaching this as if it were the ONLY way to do this.

I for one never suggested that.

>What we have now, and have always had in the USA, is the concept that a ham
>can
>operate an amateur station *unsupervised* within the limits of his/her
>license
>privs. And nobody else can.
>
>IOW, either you is a control operator, in charge and responsible, or you
>ain't.
>
>
>Your "student operator" idea would create an unnecessary intermediate step. A
>"licensed ham" who cannot operate unsupervised. Bad idea, I say.

Un-necessary to YOU, Jim.

Imagine...a whole new "crop" of licensees TRAINED as they learned....No
more nets interrupted...No more autopatches initiated in the middle of a
QSO...No more 10-4 good buddy language.

Yep...I can see how you might find that untenable!~

>>The "operator only" license idea is the
>>very epitome of "supervised" licenses,
>
>Which is a bad idea.

To you.

Not to the new students.

>>and would probably provide that
>>""skilled operator" a heck of a lot faster than the present "here's your
>>license now go learn" situation we have now!
>
>I don't see how.

Sheeeeesh.

By not having to "relearn" everything from the git-go...From HAVING a
knowledgeable, capable mentor to direct those "dumb" questions to.

All to the Orwellian doublespeak on 11 meters is the most obvous example
of what I am trying to avoid...The misadventures of many who either "thought"
that this was "the way" things were done because "no one told me..."

>>>There's no present need for a "student license" because someone who wants
>>>to
>>>learn amateur radio operating techniques "by doing" can do so without any
>>>license at all - *as long as there is a control op*.
>>
>> OK, Jim.
>
>Isn't what I wrote true?

Sure it's "true".

It's also not very productive.

See my comments above. Yet another "Novice" class without some kind of
mentorship will create a whole yet another subclass of Hams trying to reinvent
the wheel...Why not implement a REAL training-level license that REALLY trains
them...?!?!

>> And now the Technician Class does that. And......?!?!
>
>And the Tech is not the best we can do. For a whole bunch of reasons.

OK...Ante up.

>>Details, Jim...It assigns a trail of responsibility in the training of
>>the new ops.
>
>Why is that needed?

To put some quality into the program.

>>When the student has met the criteria for a "solo", whatever those final

Make a suggestion, Jim.

>>>Sure - but is that what's really best for amateur radio?
>>
>> I don't know...Do you?
>
>I think I do. I think it's not a good idea.

OK...So you make the rules Jim and the rest of us will just follow. Then
we will know who to blame!

>>The FCC get's a dozen petitions a year suggesting new license proposals
>>that will immeidately and undoubtedly save Amateur Radio from certain
>>impending failure.
>
>I'm not saying that at all. Just that there's no reason to implement what you
>suggest.

There's no reason to implement what NCVEC suggests either, but it made it
to RM status. It's a heck of a lot more dangerous to Amateur Radio than a
program that mentors trainees

>> Do YOU have >>THE<< one failure-proof idea? I Sure don't.
>
>It's not a question of perfect, but of better and worse ideas.

Sorry, Jim.

I don't acccept the idea of "Whelp...it's better than nothing..."

>>>>>The words "operate an amateur radio station" have an exact definition
>>>>>under FCC rules. It means to be in charge of the station, even is

>>>
>>>Point is, right now the term has a precise meaning.
>>
>> Uh huh.
>
>Yep.

You have yet to show me where in the Constitution it is prohibited from
changing federal regulation, or definitions within those regulations, Jim.

>> And tomorrow it may have ANOTHER "precise meaning".
>

>Until it is redefined, we should use it as it is defined now.

And with THAT suggestion, nothing at all will change.

I thought you were a bit more open minded than that, Jim.

>> I am not talking about TODAY'S Amateur Radio, Jim...
>
>Then don't pull a Vipul and use different defintions.

I am not trying to redefine TODAYS Amateur Radio with made-up words or concepts, Jim.

We are talking about potential FUTURE programs.

>> OK...Your opinion noted. 674,999 others to go.
>
>Has anyone here said the student operator idea is a good one?

Is this forum even remotely represntitive of a valid cross section of the Amateur demograpic, Jim?

I forget the exact numbers, but at one time we figured out that the "regulars" and "occassional" posters here (the one's we can verify as being licensed, active Amateurs) was something like 0.015% of the Amateur community.

>> And in my opinon, no...If someone wants to just dive right in, let'em.
>
>I predict most folks would do just that, rather than hunt down a mentor ham
>every time they want to call CQ.

They don't HAVE to "every time they want to call CQ", Jim...I didn't have to hunt down my CFI everytime I wanted to do some touch and go's after he signed me off as qualified. A student Amateur wouldn't have to either.

>>>Today, and for more than a quarter century, a person who can go for Extra
>>>"right out of the box". Would you change that?
>

Absolutely. And I already do.

>>And kids can get around.
>

>Depends where you live. You going to send your 9 year old daughter to a
>stranger's house 25 miles away?

No, but I'd TAKE her to a stranger's house and be there...Just like I did
when Samantha was in Brownies...Just like tens-of-thousands of other parents
take thier kids to "special activites".

>>>If I'd had to search for a mentor and wait around until both of us had
>>>available free time, just to operate, I'd might never have gotten past that
>>>stage. Instead, I was able to get a Novice license, build a station, and go
>>>on
>>>the air unsupervised. I don't see anything wrong with keeping that concept.
>>
>> Were you the exception or the rule?
>
>The rule.

Uh huh! =)

>> Shall we base ALL future expectations on how well you did...???
>
>We should base them on what works. The reality is that reducing requirements
>and pushing VHF/UHF hasn't done much.

=0

Jim...there was less than 400K Amateurs whe I got licensed...There's now
almost 700K.

There are more "coded" Amateurs now than in recent history.

HOW can you say it hasn't done much...?!?!

>>It also put's them in the MAINSTREAM of Amateur Radio by virtue of
>>exposure to 2 meters...The Amateurs Campfire, if you will.
>
>In some places. In others 2 meters isn't much.
>
>Why not set them down with a whole choice of options?

Why not? And why not provide them an option that provides them with a
structured training and qualification program?

Hans, where's the "wrong message" about offering a program that provides a structured training program for those that want it?

We ALREADY have a "wrong message" out there that says 'No one wants to help me and I have so many questions to ask..."

A program that identified qualified "mentor stations" and "training clubs" would directly couple these folks with people who want to help and have the knowledge and skills to help.

>Quite frankly, anyone who was attracted to such a structured supervised
>license environment doesn't belong in *MY* Amateur Radio service.
>(Watch LHA spin up his rotors over that comment!)

So as far as Hans Brakob is concerned, anyone who WANTS some sort of training to help them, they can get lost.

THAT sends a message, for sure.

I am sure most of us already know what the message is.

Go read the proposal on the ARRL site. You will see that AM is NOT being
regulated out of this proposal.

We did attack the right people. Terrorist camps existed in IRAQ. Paper
trails of the WMDs have been found.

Right now its too political of a climate to make any sense of it.

After Bush is re-elected you will hear it all.

Perhaps it escaped your notice, but such a nationwide program already exists, without big-government establishing a "supervised only, store bought rigs only" operator class.

At their web site ARRL lists all their affiliated clubs, including services those clubs offer such as organized training programs, club stations, etc.

They also have established a four-level mentoring program which include ARRL Club Mentor, ARRL Mentor, Interactive Mentor and Special Interest Mentor.

The ARRL Club Mentor will involve the participation of ARRL-affiliated clubs in close cooperation with ARRL Headquarters staff. Affiliated clubs will be encouraged to actively participate in this program to "mainstream" more people, licensed and otherwise, into Amateur Radio. The club mentor program also has the additional benefit of potentially increasing a club's membership as well.

The ARRL Mentor program will work through ARRL Headquarters. An ARRL mentor is a person with an interest in mentoring--or "Elmering"--new licensees who may or may not be members of an ARRL-affiliated club. ARRL Headquarters staff will support these mentors, who must be ARRL members.

The Interactive Mentor is intended to aid enterprising new hams via the ARRL Web site by providing answers to basic questions and through chat rooms, where discourse between new hams and mentors would help new hams to get on the air.

The Special Interest Mentor is intended to match people with interests in advanced, specialized areas of Amateur Radio technology with mentors who are experienced in these technologies.

Pure fantasy, Steve. I have 'Elmered' dozens of new hams (and continue to), am affiliated with the MNYARC (http://www.mnyarc.org/), am an ARRL registered instructor, a Handi-Hams volunteer, and am a contributor to the Ham-Elmer yahoogroup, just for a few examples of my contributions to the volunteer training of new hams.

But I don't support (in fact I vehemently oppose) the notion of "supervised operations only" ham radio license. If that makes me a "bad person" in your eyes, then I guess I'll just have to live with the horrible stigma of your disapproval. Why does that not bother me?

billybeeper@juno.com (William) writes:

>Hans, you saying, "*MY* Amateur Radio Service," just smacks of "Old
>Flatulencism."

Hans is a radio amateur. His use
of the possessive is common and
proper English. Just as someone
will speak of "my church", "my
school" or "my community" even
though the speaker does not own
them.

"LHA" is not a radio amateur, and
so cannot say it is "his" amateur
radio.

>(Sorry Hans, I >>>CAN"T<<< say O.F. or the Semi-Moral Minority will
>cane me. Hi, hi!)

You can write whatever you wish. But
then you must allow others the same
freedom. This seems to be a problem
for you.

>Numerous people wanted to join the amateur service because of the
>emergency service aspect of our hobby.

Whom? How many? Who are
these people?

>They may have no interest in
>building NE602 receivers or CW memory keyers.

Is that a problem?

>As such, the Technician
>exam is too complex material for a person with such intentions.

What is your solution?
Is the Technician test
so difficult that it
represents a barrier to
the entry of new hams?
Is it full of questions on
NE602 receivers and
memory keyers?

>On the other hand, a student license with mandatory hand holding is
>lunacy.

Not lunacy. Simply not
a good idea, in our opinion.

>So in the end, I agree to not have such a license class. But
>remember, Jim says that we need more license classes. Apparently it
>doesn't matter how he gets them.

To which "Jim" do you refer?
We have read posts here recently
from AA2QA, N2EY, and at least
one other "Jim".

The only one we recall who
has recently written about the
number of license classes is
the "Jim" with the callsign N2EY.
He proposed three license classes.

So it cannot be "Jim/N2EY" to
whom you refer.

Is there another "Jim" who "wants
more license classes"?

How many?

>

Nothing wrong with that at all. ARRL and hundreds of clubs across the country offer "structured training programs".

What IS wrong with your proposed program is the notion of "you can't operate with this license unless you're supervised".

Our beloved ham radio service has thrived over the years because a fundamental feature of its charter (97.1) is the encouragement of independent tinkering and just plain "I wonder if this would work" experimentation. It'd be a very stagnant and uninteresting place if that individual exhuberace were replaced with supervisors who taught only the "right way to be a ham".

If you want "structured", join MARS or CAP, where structure is important and very desireable for uniform and consistent styles of operation. Let amateur radio remain vibrant, free-spirited, and willing to try a lot of "crazy crap" just to see if it works if for no other reason. That's how many of our contributions to SOTA came about, not by "supervision".

In article <3tednUaw1MWLFYPcRVn-sw@adelphia.com>, Mike Coslo
<mcoslo@adelphia.net> writes:

>Nope, it's because they found something that worked once(get elected
>when you have less votes than your opponent) via the electoral college.

I think both parties support the electoral college - and for the same bad
reasons.

As I read it, the EC was created primarily because the founders didn't know how
the political parties would develop. What if there were multiple parties, and
nobody had a clear majority? Would there be a series of runoff elections, or
what?

It was also a way out of the mess of differing voting requirements in different
states.

Also a concern was the limitations of communication and transportation of the
time. That's why the elections were held in early November but the original
presidential inauguration date was in March.

And remember - these were the same folks who originally set up the EC so that
the winner got the presidency and the runner-up got the VP job...Bush/Gore -
there's a team for ya...

Of course what has developed in the intervening years bears no resemblance to
the founders' intentions. In most cases, if you're in a state that is heavily
for one or the other party, your vote doesn't really count, because it doesn't
matter how much of a majority a state has, it's usually winner-take-all (except
in "proportional" states).

The result is that campaigns aim at winning states, not voters. A state that
can go either way gets lots of attention and a state that is solid is
neglected.

This is similar to the primary system, where a few small states have a very
disproportionate effect on who the candidates are.

Imagine, though, if it were all wiped clean and we went to a couple of Big
Tuesday primaries and popular vote for president and vice president. The
pundits, consultants and other hangers-on wouldn't know how to play the game.

>The Pubs really like voting by proxy! 8^)

I dunno what's behind Keyes' idea, but do you think it has a snowball chance?

Those who want it can find Elmers today. But I wouldn't want to make
it a required path. Kids run into many requirements as it is, like
being required to study some foriegn language selected by someone else,
or history classes that are little more than preparation for Jepordy
or trivial presuit games.

Some of these mistakes would be "newbie" errors and the new ham will
likely spot the error and not do it again. And how many people
do autopatch anymore, now that cell phones are very common? I don't
have a cell phone, but I think in my 27 years of being a ham I
autopatched once or maybe twice. And
saying "10-4 good buddy" I don't see as a serious mistake.

>

If the new license requires manufactured rigs and low power,
it doesn't sound much different to a newcomer than getting a
CB setup. And CB doesn't require a license or supervision.
You want kids to choose that route? Actually I started in
CB back in 1976 and then decided to get the ham license as
I liked 2 way radio.

I have to disagree. A candidate who does not stand for majority of things that his/her party stands for is in the wrong party. Of course he or she doesn't have to agree with everything but should be on the same fundamental standard as his party. If a candidate is in a party simply because he thinks affiliation with that party will get him elected then I don't want him regardless of whether or not I happen to like him. He is a user not a doer.

Keep in mind that a party can bring a lot of pressure to bear on a party member to get them to "toe the line" thus even if the candidate appears to stand for the things you want, there is a very good probability that in the end they will follow the party line rather than the positions they stated in their candidacy.

So it would be wise to be extremely careful about voting for a candidate based on his stated positions without checking the party's position on those same issues.

As I read it, a major concern was that the small states with small populations were afraid they would be totally dominated by the large states with large populations. The two house system with the House members based on population but the Senate based on two senators per state regardless of size was intended to alleviate this problem. The electoral college concept was developed the way it was due to that same concern. No matter how small a state and/or its population was, they were thus guaranteed 3 votes in the electoral college.

Having lived in a rural farming community for a signficant portion of my life, I can understand this concern. The needs of the city dwellers are radically different than the needs of the rural communities. Cities could benefit from mass transit but it would be worthless and uneconomical in Utah or Montana or any number of farming states. City dwellers want/need cheap bread while farmers need decent prices so they can keep producing and live decently. These are diametrically opposed needs. There have been proposals that favor one at the expense of the other.

Based on the enforcement actions and the exam investigations, the FCC has only found need to investigate a tiny fraction of the tests conducted. This refutes your assertion that "plenty of Extras..." were able to "buy" their licenses.

What is "a snowball chance?" Why not finish the phrase?

I liked it best when Clinton said "SNAFU" and the whole Wash Press
Club went around babbling "SNAFU."

>
> Un-necessary to YOU, Jim.

Yep. IMHO.

> Imagine...a whole new "crop" of licensees TRAINED as they learned....

If they aren't trained, they haven't learned.

>No more nets interrupted...No more autopatches initiated in the middle of a
>QSO...No more 10-4 good buddy language.

The only way to have no more of that stuff is to outlaw it *and* to require all
hams to take the training course. If any new ham can bypass the student phase,
you cannot guarantee "no more" of the above.

> Yep...I can see how you might find that untenable!~

Does it really require a training program for new hams to learn not to
interrupt a net, initiate an autopatch in the middle of a QSO, or not use 10-4
good buddy language?
>
>>>The "operator only" license idea is the
>>>very epitome of "supervised" licenses,

All I did was read a little and listen to how other hams did it. And I learned
stuff like how to handle CW traffic that way.
>
> All to the Orwellian doublespeak on 11 meters is the most obvous example

11 meters isn't a ham band. It's a mess not because of lack of training but because of lack of tradition, standards, and procedures.
>

>trains them...?!?!

Suppose we fastforward to a time when FCC has acted on your suggestion and replaced the Tech with a "Student" class, and dropped the code test for General and Extra.

Which do you think most new hams will do:

1) Get a "Student" license, and only operate when a mentor says they can

or

2) Get a General or Extra and have at it full blast, unsupervised?
>
>>> And now the Technician Class does that. And......?!?!
>>
>>And the Tech is not the best we can do. For a whole bunch of reasons.

But first you had to qualify.

And the reason for student pilot status is that an untrained person at the
controls of a plane will probably hurt or kill hisself and others, plus
property. Radio isn't that way.

When flying, you cannot simply turn off the machine and walk away. But except
in a life-and-death emergency, you can simply turn off the rig. Or just the
transmitter.

>>>>Today, and for more than a quarter century, a person who can go for Extra

>
> Uh huh! =)

Yep. I knew very few Novices who had other hams in the family. Very few with
formal mentors. Most simply read books and got a little help here and there.

(now you can insert that old one liner: "He's a wonderful lover - he taught
himself..;-)

Then explain why New York state - just two months ago - paid for Erie
County ARES/RACES dualband antenna to be erected on the new
communications tower at the county EOC/Training Center, using federal
money obtained through DHS (a federal agency)?

>Things have changed greatly in the last 40-50 years, and most
>catastrophically during the government's rush to "absolute security"
>following 09/11/01. The "involved citizen" is honored in lip service
>only nowadays.

Then explain why NYSEMO has been paying (again with federal money) for
CERT (Community Emergency Response Team) training in an effort to
get more "involved citizens" ready to help in an emergency/disaster?

>Perhaps this is why the old guard at the ARRL is
>frantically trying to find a new look for the old ARES .. hoping against
>hope to cloak it in digital, commercial, internet garb (WinLink 2000) to
>make it appear more attractive to the federally-dominated emergency
>structures.

This statement strikes me as downright laughable. The WinLink 2000
system is designed to benefit *local* communities and the agencies
that serve them. While ARRL has approved the inclusion of the Winlink
2000 Radio worldwide digital email network for ARES, they are
certainly not forcing it down anyone's throats, it's simply a tool
that is there to be used by those who might find it useful - like the
ARES groups in Florida; in Harris County, Texas; in Riverside County,
California, and in Wisconsin.

That doesn't count the use of WinLink 2000 by the Virginia Department
of Health, and International Heath Services (IHS) of Minnesota, which
are medical organizations, not ARES or RACES organizations.

>Field Day used to be fun, any maybe it still is .. but it sure is
>pointless for anything serious ..

It is still fun, and it is anything but pointless to hams who are serious about the public service and emergency communications aspect of amateur radio.

>unless you're thinking we'll be
>tapping out CW on scavenged, converted transistor radios from our caves
>during the post-nuclear accident epoch.

If that's all you see at Field Day where you live, maybe that explains your attitude towards the whole thing. At this years Field Day, we operated not only CW but also phone, VHF/UHF, and PSK31, and we demonstrated SSTV, ATV, and APRS. All of this was done without commercial power, in a public place, and resulted in positive publicity for the hobby as two newspaper articles were published in response to our press releases and interviews conducted by a reporter who visited the Field Day site.

Frankly, as an ARES/RACES member, CW is the *last* thing I'd expecting to be using in an emergency.

VHF/UHF? Most definitely. SSTV? Possibly...our EOC is set up for it, and we do have members with digital cameras and the capability to use mobile or portable SSTV to take pictures at an emergency scene and transmit them back to the EOC for the emergency management officials to see. APRS? Also a high probability. You can run it with a PDA and a handheld with a simple interface, giving you some basic digital messaging capability along with the ability to glance at a map and see who is closest to a location where you need to send someone, thus keeping response times to a minimum.

Of course, learning and preparing for this requires team members who have a positive attitude about what they are doing. If that is absent where you live, you and your community has my deepest sympathy, but fortunately for the rest of us, not every locality suffers from the same negativity that you seem to...and I do not mean that as an insult but rather as a constructive criticism - if this is how things are where you live, well, if you aren't part of the solution, you're part of the problem, gray. Think about it...

It's happened. Locally, there was a case from about 1991 where a teacher
went on trial for doing things he shouldn't have. The stories specifically
mentioned that he lured the boys in through computers and amateur radio.

I vaguely knew the guy, but from the details I even knew one of the victims.
And the ham who went to jail for this achieved a certain prominence due
to some articles in the ham magazines where many hams might recognize his
name.

So, if we get rock-solid, concrete intelligence that some
anti-American nutcase dictator, such as the now-deposed Saddam
Hussein, or the recently pacified Moammar Ghaddafi, had gotten hold of
some nuclear weapons that he had stored a location X and was gojng to
use them against civilian targets in the United States, you're against
sending out a couple of F-15 Strike Eagles to flatten location X,
until *after* said nutcase dictator has incinerated a few million of
your fellow American citizens?

Israel did conduct a military first strike (using F-15's even) on Iraq
a number of years ago, to keep Iraq from producing nukes back then.
They were roundly condemned for that action. Good thing for our troops
in Saudi Arabia and Kuwait during Desert Shield and Desert Storm (and
the subsequent Desert Fox, Northern Watch, Southern Watch operations),
that the Israelis conducted that preemptive air strike. The Scuds were
bad enough, without Hussein having had the capability to lob nukes
into neighboring countries.

Probably not. But my point in this whole thing is a party that can take
power while getting less votes tha it's opponents is probably going to
be enamoured of the process, and having elected representaties elect
(appoint) other representatives would be just dandy in their eyes.

He's done nothing to prove it incorrect.

In the alternative, let's assume that I am wrong: In that case, his news gathering efforts are 900% more costly than that disclosed by his "competitors" (I only need to compare against one competitor to prove that), and as such, people should then be supporting the more efficient services, not his. That in itself is reason enough to divert contributions elsewhere.

>Define that for me. Are you talking about when a company whines, "oh gosh,
>we weren't frugal and carried on with our unguarded spending and...oh
>gosh...now we need you--the US Govt.--to bail us out"? Nope. Nada. Too
>bad. And too bad for whatever consumers or sadly, employees, may be hurt.
>Ya run a business right or ya lose. Period. Ya notice a company being so
>wasteful that it's going to sink someday, ya get out. Period. End of Game.

Corporate welfare comes in all sorts of flavors, some of which are highly
ingrained.

For example, the tax deduction for home mortgage interest is a form of
"corporate welfare" for the real estate industry. Imagine if that deduction
were eliminated - fewer people would buy houses (new and used), house prices
would drop, realtors, lenders and other connected workers would lose business,
etc.

Or consider the airline industry. Put aside the whole security issue for a
moment, and just look at the basic business of running a passenger airline.

Airlines don't build airports, they don't fund the air traffic control system
nor the aviation part of the National Weather System. But they benefit from
those resources, all of which are built for them by tax dollars. Corporate
welfare?

Or look at the interstate highway system. Corporate welfare for the trucking
and bus industries? Before anyone says "Trucks pay road-use and fuel taxes",

note that research showed that *one* 18 wheeler does as much wear to a typical road as *7500* pickup trucks. Note also that bridges and overpasses have to be built much stronger for truck traffic, and that bridge/tunnel clearances, road grades, lane widths and curvatures are all defined by the needs of large-truck and bus traffic, not passenger cars or small trucks.

Or what about "incentives" given to companies to locate plants in a given area? Usually these take the form of tax reductions - are they corporate welfare, because everyone else shoulders the cost?

>> >Pro-Choice (it's my body; the rest of the world be damned: yes, including
>> >an unborn child)
>>
>> >Way anti-NRA (too radical), but believe in gun ownership with three laws:

>on their hips or breast, etc. It didn't bother me a bit. But, those people
>have also grown up for generations just like that and are probably (have no
>proof) very responsible gun owners/users.

The proof is in the per-capita death-by-gun rate there, broken down by motivation to use the gun. I suspect that in VT most death-by-gun is genuinely accidental, probably followed by suicide, rather than crime-connected.

>> >Anti-Feminist
>>
>> At first I was puzzled by this, because you've always seemed to me
>> to be a "neo-feminist" or "21st century feminist" - meaning you'd

>statement (like you love to do) then so beit. Because that is exactly what
>I think.

Then I got it right!

>I don't want to "get" something out of life because I am a woman.

At first I saw a contradiction between that and your desire to stay home and be supported by a man. But then I realized there's a big difference between *wanting* to be taken care of, and *demanding* it as a right, just because of personal plumbing. So there's no contradiction.

>I want it because I earned it. And, if you're a man who gets it because I
>am a woman, don't be 'specting me to laud ya as a respectable humin bein'.
>Yer a snake in the grass and you knows, I knows, and that's all we need to

>> For example, what about public education? Environmental protection?

>This is a thread that could get real deep and complicated right up front.
>ANY program that causes deliberate misspending of funds, too many fluffy
>jobs, and too much idiocy in it, I don't support. Public education is about
>spending what it takes to train the best-of-the-best teachers, having the
>best-of-the-best schools EVERYWHERE--not just in the rich neighborhoods, >and
>telling parents that they'd better stop thinking of school as a good way out
>of daycare, etc.

I agree 100%. The problem is that there's a sort of self-selection there: the
folks who are really concerned about quality public education tend to move into
the good districts, pay the high house prices and taxes, get involved, etc. And
the reverse. The joke here in Radnor Township is that people move here for
three reasons: School district, school district, school district.

>Environmental protection should be about nothing but good science, and
>that's all there is to it. And, I am a bit extreme on this and I know it.

>We are humans. We are defacing this world. That's a fact. We are going to
>continue to deface this world. That's a fact.

Agree 100% - the important question: Is the defacement worth the benefits?

>Extreme Example at high, simplistic level: If I am a human who, either by
>choice or because enough of my fellow humans allow it over my wishes, is
>living in a nuclear age and it's my state that is causing nuclear waste;
>then it is my state that must take care of it IN MY STATE. What right do I

>Corporate ventures look elsewhere to build or employ.
>Other states become desirable for living, playing, and working.
>My state decides maybe nuclear whatever wasn't worth it after all.
>My state ends nuclear whatever.
>Other states see this.
>Environmental problem taken care of...maybe other states don't do nuclear
>whatevers.

I *like* it! "You want the benefits - you take the risks!"

Trouble is, in big states there can be a rift between the benefits and risks.
New York City gets significant power - but minimal risk - from a nuke plant on
Lake Ontario (still in New York State).

>> I find myself in a similar situation. On some issues I'd be called a

Agreed! But it's not just a Republican problem. While the Dems lost this time because of that system, I think they'd be against changing it because *next* time the shoe could be on the other foot.

Personally I think that the main reason Gore lost was Clinton. Usually, being the incumbent VP is a big help (Papa Bush, for example) but in 2000 it was an albatross.

And most of all, they'd have to re-think every bit of electioneering wisdom if a switch was made from electoral to popular voting. I don't think either side wants to go through that, and the chance of losing a winnable election if they guess wrong on how to do the changeover.

> it became null and void.

No argument there! The novice was one-year nonrenewable from its
inception in 1951 to 1967, when it became two-year nonrenewable. (And
"non-retakeable" - one to a customer.)

The dispute was whether the year started when the initial application
was made, or only when the license was actually issued. With the
processing delays of those times, the difference could be weeks or
even months!

All the Novices I knew in the '60s and later received their licenses
only a day or two after the effective date. But in King Zulu's case,
the license date was *months* before it arrived - close to the date of
the initial application.

> He upgraded before the year ran out, and
> they dropped the "N" from the prefix, and he's held that call since.

Yep. The letter V was also used, as in WV2ABC. Don't know why they
needed two special Novice prefixes...

There is a significant number of politicos that think that too, but not in the way that you think. Gore was so intent on *not* connecting himself with Clinton that he may have done himself damage. Strange but maybe true. I know that by the time the impeachment happened, I was more angry at the pubs for taking such a trivial thing to such great lengths than I was at the initial stupidity of having a fling and then lying about it.

> And most of all, they'd have to re-think every bit of electioneering wisdom if

Here I would disagree. Of course this is a "what if" situation, but I'd wager a months paycheck that if Gore won under the same circumstances, there would be a *HUGE* effort to eliminate the Electoral college. We would have spent the last four years inundated by whining and hand wringing.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of August 15, 2004:

Novice - 30,707 (decrease of 18,622)
Technician - 263,316 (increase of 57,922)
Technician Plus - 57,609 (decrease of 71,251)
General - 139,236 (increase of 26,559)
Advanced - 79,166 (decrease of 20,621)
Extra - 105,659 (increase of 26,909)

Total Tech/TechPlus - 320,925 (decrease of 13,329)

Total all classes - 675,693 (increase of 901)

I have administered plenty of test sessions and know many Extra class
operators. None of them "bought" their licenses. They legitimately passed
the required testing.

Between the FCC data and personal experience, the evidence continues to
refute your assertion. What data do you have to justify your opinion?

That too!

A compromise based partly on the British House of Lords and House of
Commons.

> The electoral college concept
> was developed the way it was due to that same concern. No matter how small
> a state and/or its population was, they were thus guaranteed 3 votes in the

That makes sense for 200+ years ago, same as my reasons stated above.
But I don't think the founders ever intended for the system to permit
a candidate who did not get the most votes to be elected.

> Having lived in a rural farming community for a signficant portion of my

> decently. These are diametrically opposed needs. There have been proposals
> that favor one at the expense of the other.

Agreed - and the same problem exists in many states. In fact, there
are few true farming states left - many (like Utah) also have major
urban centers. Probably the best example is California.

And it's not just city slicker/vs/farmer. Look at my home commonwealth (Pennsylvania) and adopted home state (New York). They have multiple interests - big city business, city and noncity industry, farming, wilderness/nature/conservation, etc. All sorts of that, even in the same state.

Go up into the Catskills and there are big beautiful lakes which the farmers and other locals cannot use - because they "belong to" NYC's water system. Which until recently wasn't even metered.

Power lines cross the state to feed Niagara Falls hydropower and the output of a nuke plant on Lake Ontario to NYC.

Taxes? Ask AA2QA.

Here in the Keystone, the interests of Philadelphia and Pittsburgh are often at odds with those of the rest of the state. Heck, the suburbanites argue with the city dwellers about the wage tax...(if you live or work in the City of Philadelphia, you pay a wage tax of over 4%. Never mind that if you don't live there you cannot vote there, but if you live there and don't work there, or don't work at all, you can vote there...)

Bottom line: I don't think a system that elects the candidate with less than the most votes is acceptable. Makes a mockery of democracy.

The founders were not concerned with the popular vote. They actually did not trust the common man to vote "responsibly." Now I do NOT say that that was good but simply that was the situation in existence. Notice also that the constitution does not state how the members of the electoral college are to be selected other than that the states will choose their representatives. This also illustrates that the founding fathers were not concerned with the popular vote. Thus a state could have legitimately devised systems simply to have the state legislature or governor appoint them for example rather than have the population at large elect them.

> [snip]
> Bottom line: I don't think a system that elects the candidate with

I do not agree that this makes a mockery of democracy. It would have been just as legitimate to have set up a system where each state got one vote for example with the citizens voting to determine which way their state went. We are still a union of individual states.

The electoral college system has worked reasonably well for over 200 years. Yes it occasionally gives us a minority president but that is not necessarily a bad thing. Nor would the founding fathers have objected. They wished to balance the needs of the various areas and interests and this was the mechanism chosen. When we get a minority president, it simply shows that state's needs are being balanced between the disparate needs of the many states.

Also keep in mind that a pure democracy is impractical in anything larger than a small village. We are a representative republic. We choose representatives, including the electoral college, to act on our behalf. Although the system has its flaws (the representatives don't necessarily make good decisions), on the whole it works pretty well.

It does.

> It would have been
> just as legitimate to have set up a system where each state got one vote for
> example with the citizens voting to determine which way their state went.
> We are still a union of individual states.

Legitimate doesn't necessarily make for "right". The present system us
just as "right" as gerrymandering a district that has a 30 foot
corridor, usually a road, to connect two areas together so that the
party in majority can add to it's numbers, I don't care what party does it.

Any electoral system that allows the person that gets the most votes to
lose is engaging in Minority rule.

> The electoral college system has worked reasonably well for over 200 years.
> Yes it occasionally gives us a minority president but that is not

Sure - we elect them, then they make the laws. If they don't do a good
job, we vote 'em out.

But!

The main problem I see with your logic is that say there is an elected
person that doesn't do a good job, and you would support a system that
would allow that person to retain his or her elected job, despite a
majority of the voters voting for someone to replace the person.

Law of unexpected consequences in action!

Independants rarely get elected. And so...

If a candidate is in a party simply because he
> thinks affiliation with that party will get him elected then I don't want
> him regardless of whether or not I happen to like him. He is a user not a
> doer.

Yes you do. Because of Party affiliation, they get campaign dollars
that persuade you to vote for them.

How many campaign dollars do independant candidates get from the
Republican or Democrat Parties?

> good buddy language?
>

Some of this would require that the newbie know what nets are and what they "sound" like on the air, and also have some common curetesy. Also realize that autopatching is something of a burden on the host machine, and casual use to be avoided. But if a traveling ham comes to town and needs to call the people he will be visiting, I'd let him use it for a few minutes.

Hopefully the newbie will know not to "rachet-jaw" on ham radio like some people do on CB.

The novice license must have been quite popular in some call districts.
maybe in California?

I've heard some people say that I have a "novice" callsign WA2ISE.

Phonetics for the V novice: West Virginia 3 alpha bravo charlie...
(if they had phone)

Would it be too much to ask to ask you to please get your stories
straight, Hans...?!?!

In the post that I responded to, you specifically stated that anyone who
WANTED a structured, mentored systems was not welcome in "(YOUR)" Amateur Radio
Service.

> have 'Elmered' dozens of new hams (and continue
>to), am affiliated with the MNYARC (http://www.mnyarc.org/), am an
>ARRL registered instructor, a Handi-Hams volunteer, and am a contributor
>to the Ham-Elmer yahoogroup, just for a few examples of my contributions
>to the volunteer training of new hams.

Hoooray for Hans.

I've mentored folks too. This is just one other suggestion on how it
might be done.

>But I don't support (in fact I vehemently oppose) the notion of
>"supervised operations only" ham radio license. If that makes me a "bad
>person" in your eyes, then I guess I'll just have to live with the

Quite frankly, anyone who was attracted to such a structured supervised license environment doesn't belong in *MY* Amateur Radio service.

UNQUOTE.

Verbatim, Hans. You said it...anyone can follow the thread.

So...Anyone who didn't/doesn't "do it" the way YOU did is unwelcome.

It really is THAT simple.

It's a terrible thing, and it happens all too often. And it's going to
happen wherever parents fail to supervise thier kids. Too many parents are
ready and willing to drop Johnny off at (enter name of program, place or
facility) without exercising SOME sort of oversight. This doesn't mean looking
over thier shoulder 24/7, but "unscheduled" visits are a great way for parents
to get a good idea of what's going on.

The "WN" and "KN" were the Novice parallel for the "W" and "K" Tech
calls in the era when one could hold both. When the "K"/"KN" calls
ran out, they decided to go to the "WA" calls, and "WV" (V for noVice)
became the parallel.

>Len, chin up. You're a lot better off than "not even close, but make
>up for it by yelling alot."

No problem. :-)

The TN Kommander of the Kookoo Klutz Klan allus did have a
time orientation problem. My house was built in late 1962. I
bought it in early 1963, full payoff on mortgage in 1983. Land
behind house was undeveloped until 2001, the walled community
(44 houses) was finally finished in early 2002. So, I "almost"
got there 39 years before the fact? :-)

Nursie also has problems with fancy arithmetic, but that's his
problem not mine. Had 24 year mortgage paid off early, not
the 30-year typical of today.

Also had a full career in electronics-radio, retired from it. Not an
"almost" as that dingdong dipsnit thinks. :-)

Poor nursie. ALMOST had a point...which plonked (as usual).

>"Sorry Hans, $999,999.99 >>>DOES NOT<<

This house might manage to fetch about $400 K on open market
right now. Don't intend to sell just yet. Not an "almost" but just
a future that might or might not require selling. Only thing bad
about it is all the hills blocking low-to-horizon-for-good-skip to
north and east. Mr. Nevis has to do propagation in that azimuth
quadrant. Nothing is perfect. Except "Quitefine" and all the
PCTA extras.

Dingdong dipsnit still doesn't understand that original house
price of $30,500 in 1963 was considered "high." Hi hi. :-)

it.
>
> Any electoral system that allows the person that gets the most votes to
> lose is engaging in Minority rule.
>

But we often have a president who gets the majority of the popular vote but
gets only a very small minority of the states. That tramples all over
state's rights. That is just as "bad" as a president who has received only
the minority of the popular vote. Keep in mind that the states were very
adamant about state's rights being protected as a part of forming a union.

>

It was one reason not the only reason. State's rights was another reason.
As for trusting the common man, it depends. Some days I am optimistic and
others pessimistic.

>

No I neither said nor implied any such thing. For the president, we are
looking at a system that attempts to balance what the majority of states may
want versus what the popular majority may want. At the presidential level,
this is a necessary balance. At all other levels, a different system is
both desireable and necessary.

As I said the system is not perfect but when you have to balance various
needs, an imperfect system is going to be the result.

> Law of unexpected consequences in action!
>

Not necessarily. We have our local, state and national systems in place and working. To change them could lead to the unexpected consequences of which you speak.

>> a candidate who did not get the most votes to be elected.
>
>The founders were not concerned with the popular vote. They actually did
>not trust the common man to vote "responsibly."

I think that varied with which founder. There was also the slavery issue (do slaves get to vote? do they count in the census that determines representatives and electors? No and Yes - well, 60% yes) and the female suffrage issue (didn't at least one colony allow women to vote?)

>Now I do NOT say that that
>was good but simply that was the situation in existence. Notice also that
>the constitution does not state how the members of the electoral college are
>to be selected other than that the states will choose their representatives.
>This also illustrates that the founding fathers were not concerned with the
>popular vote. Thus a state could have legitimately devised systems simply
>to have the state legislature or governor appoint them for example rather
>than have the population at large elect them.

I think those elements were compromises to get the thing ratified - just like the compromise on slavery. Note how the thing was amended almost immediately (Bill of Rights). They viewed it as work-in-oprogress.

But you are correct that popular majority voting wasn't a universal value to the founders.
>
>> [snip]
>> Bottom line: I don't think a system that elects the candidate with
>> less than the most votes is acceptable. Makes a mockery of democracy.

>just as legitimate to have set up a system where each state got one vote for
>example with the citizens voting to determine which way their state went.
>We are still a union of individual states.

I disagree! But now we're down to opinions.

So let me say this:

Given the progress we've made in over 225 years since the Constitution was written, what would be wrong with "one person one vote"?

>The electoral college system has worked reasonably well for over 200 years.
>Yes it occasionally gives us a minority president but that is not
>necessarily a bad thing.

It's one thing to have a minority president when the vote is split between many candidates so that nobody has more than 50%.

It's quite a different thing for the election to go to someone who did not get the most votes. What is says is that your vote *for a nationwide office* is worth more or less, depending on where you live.

>Nor would the founding fathers have objected.
>They wished to balance the needs of the various areas and interests and this
>was the mechanism chosen. When we get a minority president, it simply shows
>that state's needs are being balanced between the disparate needs of the
>many states.

Why should states matter more than citizens?

Are we citizens of the USA first, or citizens of our states first? Is my primary loyalty and citizenship to America or Pennsylvania?

>Also keep in mind that a pure democracy is impractical in anything larger
>than a small village.

The Swiss do it.

>We are a representative republic. We choose
>representatives, including the electoral college, to act on our behalf.

A system that was developed when communication and transportation were much different than today.

In any event, there's something basically wrong with a system that elects representatives that do not get the most votes.

>Although the system has its flaws (the representatives don't necessarily
>make good decisions), on the whole it works pretty well.

But it can be improved.

No Vice - I like it!

However, when I got my Novice in 1967, I was issued WN3IYC. Then when I upgraded, I got WA3IYC. Never heard a "WV" on the air (but I did work WV)

I wonder if someone could get their old WV Novice call back under vanity? Would be really unique!

Jim, nice to see that you do have a bottom line. Like the 13th amendment that you wouldn't comment on, your understanding of this nation's government is lacking. This is a Republic. We have representative government. The candidate that is in the White House did receive a majority of the vote - from the electoral college. As it's supposed to be. No mockery involved.

Except that Gore couldn't carry his own state, and voters in Florida were rounded up from every bus station and from under bridges and couldn't vote themselves out of a wet paper bag if their next bottle of Ripple depended on it. If either one of those situations were reversed, you would have your candidate in the White House. Hi, hi!

You are free to petition your government for change at any time - no need to wait for an NPRM.

Best of Luck, bb

I've known a few amateurs that
came over from the CB world.

They transitioned nicely.

I'm still waiting for the Mongol
hordes to invade amateur radio.

Is that what your monthly numbers are showing?

We have only 901 more hams today than we had when the whole restructuring
business came into being more than 4 years ago. (Some "professionals" can't
seem to even get a Technician license out of the box, despite the reduction in
written testing as well as code).

Total growth of 901 in that much time isn't healthy. Reducing the code test to
just 5 wpm did not result in sustained growth, and neither did reducing the
written tests.

It's the same principle. Should a state governor be elected by an electoral
college - or would that be an electoral high school? Different parts of the
same state have widely different views and needs.

The founders weren't afraid of such changes - why should we be? What they did
was far more radical than going to popular vote for pres and VP.

I know quite a few WA7's who had those calls issued as novice calls.
The FCC started issuing WA7's in the very early 1970's when the KN7
and WN7 prefixes were used up. One of them a friend of mine had a KN7
call, moved to Sydney, Australia for 2 years, came back, and was
issued a WA7 call.

Easy, they (local entity) won't have to.

Sure, there's DirecWay, then there's Starband, and soon there will be
a third player, WildBlue.

Unless it's about 1950's era rear-area Army relay stations, SINCGARS, or why AMATEUR Radio should be run like MILITARY radio, Lennie won't have nothing to do with it.

He can't. He doesn't have any other experience in radio operating to the contrary.

Probably too little, too late. People
just don't want to learn the code. Either
that or people just don't want to become hams.
We have an insider who might be able to shed
some light on those issues.

It's difficult for people to develop an interest in ham radio when they have never heard of it. Most people that I know who are not hams never even heard about it until they met me.

>you're home and you feel you need your gun with you, holster it, or
>whatever. It's that simple.

You stated you felt it should be illegal to have guns in the house
unless they are in a locked gun safe or gun rack. What do you think
they'd do, Kim, write a law that says "Except when you're going to bed
or when you think you need it?" Either it's legal or it isn't.

In Buffalo (which I live near) they have a problem currently with home
invasions. That's where a bunch of thugs burst into people's houses in
the middle of the afternoon, tie up and assault the occupants, rob
them, rape them, and then kill them. What good is the gun if it's
locked up in a safe? What good is it if you don't have it handy when
you nnedd it - period. That is the point i was trying to make.

>BUT, you can't tell me you need all your
>guns/rifles out all at the same time, and you can't tell me that it takes
>too much trouble and energy to keep them locked up when you don't need them.

I happen to own two guns, a shotgun and a rifle. No, I don't need all
two of them out at the same time. To begin with, only a fool would
select a .30 caliber rifle for home defense. The shotgun, however, is
another matter entirely - and it is useless if it is locked up in a
safe when half a dozen punks kick down the door unexpectedly and come
rushing in with a few knives, a crowbar, and the intent to have their
way with any and all female occupants of the house they have just
invaded and taken over...before or after they carve their initials
into them with the knives, and eventually, kill them.

If you want to think it's stupid to have the gun loaded and handy even
in mid-afternoon, I guess you're welcome to that opinion. For your
sake, I hope you never have to rethink your opinion while naked and
tied spreadeagled to a bed with a knife against your throat and a
strange guy climbing on top of you...but I suspect you'd feel
differently at the moment if you did. Unfortunately, by then it's much
too late, isn't it?

>Stupidity, gentlemen, is why gun ownership is in the trouble it is today.
>Now, go and figure out why you couldn't think of a logical way to handle

>whether you need to have guns/rifles around in the first place.

Well, like I said...let me know how you feel about this issue after
you've become a victim of a violent crime because you decided not to
be prepared to defend against it. Asssuming you live to tell about it.

>
>Oh, and coincidentally: I have never attacked anyone for feeling like they

>miserably) to belittle someone for how they would handle a very dangerous
>situation, is remarkably ignorant. IMNSHO.

You wouldn't be attacking, Kim. You'd be defending. Hmmm...let's
see...people break into your house, smack everybody around, tie
everybody up, have a go at all the women, empty the place of all
valuables...you're going to trust them not to kill everybody because
you were a good little girl and didn't shoot them while they were
doing all this?

I don't think you understand the criminal mindset. Dead people don't
testify in court. You're trusting your life to people who have no
respect for life. Your call, of course, to determine how much you
value your life and those of the people around you.

Hmmm...you think it was snide and ignorant of me to point out that there are people in this world that want to kill you and me and our families and would stop at nothing to achieve their aim?

> Oh, and I notice you didn't mention at all, North Korea--whom you
>and the current Administration so conveniently ignore when defending a
>posture for "protection from nuclear/chemical/biological harm." Why are you
>ignoring North Korea in that mix?

North Korea does not have a delivery system capable of executing such an attack in the conventional sense (i.e., either by naval forces or by air). In fact, their navy could easily be handled by the U.S. Coast Guard, were they to be stupid enough to try to attack us with it, and the air component of their armed forces isn't designed for long-range missions at all. Their aircraft would run out of fuel long before they reached U.S. airspace - and they do not have aerial refueling capabilities.

Any attack from North Korea would have to be more along the lines of a terrorist action. This is of course a distinct possibility, and in fact, in light of Ghaddafi's recent turning over of a new leaf after seeing how quickly our military steamrolled Saddam's supposedly elite Republican Guard in not one but two military actions (Desert Storm and Iraqui Freedom), North Korea is probably an even better example than Libya in my scenario.

Thus...if we developed concrete intelligence that North Korea was in fact planning to perpetrate an attack (nuclear, biological, chemical, whatever) on U.S. soil - you would not support a preemptive military action to prevent it? You'd have us wait until after they killed thousands of civilian noncombatant Americans before we do anything about it?

If so, I'm sorry to say, but if that's the case then I'm not the one being ignorant here. It has happened in other countries. September 11, 2001 showed that it can happen here as well. The subway gassing in Japan, what if that was BART or the NY subway system? Or the trains bombed in...was it Spain? What if that was in Grand Central Station during the morning commute time?

You're telling me we should not use the U.S. military ahead of time to prevent such an occurrence should the opportunity present itself for

us to do that?

>And, you're ignoring other, terrible,
>mean, and nasty dictators, as well. You don't seem worth much for
>communicating with.

It was not my intention to list every single potential threat to the United States, nor should it be necessary for me to do so in order to make the point that multiple threats to the security of the United States do, in fact, exist, and that I do not I feel we should just sit here with our collective thumbs up our keisters and wait for them to kill a few thousand of us on the way home from work some afternoon before we do something about it.

If someone were to walk up to you tonight at 10:00 PM and tell you...OK, Kim, at exactly midnight I'm going to come over and smack you upside the head so hard you're going to see stars until the sun comes up...at the very least you're going to sit there and *watch* that person along about 11:58 P.M., aren't you? And if they get up and start walking towards you at 11:59, I doubt if you're going to sit there and stick your chin out and dare them to knock your block off. Yet this is tantamount to what you are recommending we do with our military if you arbitrarily impose a no-first-strike policy with respect to our forces.

The best defense really is a good offense. The person who threatens to smack you at exactly midnight...if you knocked him or her on their ass at 10:00 when they made the threat you wouldn't have to be worried about 'em at midnight. Think about it. :-)

Probably not - that is, if we're talking about customers directly
accessing the
satellite. While there's definitely a future for satellite comms, the
"last mile" problem combined with the enormous bandwidth of fiber
limits its usefulness as a general-purpose broadband access method.

Say you orbit a new, state of the art satellite. How much bandwidth
can it provide to how many customers? Compare that to what is
available in a single fiber. Also remember that once the duct is in
place, pulling another fiber isn't that expensive, and that new
technologies permit more bandwidth in existing fibers.

--

One thing the BPL folks downplay is that they really only use the
power lines for customer delivery (the "last mile" or so). Which could
almost always be done better by some form of Wi-Fi, DSL, cable, or
(yes) satellite.

No need, Hans.

There are SOME people here who have thier OWN perception problems
(especially those who talk out of thier mouth one way about certain third
parties then do exactly the same thing.)

The item you quoted was also several days old...The REST of us had moved
past it.

You're a day late and a dollar short...Again.

Can't you select your insults in a bit more timely manner, Old Fella?

True of the code, but the writtens are substationally the same before
and after restructuring. Oh, element 4 has a few less questions than
old elements 4a plus 4b had, but it's the same
material you have to study.
And of course you won't know exactly what questions you'll get.

Maybe a few advertisements placed in magazines (horrors) CBers
and (even worse!) freebanders read can find some new "born
again" "repentant" people to get a ham license and swear off
freebanding...? Now that the sunspots are out of season?

Not all call areas got to use up the KN/WN calls before the
distinction between Novice and Tech calls was abandoned.

> about it.

We'll never really know.

But either way, I think we can agree on this: Usually, a VP running
for the presidency doesn't even have to consider whether or not to use
the outgoing president for campaigning. The fact that Gore had to
weigh whether or not the Clinton connection would help or hurt says an
awful lot.

And there was a double whammy. Consider what the country was like back
in 2000 - low inflation, low unemployment, cheap oil, balanced budget,
few terrorism fears, etc. Peace dividend. Stock market was doing
pretty good too. Heck, the fact that we could focus on things like
stained dresses says a lot about the mindset of the time.

Of course a lot of that mindset was obviously unjustified, and it
wasn't universal by any means. Yet Gore couldn't get elected even with
that track record.

> > And most of all, they'd have to re-think every bit of electioneering wisdom if

>
A lot would depend on whether there was a chance of getting a popular
vote amendment passed, and who proposed it. I really think both
parties would rather keep the current system even though it means an
occasional mess like 2000, rather than face a brave new world of "one
person one vote".

IIRC, only twice in US history has the popular vote winner not won the
election. First time was in the 19th century (Hayes?).

Karl who?

When and how did you get *your* Extra, Bruce? Was it in front of an
FCC examiner? 20 wpm code, send and receive? Did you take the old
written tests, too?

Or did you bypass all that and get it after April 15, 2000 - just like
the folks you call "lazy"?

Yes, I did see that. Rosin flux in orbit around the solder !

Did you also notice that they were using a Weller TCP series iron (50 year
old Magnistat design).
Quite a few good reasons for choosing this specific model for space
station - KIS - easy to repair - virtually foolproof -
needs only 24 volt (or 12 volt) bus to operate .. with no need for base unit
with electronics.

Trouble is, we don't usually get "rock-solid, concrete intelligence". So
somebody has to judge what info is good and what isn't. Sometimes the
judgement is good, sometimes it isn't.
>

In public, anyway. I bet *all* of Iraq's neighbors were happy it was done, but
could not say so, for obvious reasons. Nor would they do it themselves.

>Good thing for our troops

Chemical weapons are reportedly much easier to make than nukes, yet none were
used by Iraq. Thankfully.

Well, well, well! I think Jimmy Who found his backbone.

Maybe he'll stand up to Steve's abuses next, if he doesn't fear legal
action or "Dialing..."

All I can say is, "Bravo!"

To set the record straight, K4YZ/K4CAP is not in the following logs:

KA0ZFY
N0iMD
HL9ACT
N0iMD/KH2

T5/N0iMD
N0iMD/9
N0iMD/8

K4YZ merely talks a game, and not a very good one at that. TTFN.

Jim's had his "backbone" for quite a while.

As for Jim...He's quite independent. He and I disagree on a great many
things and always manage to not have to resort to the type of conduct that you
and Lennie the Liar seem to find necessary.

That would be, in particular, lying to each otehr or calling each otehr
names.

As for "abuses"...What abuses, Brain?

You lie, I call you a liar.

You dance to Lennie's stringpulling, I call you Puppetboy.

You act like you know it all when it's evident you know nothing, I sarcastically call you "Brain". You cringe at that diminuitive, yet you seem to relish doing it to others in spades.

Sucks to be you, Brain...You're just slightly more transparent than wax paper, and about as useful.

Steve, K4YZ

To set yet another Brainless Rant aside, N0IMD is welcome to review the ARRL's "DXCC" listings where he WILL find "K4YZ". No talking necessary...documented on paper from around the world.

And yes, that has been since I assumed the "ownership" of K4YZ in December of 1996.

FYI: None of the above callsigns Brain listed are in the logs of WN8OAH, WD4DEV, KA8GRY, KC8M (before 12/96), or K4CAP, either. Nor is he in the logbooks of KA6CM (7/81 to 12/81).

So, Brain...who's "talking" now? Care to check out the ARRL site?

Putz.

Steve, K4YZ

2349. Re: License Fees --- a poll

Newsgroup: rec.radio.amateur.policy
Date: 2004-08-18 11:17:10 UTC

In article <20040812081936.11031.00003150@mb-m02.aol.com>, k4yz@aol.com (Steve Robeson K4CAP) writes:

>>>>>If you had to drop it at once, maybe not. But WHO said "all at once"?

>>>>It's the most logical way to do it. Vanity call fees are for ten years,
>>>>all in a lump.

>>> It is? Most logical to whom?

>>FCC

>You're still trying to avoid the concept that that was based upon
>servicing a particular service that is financially non-contributory, Jim.

? I don't see how. Looks to me like FCC just matched the fee to the license term.

Note that under present rules, there's only one way to get a renewal before the "90 days or less till expiration" window: Get a vanity call. When you get a vanity call, FCC gives an automatic renewal so they don't have to prorate the fee. That's how they'd do any sort of license fee, IMHO.

>>>Most other "professional" fees are for three or five years.

>>Are they federal?

> Some are...some aren't.

OK. But they're professional - a business expense.

>>> It's only "most logical" since it's the way things are now.

>>> Electronic fund transfers and ULS make it possible to do this yearly
>>>without any other human interaction, if yearly was the period decided upon.

>>Sure - if someone is willing to do the work to set up such a system.
>
> And that would require what...A couple of days worth of some "consultant"
>loading the programs and debugging the program, Jim...?!?!? Come on ! ! !

It's the federal government and it involves handling money. You know it wouldn't be as simple as if you and I were doing it.

>>>Ten year licenses came about since it was financially burdensome to do
>>>the
>>>administrative functions on a radio service that it does not pay fees.
>>
>>No radio service pays fees direct to FCC. They go into the general fund.

>>That's not going to change.
>
> Who says?

Congress. You think they want an agency controlling its own purse strings?
>
> The Finger of God has etched this in stone somewhere and I missed it?
>
Worse - politicians! ;-)

There's also a "checks and balances" issue. If an agency can directly benefit from fees and fines, there's a perceived conflict of interest.

In a free market situation, a provider cannot simply raise prices at will ("more money for ME!") because people will go elsewhere. But there's no alternative to a government licensing agency like FCC, so the rules are set up so that the agency cannot directly benefit.

>>>>>You get all those Amateurs chipping in

>
> Sure they would.
>
>WHO SAID that this was set in stone, Jim? Where is that burning
>bush...???

It's the most probable, given the way things have been at FCC for over 20 years. Heck, they're liable to look at the price of new ham gear and say "gee, at those prices, $250 for a license isn't much..."

>>>>>But there are very few people who CAN'T drop $25 right now for some
>>>>>recreational purpose.

Note how many hams smoke, too.

> Sure he was.
>
>He was an addict. He chose his addiction over something else. Are we
>supposed to disregard implementing ideas which might exclude those who >CHOSE
to spend thier monies on THIER addicitions...?!?!

It makes sense to market something in a way that will attract the intended
market. It's a natural human tendency to want to make a distinction between
spending a little money frequently and spending a lot of money in a lump, even
though they total to the same amount.

>>btw, he's been a radio maintenance person (I don't know the exact MOS) in a
>>branch of the US military. Took care of RTTY setups and was good at it.
>
> Good for him.

Yep. He had all sorts of stories about how many messages they handled, how many
high powered transmitters were used, military life, etc., etc. He never got
close to any actual combat but he did a necessary job.

He did have one very good effect on me: Convinced me never ever to get near any
tobacco product.

> Let's hope his lungs hold up.

Yep. You know better than I how much damage smoking can do.

But the point remains: "Selling" isn't always based on logical behavior.

>>> That's stupid. People will make the decisons they make based upon
>>thier
>>>own needs, interests, etc. If Amateur Radio "needed" to incorporate
>>>fee-for-service licensure, then there would be SOME Amateurs who would need
>>>to evaluate what was the greater priority.
>>
>>Yep. And in more than a few cases, we'd lose.
>
> No, we won't.

We would. Or at least we might.

>>>So far you've not offered anything that would really be a valid
>>>impediment to fee-for-service.
>>
>>My fee for that service is....
>>

>"unisolution" like you're proposing it would have been implemented
>decades ago.

Agreed but there's even more to it.

160 used to have subbands-by-mode. Then hams all but lost the band to LORAN. We got it back in little bits and pieces over a couple of decades. The lack of subbands-by-mode today is a result of that, not any special characteristic of 160.

btw, anybody who says "CW is dead" should take a look at the ARRL 160 m contest scores.

>old elements 4a plus 4b had, but it's the same
>material you have to study.
>And of course you won't know exactly what questions you'll get.

IIRC, under the old system it took 5 written tests totalling 190 questions to
reach full privileges. Heck, it took 2 writtens totalling 65 questions to get a
Tech! That has been reduced to 3 written tests totalling 120 questions, A Tech
requires only a single 35 question test.

That's a significant reduction, IMHO. But it hasn't resulted in sustained
growth. Neither has the loss of nearly all code testing. Nor the no-code-test
Technician, nor code test waivers, etc. etc.
>
>Maybe a few advertisements placed in magazines (horrors) CBers

>freebanding...? Now that the sunspots are out of season?

I don't think so. In my experience, a lot of those folks simply don't want to
be licensed. Has nothing to do with the tests, and everything to do with
perception.

Publicity to the general public is one thing that's needed.

Source record: 95978

Mid-'80's ICOM R71A for sale. Recently removed from sailboat as I am looking for RX/TX capability and this SSB is RX only. It works. It shows no outward signs of any abuse. It comes with owner's manual and some schematics. No AC power cord.

Since anyone interested in such a machine knows its value, I'll ask that you simply make me an offer that will satisfy both of us.

Thanks, but I merely belong to the ARRL.
I don't allow it guide all of my amateur

activities. It is a fun club with some good operating activities, though.

Best of Luck, bb

Ah yes...A "club" it may be...

But there, documented in-and-amongst thousands of other licensed Amateurs who HAVE not only talked the talk, but walked the walk is K4YZ...

Documented...Proven...

Where oh where is N0IMD or ANY of his other manifestations...?!?!

Three different DX locales and not a THING to show for it?

Your exact words were: "K4YZ merely talks a game, and not a very good one at that.", yet proof to the contrary is available at a key click.

There's a "game" being talked here, Brian, and it's by you.

My proof's in writing.

And I don't let the ARRL "guide all of my Amateur activities", however it WAS nice of them to provide the means for me to once again prove what a loser you are, not that it takes much effort...You >>DO<< make it soooooooo easy.

> Best of Luck

The "luck" needed is yours, "bb"...

Ran your mouth off AGAIN and wound up getting slapped around by it.

Your name is mud, and YOU are the one adding the water and dirt to make it.

Idiot. When will you realize that your own worst enemy is your ego, followed closely by your mouth? Both of those closely controlled by a complete lack of self control and common sense...???

Steve, K4YZ

He'll have to do triage on that dialing finger. He's picked so many
fights all over this newsgroup he'll probably even get a blister on
his fingernail (not to mention another cigar box medal).

And why does he have to have a "Dialing Emergency" when he should be
getting on this Anon Quitefine character? When has he ever passed up
an opportunity to try to bust the chops of >>>ANY<<< anon poster?

Wi-fi is already much bigger than the laserdisc was and it's growing
exponentially. The laserdisc died on the stores shelves from the
gitgo.

> Probably not - that is, if we're talking about customers directly
> accessing the
> satellite.

It's the cost of consumer direct access to the satellites which is the
show-stopper and I don't see it coming down to dialup costs for years
if ever. 80% of the U.S. consumers with access are still using dialup
connections and most of 'em are not going to move to broadband until
the costs get a lot closer to dialup than they are.

A whole bunch. Even the old birds which have been up for years can
repeat something like 900 TV channels and those are not considered
high-capacity satellites.

> Compare that to what is

What "ducts"?? There aren't any ducts running into farms and vacation
lodges out in the boonies. They'll have the last mile problem for
years to come. Until the phone companies replace their twisted-pair
wiring with cable, fiber optic and otherwise.

Maybe you're right. Some years ago I exchanged a few emails with a
freebander hobbyist trying to convince him that a ham license would
be a good thing for him to get. Not by shameing him for freebanding,
but telling of the many things you can do legally on many different
kinds of bands as a ham. But he mentioned an experience of not
liking the hams at some random ham club he once visited. That's
the preception issue you mentioned.

It was a long shot....

Absolutely. This is where DSL can really get the market, because with DSL you don't need a second phone line.

That means 900 customers can have 6 MHz of bandwidth each. Or maybe 5400 can have 1 MHz each.

When the satellite repeats a channel, it doesn't matter how many people watch it. Internet bandwidth is a completely different beast.

I meant ducts that carry it to within a mile of the customer. Ducts that go across the country, etc. Satellites can't create another RF spectrum.

Fiber and Wi-Fi...watch out...

One caveat!

A lot of folks are setting up their own little wireless networks. The stuff is becoming cheaper than the cable it replaces!

But not enough folks understand the need to encrypt. Without good encryption of your network, anybody can drive by with a lapper and access your network - and your hard drives, etc. Your internet firewall won't help because your network thinks the invader is *inside* your network, not outside. You need for the network itself to be encrypted.

Where's my RJ-45 plugs?

N2EY> One caveat!

N2EY> A lot of folks are setting up their own little wireless
N2EY> networks. The stuff is becoming cheaper than the cable it
N2EY> replaces!

And for good reason. In my new location, I'm terrified to drill
through the walls (it's an old *solid* house that predates cheap
sheetrock by decades) but I've no trouble using wireless.

N2EY> But not enough folks understand the need to encrypt. Without
N2EY> good encryption of your network, anybody can drive by with a
N2EY> lapper and access your network - and your hard drives, etc. Your
N2EY> internet firewall won't help because your network thinks the
N2EY> invader is *inside* your network, not outside. You need for the
N2EY> network itself to be encrypted.

If someone truly sets up their network in this manner, they are truly
running a serious risk, as you describe. I've just moved, so I have
to reinstall my network, and it will actually be set up with two
wireless access points: one for the "inside", which will be
MAC-restricted and locked down with WEP (until my operating system
fully supports TKIP in which case I'll go up to that protocol), and
one which is "outside" for any and all comers to sit in the nearby
park and reach the internet. No traffic goes to the inside from the
outside, and both sides can see the internet, so life is good.

N2EY> Where's my RJ-45 plugs?

Put some time and effort into understanding exactly how to make it all
work properly, and you'll find that you need fewer RJ-45 plugs.

N2EY> 73 de Jim, N2EY

Oh, and I get that you're not talking about setting up your own
network in the encryption-free manner in which you describe. I'm just
trying to show that there are many good ways to make wireless work
such that you can be friendly to your neighbors while protecting your
assets.

Maybe. But which *appears* to be more difficult to most newcomers:

"If you want to be a ham, you have to pass two tests, with a total of 100
questions"

or

"If you want to be a ham, you have to pass a 10 question test"

?

>> But it hasn't resulted in sustained
>> growth. Neither has the loss of nearly all code testing. Nor the
>> no-code-test
>> Technician, nor code test waivers, etc. etc.
>
>True, but I don't know why.

Nobody really does.

But all this indicates that the old nocodetest mantra that "code tests are
keeping out hordes of 'otherwise qualified' people" is simply false. And now
folks like NCVEC (which is to say, W5YI and a few buddies) are pushing for even
simpler entry licensing. Which is simply wrong.

I think lack of publicity is one big factor. Another is competition from other
technical avocations. Add to this the fact that some of the reasons to be a ham
years ago have vanished. Example: I know some hams who got licenses simply to
keep in touch with family members. Decades ago, when longdistance telephone
calls were expensive, it was family members across the continent. Years ago,
when cell phones were expensive, it was for local honeydew comms. Today those

reasons have all but vanished.

>>>Maybe a few advertisements placed in magazines (horrors) CBers
>>>and (even worse!) freebanders read can find some new "born

>
>It was a long shot....

That's one perception. Here's another:

Hams are licensed by the feds and the vast majority of them follow the rules - all the rules. Which means that even though they could run superpower, they don't, and even though their rigs go outside the ham bands, they won't use 'em there. Etc. Part of the reason is that the FCC knows where hams live, etc., but a bigger part is that "it's just not done" by hams.

IOW, most of hamdom is pretty straight-arrow law-abiding.

Freeband is exactly the opposite. Almost everyhting hams consider important, they ignore, and vice versa. So why would one be attracted to the other?

Odd, when I was first licensed I could only use CW on 80, 40, 15, and 10M.

Wonder what kind of subbands those were?

I use a very simple all-platforms bulletproof "security protocol"
Jack. I don't put anything of a sensitive nature on a hard drive in a
computer which is networked, particulary when the network includes the
Internet, *nothing*. Net result is that my sensitive info can't
possibly get hacked and I don't have to diddle with any contorted
encryption and firewall sorts of pushups. I could care less if this
computer gets hacked, there's nothing in it which is of any pecuniary
or "intelligence" value at all to anybody else. What do I care if
somebody taps into my antenna modeling files, e-mail to N2EY or my
.jpegs of family and such which are in this box?!

Of course in the process I'm giving up a lot of current-tech
conveniences like online banking, online shopping and others. But
that's OK where I come from, my telephone still works and I still dial
around to place orders with the plastic, the banks are still issuing
statements, the post office still sells stamps, yadda, yadda. I have
yet to run into a transaction or an instance of passing out any other
type of sensitive info which was stymied by doing it offline.

Depends on the tradeoffs you make between security and convenience,
I've taken the easy way out of the whole endless computer security
swamp.

>amateur operations with the ARRL.

The "proof" is not "with the ARRL", other than getting the cirteria for
the certificate verified.

The certificate is proof to my peers that I accomplished something.

And that "something" I DID is the something YOU continue to lie about,
Brain.

Brian P. Burke is a liar.

Now...prove me wrong, Burke. I say you can't do it.

>To each his own.

Yep. I "did it" and there's proof.

You SAY you did it, and argue about it when you are asked to prove it.

>I don't have the same needs...(SNIP)

Yeah...after Clinton's presidency honesty and character are hardly
worthwhile traits any more.

...and you're still not in my logs.

And I'd still like for you to provide some link to where you think I
suggested that I was.

Another day, another opportunity to regain your self respect and
dignity...

...down the drain...

Narrow band modes, Brainless Twerp, in as much as Conditionals, Generals,
Advanced and Extras could STILL exercise the full breadth of thier privileges
there.

The NOVICES may ahve been limited to using only CW, however NONE of those
"subbands" was restricted to CW only.

Never.

General class and higher licensees can also use the FSK data modes here.
Thus they are not "CW only."

That's with antique satellites, not with the monster birds being
tossed up these days each of which which has orders of magnitude more
capacity than the TV repeaters.

> When the satellite repeats a channel, it doesn't matter how many
people watch
> it. Internet bandwidth is a completely different beast.

Welp, I read recently that several new satellite ISPs have jumped into
that biz so common sense indicates that they have to have unused
bandwidth available in copious supply or they wouldn't have opened
shop. Fact is that the demand for sattelite access is very
cost-limited which automatically keeps the need for bandwidth down to
manageable levels. Sattelite comms will continue to grow in markets
where the users are 'way out in the boonies where cables will never go
and they don't have any options and there are plenty of those. Then
comes the huge and growing market for sattelite mobile comms. And the
consumer market populated by folk who just like working the birds.

It appears to me that in the limit and ignoring some obvious realities
the Wi-fi vs. Satellite market competition won't be a competition. By
their very natures Wi-fi or some evloutionary form of Wi-fi will grab
the big pieces of the light-duty consumer and business travel markets
and the sattelites will continue to carry the heavy duty business
mobile and remote access comms.

And all this with the monster volume of *really* broadband military
sattelite comms sharing the RF spectrum with the commercials.

> I meant ducts that carry it to within a mile of the customer.

Many people in this country live twenty and more miles from anything
even vaguely resembling a cable. Wi-fi is never gonna reach them.

> Ducts that go
> across the country, etc. Satellites can't create another RF spectrum.

What's a "duct" anyway? How many of those are running all over North
Dakota and Idaho??

For the quality of TV programming provided today (with the possible
exclusion of Discovery, History Channel and TLC) they could just use one of the
old ECHO balloon satellites for all they are worth.

They're more like isolated cases rather than widespread abuse. Not
everybody's goal in life is to "cheat the system".

Nowhere in that article does it say the ARRL wants to eliminate AM
from the 75 and 40 meter bands. Try reading with your eyes open,
instead of stewing in your seat with your eyes wide shut for a change.

Then that makes you a Democrat. The Democrats hijacked the term
"independent" and rolled it into their fray because they don't have
enough guts to call themselves Liberals.

General class and higher are allowed to use FSK in the novice segments so
there are no "CW-only" subbands on HF.

Thanks, Steve, but this isn't the first time I've commented on 'ULX's
nonsense about "real hams" and such.

For example check out:

28 Sep 2003:

http://groups.google.com/groups?selm=20030928081040.29660.00000865%40mb-m24.aol.com&output
=gplain

03 Oct 2003:

http://groups.google.com/groups?selm=20031002232621.12300.00000901%40mb-m20.aol.com&output
=gplain

just to name a few.

> He and I disagree on a great many
> things and always manage to not have to resort to the type of conduct that you
> and Lennie the Liar seem to find necessary.

Gentlemen can disagree without being disagreeable.
>
> That would be, in particular, lying to each otehr or calling each otehr

> to relish doing it to others in spades.
>
> Sucks to be you, Brain...You're just slightly more transparent than wax
> paper, and about as useful.

If all that's true, why bother with it, Steve? AOL has wonderful
newsgroup filters. I only saw this because you responded.

Let's clarify a few things. We all know Mr. Burke isn't going to tell
us anything significant about his /T5 operation. It's just the
mechanism for
a shaggy dog story, to involve others without ever getting to the
point or answering a direct question. Check out:

23 Oct 1998

http://groups.google.com/groups?selm=70r191%24b1d%241%40nnrp1.dejanews.com&output=gplain

for more info than you've been able to gather in the past few years.

None of this should be a surprise, of course. Some folks don't let
facts get in the way of a good rant:

http://groups.google.com/groups?selm=19970102.232219.3454.4.burkebp%40juno.com&output=gplain

You and I are long-time amateurs, who enjoy and use Morse Code, so of course we're targets of everything certain folks can think up. Worse, we're Extras with 1x2 calls, which makes it that much worse. We and our code test are blamed for everything bad that happens in amateur radio - and credited with nothing that's good.

This was all explained even before I was on rrap:

http://groups.google.com/groups?selm=19970102.004701.3294.5.burkebp%40juno.com&output=gplain

Note the date.

Why bother with folks who are so negative, when there's so many good, fun things to do in ham radio?

Jack> Oh, and I get that you're not talking about setting up your own
Jack> network in the encryption-free manner in which you describe.
Jack> I'm just trying to show that there are many good ways to make
Jack> wireless work such that you can be friendly to your neighbors
Jack> while protecting your assets.

Brian> I use a very simple all-platforms bulletproof "security
Brian> protocol" Jack. I don't put anything of a sensitive nature on a
Brian> hard drive in a computer which is networked, particulary when
Brian> the network includes the Internet, *nothing*. Net result is
Brian> that my sensitive info can't possibly get hacked and I don't
Brian> have to diddle with any contorted encryption and firewall sorts
Brian> of pushups. I could care less if this computer gets hacked,
Brian> there's nothing in it which is of any pecuniary or
Brian> "intelligence" value at all to anybody else. What do I care if
Brian> somebody taps into my antenna modeling files, e-mail to N2EY or
Brian> my .jpegs of family and such which are in this box?!

It is interesting that your primary concern is to keep your
information secure -- that is indeed a very valid concern. The
approach you describe is the one that was followed at the defense
contractor where I started my career. It works very well for many
many cases and is "the right way" to handle most kinds of classified
information. However, there is a concern which isn't addressed by
your system, which is being a good Internet citizen and preventing
your computer from being used for Evil. You could care less if the
machine gets hacked, but if it gets hacked and used as an open proxy
for delivering spam or as part of a distributed denial of service
attack, your negligence leads directly to the economic losses of
others. That's something worth considering.

Brian> Of course in the process I'm giving up a lot of current-tech
Brian> conveniences like online banking, online shopping and
Brian> others. But that's OK where I come from, my telephone still
Brian> works and I still dial around to place orders with the plastic,
Brian> the banks are still issuing statements, the post office still
Brian> sells stamps, yadda, yadda. I have yet to run into a
Brian> transaction or an instance of passing out any other type of
Brian> sensitive info which was stymied by doing it offline.

In some ways it's harder to do business offline these days, but just
as you can still use a pulse telephone without Touch-Tone, you can
still use the phone instead of the Internet.

Brian> Depends on the tradeoffs you make between security and
Brian> convenience, I've taken the easy way out of the whole endless
Brian> computer security swamp.

That is indeed one approach, and other than the blind spot I described
above, it's a perfectly reasonable and consistent approach. You can
still send all your Internet traffic over AX.25[1] and I can't, which
is also a plus for you. But I've got a versatile tool, a profitable
source of income, an engaging hobby, and a space heater all in one,
and that doesn't completely suck.

Jack> Jack.

Brian> w3rv

Jack> (one of those paranoid computer security types)

Brian> (ya done it to yerself Jack)

Of course, and I'm totally okay with it -- just issuing a disclaimer
to let folks know that my perspective, while reasonable and consistent
- From where I sit, may be completely insane from another's point of
view.

Jack.

True enough. But do you think Riley has been 100% effective at
catching the cheaters?

You said "documented" and "proven." What was I to think?

When you get your head together on this one, please get back to me.
I'm just not into your incessant babbling today.

But in the end, you're still not in any of my logs and you won't be
getting confirmation for Nebraska, Republic of Korea, Guam, Illinois,
Somalia, nor Ohio from this ham. You might as well quit trying. Go
cry about it somewhere else.

> a bigger part is that "it's just not done" by hams.

Most licensed car drivers follow the rules of the road even if there
are no cops around. Most understand that the system works only
because the rules are followed, and thus most do follow the rules.
And the same for most hams on the ham bands. There's little point
calling CQ out of band as you won't find other hams out of band.
And there is plenty of interesting things to do in band. As for
super power, our legal limit is on the order of a kilowatt (varies
a bit depending on mode and subband) which is plenty enough if
you really gotta snag that rare DX. Throw in a beam if you
want (though beams for 160m are kinda hard to come by...).
Other rules like "no business traffic" are there to protect
our bands from being taken over by business users. No broadcasting
is also there to keep the bands useable for normal 2 way comms
(think about how often you actually push the PTT button or
activate the VOX, maybe 15 minutes a day at most unless you're
calling CQ in a contest). That's a duty cycle of 1% or less
for most of us on days we turn the rig on. And if you only do
that once every 2 weeks it drops to 0.07% duty cycle. Broadcasters
are on about 100% of the time, and the bands would fill up pretty
quickly with trash. Thus that rule.

We don't have that many stupid rules nowadays. Used to be you
had to mail a letter to the FCC telling if you were going to be
mobile for more than 2 weeks. But Phil (IIRC) mentioned that
the FCC never acted on any of that stuff, so why bother making
hams do it? So it was dropped.

>
> IOW, most of hamdom is pretty straight-arrow law-abiding.

I've committed a few infractions by accident (phone
in the CW band for example) but soon caught it and corrected
it myself. No need for the FCC to kick down the door....
The FCC knows that people occasionally make mistakes and
only acts if you keep on doing it for long periods of time.
Then it's on purpose and you know it.

>
> Freeband is exactly the opposite. Almost everyhting hams consider important,
> they ignore, and vice versa. So why would one be attracted to the other?

There's an outside chance that some of them don't know that ham radio
exists. Nahhhh.... not likely at all....

2399. Re: Vanity Call fee going up in August

The effect the fee has in Australia is that only active Hams maintain
their license, so you have a clear picture of how many active hams
there are as opposed to just those who had an interest years ago and
haven't touched a radio since. There was a discussion about changing
the license to get rid of the fee but that went absolutely nowhere.

No. It isn't. You and Kelly are wrong. There was a whole class of
amateur that was allowed nothing but CW on HF, and other hams had to
abide by mode and power limits of those subbands.

> - but there should be!

Ask the FCC to make you a Novice and you can have all the CW you can
stomach in what Hans calls the "novice ghetto." Maybe some benevolent
Extra will come along and give you a pity QSO. Hi, hi!

>
> just to name a few.

Just to name a few? I think you've exhausted Google.

You sat by for >>>Years<<< while Bruce abused this newsgroup with his
abusive, illiterate postings. Only after you suggested that he was
brilliant, and I kept calling you on it, did you say the first honest
thing about Bruce.

> > He and I disagree on a great many
> > things and always manage to not have to resort to the type of conduct that you
> > and Lennie the Liar seem to find necessary.
>
> Gentlemen can disagree without being disagreeable.

I find Steve highly disagreeable. He's actually abusive.

Yes, Steve, why bother? You won't get a QSL card out of it.

> Note the date.

Note the date that Bruce began his abusive postings.

Note the date that you first noted his abusive manner.

Note the date that Steve began his abusive postings.

Note that you have >>>yet<<< to make a note of his abusiveness.

Yet you have no problem with claiming that Len or I are "negative."

Hi, hi! Good old PCTA double standard.

> Why bother with folks who are so negative, when there's so many good,
> fun things to do in ham radio?

Jim, this isn't ham radio.

I'd be perfectly pleased if Steve were to spend all of his spare time
actually playing radio commando instead of abusing people on here.

And for what it's worth, have you noticed that we used to have an ANON
poster on here going by the "handle" of Quitefine? Steve has an

unnatural attraction for every ANON poster on here >>>EXCEPT<<< for
Quitefine. Can you explain this?

> You are confusing good manners with weakness.

No. YOU are confusing the PCTA extra double standard with
socially-acceptible, logical behavior.

>You are also confusing good manners with backbone.

No again. Given the enormous outpouring of vituperation from that
modern ham role model (aka "nursie"), there can be no other
recourse than telling the truth. HOW that recourse is done is
apparently a sore point with you.

YOU condone nursie and whatever he says...because he is another
PCTA extra (and that "club" must stick together...why, I don't know).

Jimmie Who writes so bloody much in here that he can't come to
a good point. YOU are confusing enormous content with "good
manners." <shrug>

Now WHY are you wading in here in yet-another-nursie-does-the
Yell-Yell versus Everyone Else?

Back to your penalty box...

> Total growth of 901 in that much time isn't healthy. Reducing the code test to
> just 5 wpm did not result in sustained growth, and neither did reducing the
> written tests.

I just gotta say it.....well DUH!

Things are not made popular by making them easy. Things are not made
popular by giving them away. A reasonably intelligent person can learn
the tests, the old "hard tests" tests or new "easy tests".

It doesn't matter. If a person has to spend a few more weeks learning
something, so be it.

It won't chase them away.

It doesn't matter if there is a Morse code test or not. Not one little bit.

Too many people seem to have thought that elimination of the Morse code
test would bring an influx of new eager hams. It will not.

If you think that elimination of the Morse test will help, You are wrong. If you think that retention of the Morse test will help, you are wrong.

Karl, for all his bluster, has no more clue about what will attract new people to the field than most PCTA's. He and the other CW haters simply hate CW, and rationalize their hatred into "Ham radio will die unless we get rid of the test.

Anything that needs rationalized is probably wrong to begin with. And they are wrong to begin with.

You probably agree so far. You won't soon.

The difficulty or lack of "difficult tests" or the Morse code test likewise has *no* effect whatsoever on the quality of the Ham community.

Ahh, what *does* grow Ham radio?

Hams grow Ham radio.

And an awful lot aren't doing it.

Bitching, whining, and moaning about the good old days and how much better hams were then is only going to chase new people away. If I were the sensitive sort, I would have quit Ham radio ten times over. I've had to listen to Olde Tymers complaining about how only jerks and CB'ers are joining the ranks, and how anyone can become an Extra nowadays. I've listened to them claiming that all new Hams are stupid, and other insults thrown at the new guys. At one time, I would gently remind them that "I resemble that remark", but that gets old after the umpteenth time.

Answer me this, is that an inviting atmosphere? How many people enter hobbies to be ridiculed?

Hams *must* provide a welcoming atmosphere, not inject their own personal preferences into the mix, and take these new people and show them they are valued on the air. Then word of mouth will spread among the technologically inclined, and we won't have to be discussing how to grow Ham radio.

The Morse code test could disappear tomorrow, and as long as Hams encouraged a welcoming atmosphere that encouraged quality, we would get quality. The test could be retained, and as long as newcomers could have a reasonable expectation that they would have a good experience, then the hobby would grow.

We must heal ourselves!

Sorry but you are wrong. Although Novices were restricted to CW only in
limited subbands, Generals and higher could operate FSK in those same
portions of the spectrum. Check your FCC rule book.

Hey Steve.

Here is a good question.

Jim has suggested that you not engage with Lenover21 or Brian. I have
in the past also. There have been other things we have disagreed with.

And yet, between whatever Jim and you or myself have disagreed with, we
have always managed to keep it civil, am I not correct?

Hmmmmm, what would be the difference?

I presume you mean Mr. Carl Stevenson, WK3C.

How so?

>hes the Clown who sees Black
>Helicopters Flying over house.

When did he say that?

I see large dark-colored helicopters flying over my house on occasion. Also A-10 "Warthogs". They're from Willow Grove NAS. No problem.

>Hes the one who sees Pictures of GUNS on
>Computer and thinks he going to be shot.

When did he say that?

> Hes the Morron who Claims CW was the only reason he couldnt upgrade, AND
>THEN
>WHEN THE cw TEST WENT AWAY it took him a year to Upgrade.

That much is true. However, you also waited until the code test went away. So you took the same test he did.

>Hes the one who Claims
>he will never support reducing written test, now hes all for it.

For which sdtance he has been challenged repeatedly - by me and others.

>Hes the Idiot
>who was going to bring all this great new Digital Stuff to Ham radio, and so
>far we have seen nothing.

He was challenged about that too.

On the other hand, WK3C has done a *lot* to fight the BPL threat. Not just comment-writing but actual on-site observations and reports of same to FCC. His connections in the industry didn't hurt our cause, either.

And ol' Carl knows how to spell, punctuate and capitalize correctly. Worthwhile skills ;-)

>Som again, tell me why MR KOOK KARL is your hero.

I don't know anybody by that name who is my "hero". WK3C sure isn;t my "hero". But he has done a lot to fight the BPL threat, and I have thanked him and supported him publicly and privately in that effort.

What have you done to fight BPL, Bruce?

Huh. The "Novice ghetto" is where I go to listen to slow code for
practicing purposes. It's also where I've had my single successful CW
QSO -- with a long-time ham who was willing to be patient with me.

Sounds like a nicer place than lots of other chunks of the ham bands,
and a hell of a lot nicer than here, if you ask me.

Jack.

Quite a few are, Steve. A lot are also that integration between the
browser, mailreader and system that was supposed to open up a new world
of computing ease for us.

> And I am with you, Brian...If I need to do something that bad, I will make
> the call with the plastic. Otherwise I'll keep Ben Franklin's ugly cousins
> working another day!

My suggestions for computer security are:

1. Buy a Mac

If you can't buy a Mac:

1. Zonealarm Pro (avoid version 5 - if you have to register it with
version 5 do it, then find the previous version)

2. Proxomitron (or some other proxy hardware or software)

3. Don't use Internet Explorer at all - ever.

4. Never ever ever use Outlook or Outlook Express.

5. Nortons of course.

6. Adaware don't hurt.

I have to do all that stuff for my home computer (a PC) but all I have
to do for my work computer - the Mac - is turn it on, download the
updates from Apple around once a month. Hundreds of hours saved per year.

Just like Steve to argue minutia; he'll probably end up calling
someone a liar over it. The difference between 1/35 and 1/39 is
0.00293.

Yet I still support the ARRL regardless of the current price.

Thems the >>>FACTS<<<.

So now that you've tried to divert the issue, are you still going to
give Jimmy Who da pass?

S'OK. Quitefine, actually.

Nonsense. You sound like the Neo-cons that state that all that do not
agree with everything they stand for are liberals. You must label and
you must castigate. I am no Democrat. In fact, I have around a 60 40
ratio of voting Republican. Problem is people like you are trying to
tell us exactly what we are allowed to think under the guise of Neo-conism.

And the fascinating thing is that to me, that makes Neo-cons the
ultimate liberals!!!!!

Liberal!

They STILL were NOT "CW-only" subbands.

Conditionals, Generals, Advanced and Extras were allowed to exercise the
full breadth of thier privileges there.

They were NOT "CW-only".

Lennie obviously has a hard time with the idea of the truth, if we can
take this at face value, Mike.

Well, Mike...It's probably because we disagree with each other without calling each other Nazi's, jackbooted thugs, elitists, invent diminuitives for each other, and generally treat each other with a modicum of respct when we take each other on some point.

But that's just a guess on my part!

=)

Why? You'll only try to redirect the reply behind a typo or some
irrelevent point.

The facts are there are NO "CW-Only" subbands on HF.

In this respect I do what everybody else with any common sense does. I
have Norton Anti-Virus up, running and current and I trash e-mail
attachemnts from folk I don't know as they come thru the gate. If
after that I'm still considered negligent then so be it.

2435. Newbie Questions About BPL Threats To Ham

Newsgroup: rec.radio.amateur.policy
Date: 2004-08-20 04:05:31 UTC
From: Eric <none@nospam.not>
Message-ID: <10iau4eedmkip39@corp.supernews.com>
Source record: 96111

Hi,

I should begin by stating that I'm not an amateur radio operator, however I have been putting some serious consideration into taking up the hobby. There are two groups in my area, one at the University that I attend - the other a city group, and I have collected various information from their respected web sites. I plan on attending some upcoming events to see what its all about, get a feel for the community, and then hopefully become involved.

I do have some background in RF, however. I was in the military and worked with microwave (SHF) satellite and troposcatter terminals. I'm familiar with basic component electronics, multiplexing techniques, modulation/demodulation techniques, up/down conversion, signal amplication, antenna gain (at least for parabolics), bulk encryption techniques, test equipment (made much use out of signal generators, spectrum analyzers, o-scopes, multimeters, attenuators, etc). Basically, I have familiarity with everything that was required to bring up the systems I used and keep them running. I'm more familiar with the properties of SHF than HF though. We had HF equipment as well, but they were worked by people who had training for HF equipment specifically. Some of the properties of HF came across to me as being almost "black magic", since I didn't have familiarity with it. The HF guys regarded HF as much of an art as a science. :^)

In the 1980's, while I was young, I had some introduction to amateur radio. My neighbor was a big ham and, since I was a little Tandy/Commodore computer geek at the time, he showed his radio equipment. At the time, I guess, packet radio was the new emerging thing? I was really impressed and thought packet radio was really neat. I knew then that I wanted to eventually get involved. (He was majorly involved with ham. He was one of the main FidoNet hubs for local BBS's in the area and brought the feeds in through his equipment.)

I was just doing some reading and came across an article about BPL, which of course I found to very alarming. Naturally, I take the amateur radio side on the BPL issue. From what I have read so far, the power companies have been able to use strong arm tactics to try to get BPL to go forward with inadequate testing. The very arrogant comment made by the United Power Line Council describing ham operators as "armchair amateurs who still use vacuum tubes" speaks volumes for their professionalism (none). I'm inclined to believe that the knowledge and professionalism of the ham community outweighs the power utilities by an unmeasurable factor.

I really do want to become involved in the hobby and hate to ask this question, but does BPL really have the potential of "destroying" HF amateur radio? As someone that is just entering the hobby, should I put

consideration in changes that may be occuring in the near future when I do start purchasing equipment. (I'm sure I'll learn all this as I attend meetings, begin studying for licensing, etc, but was curious for now.)

Also, I was thinking (I'm not familiar with FCC regulations yet), but if the power companies are modulating an intelligence (internet), putting it on a carrier, putting that signal on unshielded power lines (which, in essense, become antennas), then that sounds like "radio" to me? Shouldn't the power companies be required to have a radio license to do BPL?

I plan on becoming actively involved on the BPL issue, once I become more knowledgable. If the BPL threat is as serious as I have been reading, the people making decisions on allowing it to go forward need to seriously give it more consideration. Of course, its all about $$.

Thanks!
-Eric

I don't believe the question was about license class; it was about the
HF amateur spectrum. In that case, there is no exclusive CW anywhere
on HF. On VHF, of course, there is.

Of course it wasn't about license classes...At least NOT until AFTER Brain realized that he was backed into yet another corner after stepping in the verbal cow patty he'd laid. Then he had to find SOME way of trying to keep everyone from looking at his shoes.

Too late.

The proposed division by bandwidth hasn't even gone through, and I'm already hearing from digital buffs who have plans to be able to utilize much more bandwidth than they currently do. - More bandwidth by a factor of three or four.

It sure is good to know that this has all been carefully thought over so that nobody would be edged out or marginalized by the new proposal - Not!

Jim, for a whole class of licensees, there absolutely were CW Only subbands. And if my memory serves, higher class licensees had to abide by the mode and power restrictions.

Where's Miccolis with his ham history cliff notes?

PCTA Double Standard; Case #1903:

It's OK when K8MN points out an error, but not when I do.

So back to the subject at hand... You guys are so full of it, and "it" stinks.

>

One by one, the BPL trials are shutting down with no plans to continue deployment. They have run into technical issues like interference. I also suspect the "bean counters" are finally getting a handle on the cost to deploy and are finding that it is not the economic bonanza that the advertising "smoke & mirrors" tries to use to convince people. There has been at least one published article (I've unfortunately lost the URL) by an independent analyst that shows that BPL simply will not be financially feasible.

To compete, BPL would have to have the speed and reliability of cable modem with the cost of phone modem. It isn't going to happen. Projected cost for BPL is similar to that of DSL, wireless, or cable. Those people who are willing to pay higher prices for faster service have already gone to one of these three services. Those still on phone modems stay there due to cost. BPL won't change that. Plus the reliability of BPL won't be able to match the other services. As an HF signal on an unshielded line, it will be subject to all the interference sources we hams experience such as static from storms, static from the guy down the street with the welder, static from a bad transformer in the area, etc. Plus the utilities would have to

clean up their overall powerline noise to prevent problems from that.

> Where's Miccolis with his ham history cliff notes?

Look at your FCC rule book. They had to abide by the power restrictions on 15m, 40m, and 80m in the novice subbands but not in the 10m novice subband. In the 10m novice subband, Generals and higher could use full legal limit. In all of those novice subbands, they were NOT restricted to the mode requirements of the novices. READ YOUR RULEBOOK!!! These rules have been in effect for longer than I have been licensed (1992) and I have copies of the rule books for this time period.

> feasible.

Dee's answer is spot on. I think that BPL is likely to simply fizzle out.

The hidden bugaboo in the BPL equation is that they will have to run
fiber *almost* to the house, then break it out to put it on a HV
powerline before sending it to your house. In practice this means that
in addition to the signal going to your house which needs to isolate
that HV from your computer and the rest of your household items, at the
same time, that fiber will be going past your house.

So lessee here:

A danger of high voltage paying a visit in some cases of equipment failure.

The power company will have to run essentially as much fiber as in a
fiber to the house system. And

This signal can wreak havoc on Ham radio, Airplane comms, police comms,
and all the other users of HF spectrum. Presumably the BPL signal can be
"notched out" from those services it interferes with. I personally doubt
that will work. There isn't free space on the HF bands. And it's
important to remember that we are not at the best time in the solar
cycle. when propagation returns, that BPL signal might go worldwide!

And it's important to note that all manner of things interfere with BPL
also.

Its pretty much a non-starter

They're absolutely right! "Voodoo Radio".

> In the 1980's, while I was young, I had some introduction to amateur radio.

IF BPL is widely implemented as proposed by the industry and the FCC
HF ham radio could be in for some difficult times but the final
outcome is far from clear at this point. As the weeks and months roll
on in the ham radio battle against BPL it's looking more and more like
BPL is an idea whose time will never come. I'm certainly not
abandoning my ham license or my interest in HF radio just because this
BPL bogeyman has popped up. If you find you're really interested in HF
ham radio I say go for it, getting a license is just a matter of
passing another test, you really don't have much to lose one way or
another.

> Also, I was thinking (I'm not familiar with FCC regulations yet), but if the
> power companies are modulating an intelligence (internet), putting it on a
> carrier, putting that signal on unshielded power lines (which, in essense,

Here's a site which gets into BPL from the ham radio perspective and
the fight against BPL which includes a pile of links to the info you
would find useful:

http://www.arrl.org/tis/info/HTML/plc/

I've participated in VE sessions in PA, CA, TN, and overseas with the
Armed Forces, and have never seen so much as a wink or a nod given in a test
that could even give the impression of cheating. let alone actaully happening.

The one and only time anyone MIGHT have had reason to raise suspicion was
addressed with a letter identifying a relationship between an examinee and
examiner, (cousins), and the examiner in question didn't even touch his paper
or so much as say hello to him until after the exams were done. (There were
five examiners present)

Besides...who NEEDS to cheat when the Government publishes both the questions AND the answers prior to the exam?

Every exam that I have sat on has bent-over-backwards to make sure that asolutely NO character issues are present before the exam.

>bystander"

I am not a "by stander looking it"

I could care less about talking to a "nation" that has money for weapns
but can't feed or educate it's young.

If I want T5 bad enough, I'll work it...legitimately...with a station that
has persmission to be there .Not had an M16 A3 slung over his shoulder daring
anone to tell him "no"

>as far as my logbooks are concerned.

.....trash...Pure fiction. A figment of yuur inaginatin.

>And that's just another sad fact of your life.

And yours,
>
>Best of Luck confirming Somalia, but I won't be the one to do it.

Good...I WANT it confirmed. By a legitimate praticipant. Your are NOT
legitimate.

>You're simply NIL.

ARRL DXCC says different.

You're still not in the ARRL's log either, It >>IS<< the standard by
which other ARE JUDGED.

So far you've not been able to withstand THAT scrutinty either.

I wonder why...(No,,, I don't...I already know the answer) you can't
accept that.

Steve, K4YZ

Nickle says I will do it with CW, my attic 30 meter loop

We have teachers of all levels teaching things they've never actually
done.

And then we have diminuitive man complaining about Len only being a
radio professional and not a radio amateur.

Sucks to be diminuitive man. Has diminuitive man complex and other
problems.

Yep. They're not CW-only. While Novices and Tech Pluses can only use CW on
their parts of 80/40/15, higher class licensees can use digital modes there.

Point is there's no place on amateur HF where a ham can go and only have to
deal with CW QRM. I think it would be a good idea if there were.

Take 80 meters for example. Make 3500-3575 CW-only, 3575-3725 digital and CW
(with digital having precedence) and 3725-4000 analog voice and image.
"Digital" refers to any mode other than analog voice or image - meaning digital
voice, too.

Why not?

Let's see - we disagree on many political points, like the practicality of manned space exploration. In the area of amateur radio policy, Steve thinks license fees,
and a "student" license are good ideas, while I think they're not. Steve thinks it's
practical to have 'secret' tests again, while I say it's a waste of time to pester FCC with such an idea, and that "Son of Bash" would make the point moot anyway.

And probably lots more stuff. Like how I think responding to certain folks here is a waste of time, and simply encourages them.

Besides all that, I'm a Yankee with a call from my time in New York State and he's a 4 lander.

> But that's just a guess on my part!

Disagreement without personal attacks. Watta concept, huh?

>> one other "Jim".
>
> Jimmy Who.

We know of no such person.

You seem to share Lenover21's difficulty
in referring to people by their names,
screen names, or amateur radio
callsigns.

Those who post using this screen name
wish to be anonymous. You respect the
anonymity of "Leo" and others. Why
not respect ours?

>> The only one we recall who
>> has recently written about the

billybeeper@juno.com (William) writes:

> Probably too little, too late.

How do you know?

> People
> just don't want to learn the code.

Some people don't.

Some people don't want to learn
the theory, either.

Most who are really interested
will learn at least what is needed
to pass the tests.

> Either
> that or people just don't want to become hams.

Most people are not interested in
radio as a hobby. That has
always been true.

> We have an insider who might be able to shed
> some light on those issues.

To who do you refer?

We recall that in the past, the
Morse Code tests were blamed
by some for low growth in the
number of US radio amateurs.

Both the Morse Code and
theory tests have been
repeatedly reduced, but there
has not been sustained increases
in growth.

We think N8UZE is correct: People
cannot be interested in something they
do not know about.

>Quitefine.

It seems that 'Steve' is
not the only one :-) :-)

You and Lenover21 have both
tried to be anonymous here.
You have not had a problem
with others' anonymity, as
long as they agreed with you.

You have no problem with the
anonymity of "Leo" or "Vipul".

But in our case, you are far
more interested in who we
are than in what we have to say.

That is very interesting.

>Can you explain this?

No.

Perhaps 'Steve' respects our
anonymity. Perhaps he has
changed.

Can you explain why you
respect only the anonymity of
those who agree with you?

Can you explain why you
seek to aggravate someone
you have described as "nuts"?

Hi,

Thanks for the replies. I just read them all and they provided excellent insight.

I wish I could make a more lengthly replies, but unfortunately strapped for time at the moment.

I'm planning to attent the next local event and am quite excited to (finally) become involved with this hobby.

(Its been something that I've wanted to do for a long time now.)

Thanks again! (Subscribed to this NG now and will be lurking, replying to this thread when time permits, and hopefully in the future will have a callsign to suffix here.) :^)

Some people have difficulty accepting the obvious.

>Things are not made popular by making them easy. Things are not made
>popular by giving them away.

Some things are. Ham radio licenses aren't one of those things.

>A reasonably intelligent person can learn
>the tests, the old "hard tests" tests or new "easy tests".

All license classes have been earned by kids not yet in middle school. Of
course they were bright kids in supportive ham families but they still had to
pass the tests on their own. Claims of "fraud" by a nonamateur nonwithstanding.

>get rid of the test.

"Karl"? WHo is he?

Some time back I posted the experiences of a middle-school teacher and Scout
leader here in EPA. He described first-hand how young people react to Morse
Code and ham radio. Unlike what we've been told by some, he says young people
are not driven away by Morse code or the tests. His experiences are not
unusual.

It seems to me that the people who have the most trouble with code tests are
much older....

>the technologically inclined, and we won't have to be discussing how to
>grow Ham radio.

But that door swings both ways. How many insults from newbies must an OT endure
before giving the same back?

I recall a discussion some time back where a newcomer wanted to know of a
simple, all-band, compact high performance HF antenna. Knowedgeable folk tried
to explain that you can't have all of those things at once. Newcomer said that
the OTs were simply not imaginative enough. OTs said it's basic physics.
Newsomer said OTs were lazy and stupid, and if they *really* knew anyhting
about radio they'd have solved the problem long ago. Just kept going downhill
from there.

How much of that should an OT take?

> The Morse code test could disappear tomorrow, and as long as Hams
>encouraged a welcoming atmosphere that encouraged quality, we would get
>quality. The test could be retained, and as long as newcomers could have
>a reasonable expectation that they would have a good experience, then
>the hobby would grow.
>
> We must heal ourselves!
>
Well said, but I think it's even more basic. Dee said it best: People aren't
attracted to what they don't know about. Or something similar. Most people
today don't even know amateur radio exists. Or they confuse it with cb.

That can be fixed.

Ahhhhhhh!

A disagreement on the disagreement, Jim!

I didn't say it was "practical" to close the pools...What I HAVE been saying is that we can regain the validity of what the tests are SUPPOSED to do by closing the pools...And that is to reasonably assay the intended licensee's knowledge of things electronic and practical as they pertain to Amateur Radio operations.

I am sure there is nothing at all "practical" about it. As a matter of fact, if practicality is what we want to discuss, let's just scrap the tests all together, require the applicant send in two box tops from his or her favorite breakfast cereal along with some reasonable fee and just mail them a license!

We'll save millions in test administration fees, completely sack an entire branch of ARRL headquarters, and induce a economic recovery by getting folks to drive to the supermarket and buy the cereal!

That was the case in Ohio when my 5-watts to a 1/4 wave vertical was getting into one of Warner Cable's premium movie channels (using 146 MHz) - and amplified up their line. I called Warner's customer service and complained that their cable was leaking. The customer service person then informed me that the problem was my antenna was leaking. I told her that's what antennas are supposed to do; a letter from the FCC to Warner got the leaks taken care of.

Nobody knows what He would have done, because in those times only Roman
citizens could vote anyway.

The interesting thing is to look at what He actually said and did and try to
reconcile that with various government policies.

If they have to run fiber down your street, they might as well do wi-fi
instead of BPL. The "modems" for BPL and wi-fi would cost about the
same, and wi-fi would offer better and faster service. And wi-fi
is in production so why bother with BPL? It maybe some dopey legal
thing in that only the cable company or phone company is allowed
to string fiber and set up wi-fi, thus the power company can't do
anything unless they run the signal over the power wires somewhere
to the customer. But it would be better and cheaper to find a legal
work-around for this (or just bribe someone.. ;-)).

You should have no real problem passing the written tests
other than some rules and regulations and some HF related
stuff. See http://www.aa9pw.com/ for practice tests. Also
nowadays it's only 5 words per minute Morse code for the general
and extra licenses. The tech is no code, which gives you all
ham privs above 50MHz.

There's a certain amount of that whatever hobby one gets into
to start. Say in model railroading "You dummy, you shouldn't use
a passenger engine to haul a freight train" (different gearing
and torque in the real things). Or say an AOLer trying to learn
how to be a hacker "Lamer" or "Luser". In ham radio "Lid".
What the thing is in all these things is the people. People
who understand what it's like for a beginner to get started and
trying to figure things out (and sometimes getting it wrong).
Vs someone who think that a non-expert will never learn, that
the beginner is permanently "stupid".

Many people may think that ham radio is just a glorified
version of CB. No, I'm not talking about the occasional
"lid" or newbie that gets on the air and makes errors.
Or the hams on 2m saying "10-4" on the repeater. I mean the
general chaos and ratchet jawing and echo boxes you find on CB.
That some CBers seem more interested in "broadcasting" whatnot
than actually talking to someone.

Five?..... ;^)

You know I advocate good manners always. In most cases, the newcomer can
be reigned in. Of course there are always exceptions:

> I recall a discussion some time back where a newcomer wanted to know of a
> simple, all-band, compact high performance HF antenna. Knowedgeable folk tried
> to explain that you can't have all of those things at once. Newcomer said that

> from there.
>
> How much of that should an OT take?

That newcomer was a horses ass for sure. But you run into those once in
a while. Odd that a person that knew that if experienced users knew
anything, they would know how ot bend the laws of physics! If he knew,
he would already know how to make that WonderAntenna!. But I don't think
that diminishes my point. Smart Young Pup syndrome exists everywhere,
and Ham radio is no exception. Old timers should know better, and we
should "suffer the newbies" for Ham radio's sake.

Besides, it is a little bit of fun to watch them fall on their faces
after the confrontation. Then they tend to fall in line - and no "I told
you so's" please!

>> The Morse code test could disappear tomorrow, and as long as Hams

And if we let them know about it, they become interested, and the first thing they hear is how stupid new hams are and how BPL is going to destroy Ham radio so you might as well hang it up, and how they are no better than a bunch of CB'ers? "Knowing" of *that* is no positive thing.

The idea of fishing is not just to let them see the bait. They must be hooked and landed or else all is for naught.

I'd take it one step further - If there is fiber running past my house,
I want fiber!

The "modems" for BPL and wi-fi would cost about the
> same, and wi-fi would offer better and faster service.

Otherwise, agreed!

> And wi-fi
> is in production so why bother with BPL? It maybe some dopey legal

> work-around for this (or just bribe someone.. ;-)).

I think the big attraction to BPL is that to the techically ignorant,
it seems like a no-brainer that you can take a wire already going into
the house and just put another signal on it, and presto magic! They
don't take into account that the wires act as both a transmitting and
recieving antenna, and that the BPL equipment might just make a path
between higher voltages and their household voltages, and that a work
truck can simply drive past their house and interuppt theie porn
download with it's wideband spark noise. Wanna see some sparks? Have the
BPL backers take on the trucking industry!!!!!

Remember, there is plenty of money to be made on failures as well as
successes. Even if most people lose their money, if the "right people"
are in at the beginning, they can bail before the big fall.

Problem is that BPL is such a stupid idea that it probably won't get
off the ground. But that's a problem for them more than us.

Steve, you're merely a short, chubby, frustrated, middle-aged, sick, uniform seeking has-been who has been off his medications for far too long to return to a normal life. You've suffered agonizing personal loss, and with it much of your humanity. Apparently as a result of your pain, you lie incessantly, lack self-respect, make insane statements and accusations, and make an ass of yourself in the name of Amateur Radio, the Civil Air Patrol, and the Military Affiliated Radio System. You embarass them and you embarass amateur radio. You embarass yourself but don't seem to notice.

I have responded to your abuses with a civil tongue for far too long. You now reap what you sew. When you can respond civilly, using my correct name, and without calling me a liar, a penis, a homosexual, or a child molester, you will receive civil replies in kind. A public apology is warranted as well, but I can forego the apology if I see you making real progress.

You aren't the avenging angel of amateur radio, and you have no right to expect that your behavior is acceptable in any forum.

Until you're well, you're not worth responding to. I guess you're happy enough not being responsible for your actions. Best of Luck on your road to recovery.

Sayonara, bb

1. Read the Sermon on the mount.

2. Decide if you accept the scriptures as the word of God written.

3. Reconcile that with the Fundamentalist "Christians" that proclaim
themselves as the core of the Republican party.

No can do. The far right wing version of Christianity is something else
indeed, more likely a sort of old testament warlike, heavily public
worship oriented sort of religion.

Strange. The Republican Party is almost always disappointed by the
Christian vote. If the candidate isn't rabidly anti-abortion, the
"core" voters stay home.

>should "suffer the newbies" for Ham radio's sake.

Of course. Sometimes the best method is to simply ignore the behavior.
Point is, however, that those who get such responses for their attempts to help are much less likely to help out next time.

I went through a somewhat-similar exercise with antenna information here on rrap. Took me a few go-rounds to realize that no matter what I did, the newcomer would be overly critical, and reject all my options and suggestions. I think his real motive was to waste my time and try to make me look bad. So I just quit playing that game.

Apply that same thought to those who go around saying the Morse Code test is so unfair, it's so hard to learn, the mode is antiquated, buggy-whip comparisons, etc.

>The idea of fishing is not just to let them see the bait. They must be
>hooked and landed or else all is for naught.

To a certain extent. However, if someone is cajoled and spoon-fed too much, they learn to be helpless in certain areas. Then they balme others when they can't deal with a problem - or they just give up.

So a balance is needed. And a positive attitude.

And the truth is that widespread deployment of BPL would pretty much make HF useless for most of us hams.

>Steve, you're merely a short, chubby, frustrated, middle-aged, sick,
>uniform seeking has-been who has been off his medications for far too
>long to return to a normal life.

Hmmmm.....I'm 5' 9" and 195. For a person you allege to be "short, chubby"
and "sick", I fall well within what Docs would LIKE to see at "my age".

So much for YOUR assessment skills, eh?

As for my "meds", I am curious as to what you think they are, in as much
as they are nothing more than anti-inflammatories and some occassional Zantac.
All OTC.

Not bad for a fella nearing 50.

And you never have responded to my offer to go jogging with me. You made
fun of it, though, so I will just assume that you were trying to bark loud
enough so no one could see you cowering.

Jim Miccolis offered to take me up on a run, though. Offered to go
farther than >>I'D<< care to go!!! =)

And I love that "...uniform seeking has-been.." line! Guess I REALLY have
your panties in a knot!

Why not try Lennie's tact and come at me with "Dill Sergeant" and
"Nursie".

You'd be just as (in)effective.

>You've suffered agonizing personal
>loss, and with it much of your humanity.

Au contraire! Bug's passing only opened my eyes to greater things in
life. One of them is appreciating truth and the fullness of life that it
offers.

A lesson I see you have yet to learn. In time...in time, Brain.

>Apparently as a result of your pain...(SNIP)

And you know WHAT of any pain you think I suffer?

>you lie incessantly...(SNIP)

Suuuuuure.

>(UNSNIP)...lack self-respect....(SNIP)

Better look again.

>(UNSNIP)...make insane statements and accusations...(SNIP)

Such as....?!?!

>(UNSNIP)...and make an ass of yourself in the name of
>Amateur Radio, the Civil Air Patrol, and the Military Affiliated Radio
>System. You embarass them and you embarass amateur radio. You
>embarass yourself but don't seem to notice.

Oh, I don't mind a bit of personal embarassment, Brain. It's when you
lose that ability to objectively look at yourself that you REALLY lose
yourself. Take Lennie for example...Poor fella lost sight of objectivity
decades ago and NOW look at him...Pandering in a newsgroup for an avocation
that he's not a part of...and for what...???

Also, I have never invoked official opinion of any of the entities you
name above. All my opinions are clearly my own. I challenge you to provide a
link to a post wherein you accuse me of speaking "in the name of" ANY of those
entities other than myself.

As for "lying", Brian P. Burke has got some real brass cajones alleging
the telling of mistruths!

>I have responded to your abuses with a civil tongue for far too long.

No you haven't. You've been quite a creep. Right in Lennie's shoes.
Snug fit, too.

>You now reap what you sew.

Here's where more fun begins...(thanks for the opportunity, Brain...)

>When you can respond civilly...(SNIP)

I go out of my way to not use profantity to make my points, and do so in a
clear, concise manner. You and your mentor do not.

>(UNSNIP)....using my correct name...(SNIP)

WHICH "correct name, Brain...?!?! "William"...?!?! "BillyBeeper"...?!?!

YOU can't decide what your "correct name" is, so why do you insist anyone
else should?

>(UNSNIP)...and without calling me a liar...(SNIP)

Don't lie and you won't get called a liar. If someone accuses you of being
a liar, then present evidence to the contrary.

>(UNSNIP)...a penis...(SNIP)

I've never called you a "penis", Brain. I even doubt you have one, but that's just a guess based upon the character of your posts here...

>(UNSNIP)...a homosexual...(SNIP)

I never called you a homosexual.

I HAVE stated that it's my belief that Lennie's got his hand stuck up your backside to make your mouth move, hence my nickname of "PuppetBoy" for you.

(UNSNIP)...or a child molester, you will receive civil replies in kind.

Like YOU would know what a "civil reply" is, Brain?

I thought we had a couple weeks of that a couple months ago...then as soon as Lennie revisited the room after a short respite, you launched right back into the same old song and dance...So PLEASE don't insult anyone with the suggestion that YOU represent a hallmark of "civility", Brain...It doesn't "wash"...

>A public
>apology is warranted as well, but I can forego the apology if I see
>you making real progress.

You're due no apolgy, Brain...Not by me anyway, so if you're holding your breath, you may go ahead and exhale now. Yellow's more your color...not blue.

>You aren't the avenging angel of amateur radio...(SNIP)

Nope...Just repeatedly pointing out how you and your miscreant "mentor" take your own liberties with civility and truthfulness.

You do, afterall, provide me with more than a fair share of opportunities.

>(UNSNIP) ...and you have no right to expect that your behavior is acceptable in any forum.

I see.....

It's OK for YOU to lie, antagonize, misrepresent your identity and other well known material facts, but you take an opporutnity to suggest >>MY<< "behaviour" is not accpetable...?!?!

BBWWWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! !

>Until you're well, you're not worth responding to.

Still waiting on you to provide that documentation of training or education in whatever discipline of healthcare it is you think that you're qualified in to render a diagnosis, Brain.

As for what YOU consider "worth responding to", I am sure you're getting tired of having YOUR nose rubbed in YOUR newsgroup cowpies, so I don't blame you for making excuses for distancing yourself from them.

No reply is needed, Brain...I'll just point out your dirty laundry when you hang it and sit back and snicker...(kinda like I'm doing over most of THIS post...)

>I guess you're
>happy enough not being responsible for your actions.

My posts are signed with at LEAST my first name and Amateur call, Brain. Love them or hate them, I put my name behind them.

In THIS forum that's about as "responsible" as one can be.

I see that YOU, on the otherhand, continue to make excuses for not signing yours.

I can understand a bogus "addee" for spam control.

Not signing "Brian, N0IMD" at the bottom, however, is just cowardice and a complete lack of self respect.

>Best of Luck on your road to recovery.

Since I am not taking a trip, perhaps we should give YOU a map, Brain. You seem to be the one who is lost. Need a compass, too?

>Sayonara

Auf Wiedersehn.

Steve, K4YZ

Yep again.
>
>And the fascinating thing is that to me, that makes Neo-cons the
>ultimate liberals!!!!!
>
How so?

> Liberal!
>
It seems to me that all of this boils down to a bunch of basic problems that
nobody
really likes to look at.

1) A lot of the issues are complex, and their solutions even more so. We prefer
quick, simple, easy answers, and it's quicker, simpler and easier to label
things in an oversimplified way than to crawl through all the complexity of
real life.

For example, every so often you see the idea of a "flat tax" as a way out of
the IRS mess. Sounds good - just pay X% of your income, rather than the 1040
maze we do each spring.

But when you get down into the details it gets murky. What is "income" - do we
include interest and gains on investments, or just earnings from jobs? How

about gambling winnings? This isn't a small issue - if we include only earnings from jobs, trust-funders and people who are lucky at the casino or stock market pay no tax, while the struggling wage-earner pays more.

What about treasured deductions, like home mortgage interest, real estate taxes and exclusion of gain on a residence? If we drop all of those, house prices will plummet and some people may be forced out of their homes. The Real Estate and construction industries will take a big hit too.

The list goes on and on - medical costs, dependents, senior citizens...When you get into the details, a "flat tax" starts to look really bad.

2) We don't vote for issues. We vote for candidates. So it often comes down to "who do I trust more to do what's in my best interest?" rather than issues per se.

3) In most races our choices are very limited. Talk about Ralph all you want, but there's almost no chance he's going to get elected. Zip. Nada. His main effect may be to push the race one way or another, just like in 2000. But barring a miracle, in the end it will be Bush or Kerry for the next four years. This isn't the case in some other countries, where often candidates and governments are the result of coalitions and compromises.

End result: Americans tend to demonize the opposition in public but live with them in private. And the system perpetuates itself for fear of what real changes could do. In Colorado, there's a move to change that state's electoral college allocation from the present "winner take all" to proportional. A reasonable idea, perhaps? Well, the group which formed to oppose the change call itself "Coloradans Against A Really Stupid Idea"...or some such. Just what Jefferson imagined for civil discourse, huh?

4) In many if not most areas, registering to vote requires declaring a party allegiance. Doing so has all sorts of consequences. For example, in most places you can't vote in the other party's primary. In some areas, being registered in the "wrong" party can cost you business or other benefits. Sometimes it comes down to even stranger reasons:

In one case I know of, there was a drive to register people who traditionally had been excluded from registration by various "Jim Crow" laws. Most of thse laws were struck down by the Civil Rights Act of 1964, but the state law required that when a new voter registers there must be a member of both major parties present. And the chances of getting a member of a certain party to show up were zip.

So a member of one party reregistered as the opposition, just so that new voters could be registered.

Its a strange thing that has come about over recent years.

Neo-Cons support massive spending. In a tip of the hat to their
ancestors, they also support tax cuts. But whatever they do, they spend,
spend, spend.

Neo-Cons support using federal money to do social engineering. "Faith
based initiatives" and voucher programs are just a couple things that
come to mind.

Those are just two ways in which they resemble the liberals of old.
There are more.

Dee, the FCC dates back to 1934 and ARRL dates back to 1914.

FCC os 70 this year and ARRL is 90.

Many, many rules have CHANGED in that time.

FCC doesn't use OLD rules for new regulations.

Were there "CW-only subbands" in 1976?

My old 1976 ARRL Handbook says there were.

I could post exerpts of ARRL-reprinted FCC rules from their 1976
Handbook...showing that there were (!) "CW-only subbands on HF."

Problem is, Rev. Jim would immediately misdirect, point out flaws
in my character and repeatedly chant "Incorrect! Incorrect!"

Jimmie, why do you LIE?

I've never tried to "hide in an anyonymity" in here. My postings are clearly MINE. But, you have the audacity to assume an UNSIGNED anonymity and then chide others about it. Tsk, tsk, tsk.

> You have no problem with the
> anonymity of "Leo" or "Vipul".
>
> But in our case, you are far
> more interested in who we
> are than in what we have to say.
>
> That is very interesting.

What? Is your real identity Spock from the Star Trek original series/

Spock always said "interesting." :-)

>>Can you explain this?
>

Nuts is how nursie
acts.

Nobody needs shrink school
diplomas to observe
irrationality.

Why is Rev. Jim hiding behind
anyonymity?

Backbone broken?

Tsk.

>the tests, the old "hard tests" tests or new "easy tests".

Hey, let's all learn 1976 ham radio! Real easy then, ey?

Whenever ham radio becomes a profession, a guild, a union, or a craft,
you can make all the tests be as HARD as you want.

> It doesn't matter. If a person has to spend a few more weeks learning
>something, so be it.

Why?

Ham radio is a hobby, not a profession, guild, union, or craft...

> It won't chase them away.

Maybe true, but it won't encourage anyone, either.

> It doesn't matter if there is a Morse code test or not. Not one little
bit.

YES. It WILL matter.

> Too many people seem to have thought that elimination of the Morse code

>test would bring an influx of new eager hams. It will not.

You are a god. You have spoken!

You are also wrong.

> If you think that elimination of the Morse test will help, You are
>wrong. If you think that retention of the Morse test will help, you are
>wrong.

You are a god. You have spoken!

You are also wrong.

> Karl, for all his bluster, has no more clue about what will attract new

>people to the field than most PCTA's. He and the other CW haters simply
>hate CW, and rationalize their hatred into "Ham radio will die unless we
>get rid of the test.

Who is this "Karl," Kostco?

> Anything that needs rationalized is probably wrong to begin with. And
>they are wrong to begin with.

The reason for retention of the morse code test has been rationalized
to its death...over and over again. In repeated trite cliches.

> You probably agree so far. You won't soon.
>
> The difficulty or lack of "difficult tests" or the Morse code test
>likewise has *no* effect whatsoever on the quality of the Ham community.
>
> Ahh, what *does* grow Ham radio?
>

>insults thrown at the new guys. At one time, I would gently remind them
>that "I resemble that remark", but that gets old after the umpteenth time.

Poor baby.

> Answer me this, is that an inviting atmosphere? How many people enter
>hobbies to be ridiculed?

Around here, that's about all there are...a bunch of olde fahrt hamateurs
making like they are all gods of radio! :-)

> Hams *must* provide a welcoming atmosphere, not inject their own
>personal preferences into the mix, and take these new people and show
>them they are valued on the air. Then word of mouth will spread among
>the technologically inclined, and we won't have to be discussing how to
>grow Ham radio.

Tsk. You are asking Gods of Radio (PCTA extras) to behave like
ordinary folks! Impossible...

> The Morse code test could disappear tomorrow, and as long as Hams
>encouraged a welcoming atmosphere that encouraged quality, we would get
>quality. The test could be retained, and as long as newcomers could have
>a reasonable expectation that they would have a good experience, then
>the hobby would grow.

Irrelevant. Common sense, however right, is not operative in here.

> We must heal ourselves!

Tsk. Most of the denizens of this din of inequity have such thin skin
that they are still suffering the newsgroup wounds of years ago!

"No kids, lids, or space cadets!" :-)

Sassing the ref can get you extra penalty time. Altercations with the
Audience can get you a game misconduct! 8^)

>
> Hmmmm.....I'm 5' 9" and 195. For a person you allege to be "short,
chubby"
>and "sick", I fall well within what Docs would LIKE to see at "my age".

Sorry, nursie, but you are looking at the WRONG medical charts.

195 is too heavy for that height.

> As for my "meds", I am curious as to what you think they are, in as much
>as they are nothing more than anti-inflammatories and some occassional
>Zantac.
>All OTC.

Official Transcendental Concoctions? :-)

You have inflamations? Tsk.

> Not bad for a fella nearing 50.

Tsk. 51 years ago I began working REAL HF communications.
Big time.

Where was nursie then?

> And you never have responded to my offer to go jogging with me.

Oh, wow! An "offer" to "go jogging!" How fun!

How fun to travel over 400 miles and be away from a family to
"go jogging" with the great nursie! :-)

> And I love that "...uniform seeking has-been.." line! Guess I REALLY
>have your panties in a knot!

Are YOUR panties all olive-drab color?

Nursie hasn't posted a picture where she ISN'T wearing a uniform.

> Why not try Lennie's tact and come at me with "Dill Sergeant" and
>"Nursie".

Poor NURSIE. Complain, complain that others just don't like the
PCTA Double Standard in here. Tsk.

> Au contraire! Bug's passing only opened my eyes to greater things in
>life. One of them is appreciating truth and the fullness of life that it
>offers.

Weird. Wired. "Truth" to nursie is anything HE believes to be
truth.

>>you lie incessantly...(SNIP)
>
> Suuuuuure.

Breakthrough!

Nursie ADMITS to LYING!

"Seven hostile actions..."

"Sorry, Hans, MARS >>IS<< amateur radio!"

Nursie claims he can "call authorities to have anyone committed"
because of some idiot idea of professional qualifications.

[it's a very long list...]

> Oh, I don't mind a bit of personal embarassment, Brain. It's when you
>lose that ability to objectively look at yourself that you REALLY lose
>yourself. Take Lennie for example...Poor fella lost sight of objectivity
>decades ago and NOW look at him...Pandering in a newsgroup for an avocation
>that he's not a part of...and for what...???

Not "pandering."

Just showing that the morse code test for a radio license is old, tired,
worn-out, and just something that a few can do to make themselves
artificial "big men" in amateur radio.

Tsk, tsk. I've spent over a half century in a radio-electronics career,
as a working professional. Nursie has remained an amateur. Tsk.

> As for "lying", Brian P. Burke has got some real brass cajones alleging
>the telling of mistruths!

"Seven hostile actions..."

"Sorry, Hans, MARS >>IS<< amateur radio!"

Nursie claims he can "call authorities to have anyone committed"
because of some idiot idea of professional qualifications.

Nursie never LIES? Tsk, tsk, tsk.

> I go out of my way to not use profantity to make my points, and do so in
a
>clear, concise manner. You and your mentor do not.

Well heck and darn, gunnery nursie, don't get such a snit.

Continue to accuse boy scout leaders of being pederasts and
molesters of young boys.

Continue to label the University of Illinois as a "correspondence
school." And the same with Beloit College, University of Wisconsin
at Madison, and so forth.

Continue with your "non-profane" comments about "having a head
up the ass of another newsgroup enemy."

Continue to make scatological remarks against others, then try to
bring in their spouses, family, etc.

Heck and darn.

> YOU can't decide what your "correct name" is, so why do you insist
>anyone else should?

Manufacturing an "issue." Tsk.

Why hasn't nursie gone on more about "Quitefine" even though that
pseudonym has been outed in here?

> Don't lie and you won't get called a liar. If someone accuses you of
being
>a liar, then present evidence to the contrary.

"Seven hostile actions..."

"Sorry, Hans, MARS >>IS<< amateur radio!"

Nursie claims he can "call authorities to have anyone committed"
because of some idiot idea of professional qualifications.

Nursie needs to provide EVIDENCE of all his LYING first... :-)

> I've never called you a "penis", Brain. I even doubt you have one, but
>that's just a guess based upon the character of your posts here...

"Putz" is a Yiddish pejorative standing for penis.

You CAN verify that. And, you HAVE called both myself and Brian
that many times!

> I never called you a homosexual.

You've never called him a heterosexual, either. :-)

> I HAVE stated that it's my belief that Lennie's got his hand stuck up
your

>backside to make your mouth move, hence my nickname of "PuppetBoy" for you.

Tsk, tsk, tsk. "Clear and concise manner!" :-)

Poor baby. Can't handle opposing opinions so you resort to pejoratives.
Almost every time... tsk.

> Like YOU would know what a "civil reply" is, Brain?
>
> I thought we had a couple weeks of that a couple months ago...then as
soon
>as Lennie revisited the room after a short respite, you launched right back
>into the same old song and dance...So PLEASE don't insult anyone with the
>suggestion that YOU represent a hallmark of "civility", Brain...It doesn't
>"wash"...

Tsk, tsk, tsk! Incorrect comments by poor, offended nursie.

Brian Burke did very good on his own in here WHILE I was gone.
[it's archived in Google...:-)]

Poor gunnery nurse, veteran of "seven hostile actions," just can't
take return fire one bit.

Poor nursie really suffers when shot at in newsgroups. It's everyone
ELSE's fault, never his! :-)

> You're due no apolgy, Brain...Not by me anyway, so if you're holding your
>breath, you may go ahead and exhale now. Yellow's more your color...not
>blue.

Nursie be ham radio Avenging Angel (if not a god of radio)!

All get nastygrams from nursie for having opposing opinions to
nursie's god-like beliefs! :-)

>>You aren't the avenging angel of amateur radio...(SNIP)
>
> Nope...Just repeatedly pointing out how you and your miscreant "mentor"
>take your own liberties with civility and truthfulness.

Tsk. PCTA extra Double Standard still at work.

PCTA extras can say anything and it is ALWAYS civil and truthful!

NOT.

Tsk.

>
>Apply that same thought to those who go around saying the Morse Code test is
>so unfair, it's so hard to learn, the mode is antiquated, buggy-whip
>comparisons, etc.

Morse code testing IS unfair.

The mode IS old, slow, and prone to human error.

No other radio service uses morse code for any communications
purposes...or that service never specified its use when that
service was created.

Why do you insist that all amateurs recreate the past so much?

>>The idea of fishing is not just to let them see the bait. They must be
>>hooked and landed or else all is for naught.
>
>To a certain extent. However, if someone is cajoled and spoon-fed too much,
>they learn to be helpless in certain areas. Then they balme others when they
>can't deal with a problem - or they just give up.

Is there a "balme" in Gilead? :-)

ARRL spoon-feeds amateurs what the ARRL wants them to know.

As a result, few amateurs know what happens in the outside world
of REAL radio.

>So a balance is needed. And a positive attitude.

For a beginning of that, you (and "Quitefine") ought to learn that
others have differing opinions which are NOT "incorrect."

>And the truth is that widespread deployment of BPL would pretty much make HF
>useless for most of us hams.

Awwww... About one-third of all U.S. radio amateurs are NOT ALLOWED
on HF.

Are you so elitist that you would continue to disenfranchise one-third of your own kind by refusing them HF operating privileges?

[rhetorical question...of course you would...QED thousands of your postings in here...]

Remember Marie A's comment concerning eating and cake.

Awesome, thanks! I just bookmarked that URL and will go through the practice tests.

Yeah, I have no familiarity with any of the FCC rules and regs. I plan on picking up some resources from a bookstore after attending the next local event and get some guidance.

LOL, yep, I also have no proficiency (or even familiarity!) with Morse! I did download a few Morse training applications recently and plan on learning it.

Thanks again!

Nope, I wouldn't do that. I re-read the thread. Nothing said about CW only *now*, the question is "never was". In that case, there certainly was CW only sub-bands (at least I'm pretty sure). The novice portions of the bands when I was a novice in 1962 were portions of 80, 40, and 15 meters (there was 2 meter phone available back then for novices). Novices were crystal contol only and all amateurs were limited to 75 watts *input* in the novice bands (but higher class licensees could use VFOs). I don't recall at all where rtty was permitted, but not in the novice bands. The only 'digital' modes would have been cw and rtty. I do wish I had the old handbook from 1960 however. Lost that once I went into the service in January of 1967. Gawd, I wanna cry when I think of the *tons* of QSTs and 73s that I got rid of at that time .....

73 from Rochester, NY

Back in '76 the ITU and FCC were still using "A1, A2, F1, F2..."
designations for emissions. [was 28 years ago]

Bringing back the old, obsolete technical terms isn't too hard
(but why innaheck do that) and a simple one-page scan of one
page of band designations with modulations would prove it all.

But, lotsa folk in here wanna argue the Whichness of the What
in a flame fest of minutae. Nonsense activity.

No huhu on getting old copies of QST. ARRL sells them on CD.
ARRL also resells CQ's 3-CD set of all 22 years of articles of
Ham Radio magazine. Lots more solid radio information in HR
than them old QST hi-jinky reportings of past contests and glories
in (hah!) "radiosport." :-)

"Radiosport!" Like NBC would broadcast ANY of that! :-)

Beep, beep...

But you forget: He can't do that. That would require disclosure of his expenditures (for which he has already refused - because that would disclose his fraud as well), thus I would prevail.

Doesn't matter, they're still limited to the RF spectrum. Of which there is only one. Each fiber is a whole new bunch of unshared spectrum.

>What's a "duct" anyway?

A pipe you can pull cable(s) and/or fiber(s) through. Usually installed along
various rights-of-way, such as interstate highways.

>How many of those are running all over North
>Dakota and Idaho??

More than you might suspect.

>Most licensed car drivers follow the rules of the road even if there
>are no cops around. Most understand that the system works only
>because the rules are followed, and thus most do follow the rules.

Sort of.

Speed limits are routinely disregarded, even when gas prices are well over $2.
In some places things like signaling and allowing adequate following space are
the exception rather than the rule.

Ask any on-the-street LEO, EMT, or ER person about DWI.

The big difference in driving vs. amateur radio compliance is that if someone
violates the rules enough, they're very likely to wind up with a smashed-up
car. Or dead.

>And the same for most hams on the ham bands. There's little point
>calling CQ out of band as you won't find other hams out of band.

True. But when things get busy, like during a contest, you won't find many hams
slipping out-of-band to find a clear spot.

>And there is plenty of interesting things to do in band. As for
>super power, our legal limit is on the order of a kilowatt (varies
>a bit depending on mode and subband) which is plenty enough if
>you really gotta snag that rare DX. Throw in a beam if you
>want (though beams for 160m are kinda hard to come by...).

Yep - but OTOH there are times when full legal power isn't enough.

>Other rules like "no business traffic" are there to protect
>our bands from being taken over by business users.

Agreed!

>No broadcasting
>is also there to keep the bands useable for normal 2 way comms
>(think about how often you actually push the PTT button or
>activate the VOX, maybe 15 minutes a day at most unless you're
>calling CQ in a contest). That's a duty cycle of 1% or less

>that once every 2 weeks it drops to 0.07% duty cycle. Broadcasters
>are on about 100% of the time, and the bands would fill up pretty
>quickly with trash. Thus that rule.

Not really.

A ham broadcaster could fire up a few hours a day, or a few hours a week, and
still have a low duty cycle.

The reason is to prevent competition to the "professional" broadcasters.
>
>We don't have that many stupid rules nowadays. Used to be you
>had to mail a letter to the FCC telling if you were going to be
>mobile for more than 2 weeks. But Phil (IIRC) mentioned that
>the FCC never acted on any of that stuff, so why bother making
>hams do it? So it was dropped.

it used to be 2 *days* (48 hours)! If you were going to operate away from home
more than 48 hours, it was postcard time. And you sent the cards to the
district office for your portable/mobile location.

Yet as silly as the rule seems now, hams did it, because it was the rule.

Then there was Conelrad...
>
>> IOW, most of hamdom is pretty straight-arrow law-abiding.
>
>I've committed a few infractions by accident (phone
>in the CW band for example) but soon caught it and corrected
>it myself.

You just proved my point! Your violations were 100% unintentional and
immediately corrected once you were aware. And not repeated.

>No need for the FCC to kick down the door....
>The FCC knows that people occasionally make mistakes and
>only acts if you keep on doing it for long periods of time.
>Then it's on purpose and you know it.

And in most cases FCC waits until there are credible complaints.

>
>There's an outside chance that some of them don't know that ham radio
>exists. Nahhhh.... not likely at all....

>
HAW!!

Yes, there is that chance. But the freeband folks I've met know ham radio exists, but are not interested in being tied down by all those rules.

Lenover21 is on record saying that good manners are a sign of weakness. Oddly enough, the opposite is true.

Bluff, bluster, insults and invective are a pretty good sign of a weak argument and often of insecurity. Always has been and always will be.

The "concept" issues, Dieter, are yours.

The law allows him (and you've been told this by more than one person) to retain a certain percentage of the monies taken in.

Until you take the initiative to file a formal complaint with the IRS, all you are doing is barking at the moon. I still say that if YOU pushed the issue, YOU would wind up eating crow...EXPENSIVE crow at that.

Bill has, as of this date, "refused" nothing.

YOU have not filed a formal complaint that would require that he disclose
his finances.

He is not required to just plop open his books because someone with an
attitude says "boo" in an unmoderated newsgroup.

Unless you take the initiative to live up to your rhetoric you will not
prevail at anything.

Sure you are.

> Just showing that the morse code test for a radio license is old, tired,
> worn-out, and just something that a few can do to make themselves
> artificial "big men" in amateur radio.

How can you show that, Lennie?

You have no experience in Amateur Radio by which to make a balanced,
objective, informed opinion on the subject.

> Tsk, tsk. I've spent over a half century in a radio-electronics career,
> as a working professional.

And not one minute of it practical experience in Amateur Radio.

> Continue to accuse boy scout leaders of being pederasts and
> molesters of young boys.

And this isn't true?

Betchya there's a half dozen such stories a month alledging exactly that,
Lennie.

Are you saying that ALL those stories in the non-Amateur Radio press are
in fact untrue?

> Continue to label the University of Illinois as a "correspondence
> school." And the same with Beloit College, University of Wisconsin
> at Madison, and so forth.

I don't see any evidence that anything OTHER than a correspondence course
may have been attended, Lennie.

And I am certainly not opening any e mail from you.

> Continue with your "non-profane" comments about "having a head
> up the ass of another newsgroup enemy."

I have never mad a comment about "having a head up the ass of another
newsgroup enemy."

>> YOU can't decide what your "correct name" is, so why do you insist
>>anyone else should?
>
> Manufacturing an "issue." Tsk.

Not of MY "manufacture", Lennie.

Your boy was the one whining about not being addressed by his "correct"
name, yet hides it behind an anonymous addresses and fake names.

> Nursie claims he can "call authorities to have anyone committed"
> because of some idiot idea of professional qualifications.

I never said I can "have anyone committed".

You quoted out of context again, but that is, of course, your trademark.

>> I've never called you a "penis", Brain. I even doubt you have one, but
>>that's just a guess based upon the character of your posts here...
>
> "Putz" is a Yiddish pejorative standing for penis.

"...standing for penis", or IS penis...?!?!

> You CAN verify that. And, you HAVE called both myself and Brian
> that many times!

If the shoe fits, Lennie...

>> I never called you a homosexual.
>
> You've never called him a heterosexual, either.

Should I...??? Can you prove it? That he may have been a sperm donor does
not validate his sexual orientation.

>> Like YOU would know what a "civil reply" is, Brain?
>>
>> I thought we had a couple weeks of that a couple months ago...then as
>soon

Len occasionally tells people to shut up - either directly (as in the
classic
"Feldwebel post" of last October to K8MN) or indirectly (as above).

> >>> Extra penalty time in the box for trying to sass the audience.

> >>Sassing the ref can get you extra penalty time. Altercations with the
> >>Audience can get you a game misconduct! 8^)

> > What about fighting with the Zamboni?

> Remember that guy they found under the ice and snow in the Alps?......

Yep - over 6000 years there. They named him "Ozeit" or some such....

They just found three more, of less ancient vintage:

http://www.themercury.news.com.au/common/story_page/0,5936,10539174^401,00.html

> 8^) I don't think anyone's beaten the Zamboni yet!

Dave "The Hammer" Schultz might have (I was here in Philly for the
1973-74 and 1974-75 seasons....Flyers win Stanley cup....this town
went nuts..)

Still miss the voice of Gene Hart ("IT HIT THE POST! IT HIT THE
%$&!ING POST! THE FLYERS WIN!")

And wasn't it Fred Shero who coached the Olympic hockey team circa
1980?

One more item:

Recent industry convention giveaway was a hockey puck with company
name on it. Many uses in an engineering office: Paperweight, plan
holder-downer, coffee mug coaster, etc. Very popular.

Cute as a button, too.

NURSIE, please remind us of YOUR electronics qualifications?

NURSIE, please remind us of YOUR military radio qualifications?

NURSIE, please remind us of YOUR civilian commercial radio
qualifications?

NURSIE, please remind us of YOUR "hostile action" qualifications?

NURSIE, please remind us of YOUR electronics engineering
department expertise (after spending less than half a year as a
purchasing agent in a set-top box maker) qualifications?

NURSIE, please remind us of YOUR long career in commercial
industry in any other field of work?

NURSIE, please remind us of YOUR qualifications to read
federal agency documents and directives and then bluffingly
blurt "MARS >>IS<< amateur radio"?

>>> Not bad for a fella nearing 50.
>>
>> Tsk. 51 years ago I began working REAL HF communications.
>> Big time.
>>
>> Where was nursie then?
>
> I can guarantee you I wasn't making up stories about my army "career" a
>the expense of my character, Lennie.

NURSIE, I've NOT had to "make up anything" about my military service.

It's all on documents at NARA in St. Louis.

It's in the experiences of other hams such as Gene, N2JTV, who served
WITH me at the same time.

It's even in the Pacific edition of the military newspaper Stars and
Stripes, in their 10 November 2002 edition...including six photos
that I took.

Neither my release from military service (as an E-5 sergeant) nor my
Honorable Discharge papers have anything about any "medical
release" conditions prompting any early exit.

I served, did my job, got promoted regularly, had an interesting
experience that sold me on REAL radio communications...which
led to a major career goal change that I followed.

NURSIE, you keep claiming I was a "radio clerk" and "dishonor
the men of my unit." I told you my MOS in a description (that's also
on the NARA documents) as a supervisory rank in microwave radio
relay operations and maintenance and I told you I HONOR the men
of my military unit who died while on duty.

If you wish to say that the National Archives and Records
Administration "LIE" then that's your crazy distortion of reality.

I still have a list of ALL the names of members of my Signal
Battalion who died on duty, before and after I served that unit.
I HONOR their memory. They were signalmen, serving their
country. I am PROUD to have served in that unit.

>>> Why not try Lennie's tact and come at me with "Dill Sergeant" and
>>>"Nursie".
>>
>> Poor NURSIE. Complain, complain that others just don't like the
>> PCTA Double Standard in here. Tsk.

>
> It wasn't a complaint, Lennie. You're quoting out of context again.

No, quoting myself. You are a NURSE. You ACT like a DILL
(not "drill") sergeant...one can see your pursed lips as you shout
emotion-filled orders, sour of mind, trying to chew out those who
don't agree with your opinions.

Sorry, NURSIE, a hobby is NOT "for the corps, god, and country."

>>> Oh, I don't mind a bit of personal embarassment, Brain. It's when you
>>>lose that ability to objectively look at yourself that you REALLY lose
>>>yourself. Take Lennie for example...Poor fella lost sight of objectivity
>>>decades ago and NOW look at him...Pandering in a newsgroup for an avocation

>>
>> Not "pandering."
>
> Sure you are.

Pander: "1. a procurer, pinp; 2. one who helps others satisfy their
vices." [dictionary definition]

Not I. I'm just trying to influence the elimination of the morse code
test for any U.S. radio license.

What I encounter is a rather fantastic antagonism from the PCTA
who insist that such things are "incorrect," "in error," etc. and
immediately try to misdirect the subject by making all kinds of
pejorative personal comments as alleged "replies."

>> Just showing that the morse code test for a radio license is old, tired,

>> artificial "big men" in amateur radio.
>
> How can you show that, Lennie?
>
> You have no experience in Amateur Radio by which to make a balanced,
>objective, informed opinion on the subject.

Tsk, tsk, tsk. Let NURSIE chew on the following:

NURSIE has NO EXPERIENCE in national politics to make any
balanced, objective informed opinion on national politics, yet
blithers on in here about that.

NURSIE has NO EXPERIENCE in national economics to make
any balanced, objective informed opinion on economics, yet
blithers on in here about that.

NURSIE has NO EXPERIENCE in electronics engineering to
make any balanced, objective informed opinion on national
politics, yet blithers on in here about that.

NURSIE has NO EXPERIENCE in military communications
to make any balanced, objective informed opinion on military
radio, yet blithers on in here about that.

NURSIE has NO EXPERIENCE in commercial communications
to make any balanced, objective informed opinion on commercial
radio, yet blithers on in here about that.

NURSIE has NO EXPERIENCE in aerospace and spaceflight
to make any balanced, objective informed opinion on space
subjects, yet blithers on in here about that.

NURSIE has NO EXPERIENCE in magazine publishing on a
national scale to make any balanced, objective informed
opinion on anything in publishiing, yet blithers on in here
about that.

NURSIE can only hold up his beloved AMATEUR license and
make hisself into a god of radio far superior to others.

>> Tsk, tsk. I've spent over a half century in a radio-electronics career,
>> as a working professional.
>
> And not one minute of it practical experience in Amateur Radio.

Incorrect. I have NOT been licensed as any AMATEUR radio
operator...only as a COMMERCIAL, professional radio operator.

NURSIE wishes to dismiss any electronics hobbyist of any
electronic field other than amateur radio who does not have that
beloved AMATEUR license. Why?

>> Continue to accuse boy scout leaders of being pederasts and
>> molesters of young boys.
>
> And this isn't true?

NURSIE has directly insulted Brian Burke of that in here.

>> Continue to label the University of Illinois as a "correspondence
>> school." And the same with Beloit College, University of Wisconsin
>> at Madison, and so forth.
>
> I don't see any evidence that anything OTHER than a correspondence course

Poor Diminutive Man, still on the INSULT trail.

Write the University of Illinois and ask them about "correspondence
courses." Use a website if you don't know how to put it civily on paper.

> And I am certainly not opening any e mail from you.

Why? Are you AFRAID?

>> Continue with your "non-profane" comments about "having a head
>> up the ass of another newsgroup enemy."
>
> I have never mad a comment about "having a head up the ass of another
>newsgroup enemy."

Incorrect. You've insulted Brian Burke of doing just that.

>>> YOU can't decide what your "correct name" is, so why do you insist
>>>anyone else should?
>>
>> Manufacturing an "issue." Tsk.
>
> Not of MY "manufacture", Lennie.

Yes it is. AOL allows up to 7 screen names for any subscriber.

As an AOL subscriber yourself you SHOULD know that.

My LEGAL NAME is fine, has never been changed.

NURSIE's legal name is NOT "K4CAP." It isn't "K4YZ" either.

My LEGAL NAME has appeared in publication bylines in
national and international printed publications.

> Your boy was the one whining about not being addressed by his "correct"
>name, yet hides it behind an anonymous addresses and fake names.

Try to figure out what is "correct" and what is "wrong." In REALITY.

Brian Burke never tried to hide his identity. He used a different
screen name to avoid spamming. That is a legitmate process.

NURSIE never challenged the screen name of "Quitefine" yet that
pseudonym has been outed in here as another PCTA extra.

Would NURSIE rather have a jumble of numbers and letters as a
"real" screen name? Under NURSIE rules, that would be WRONG.
Yet thousands upon thousands of Internetters use those screen
names.

>> Nursie claims he can "call authorities to have anyone committed"
>> because of some idiot idea of professional qualifications.
>
> I never said I can "have anyone committed".

Tsk, tsk, tsk. NURSIE THREATENED to do that.

Let's see NURSIE ACTUALLY DO THAT ACT.

NURSIE can't follow through...can't back up what he said...

>>> I've never called you a "penis", Brain. I even doubt you have one, but
>>>that's just a guess based upon the character of your posts here...
>>
>> "Putz" is a Yiddish pejorative standing for penis.

Which is NURSIE's "civil discourse" style in here.

> Truthful?
>
> You haven't proved otherwise.

Nonsense wording, trying to manufacture another dispute.

NURSIE doesn't accept proof, will not communicate with any
references, cannot do anything that would upset his INSULTS.

NURSIE manufactures "statements" from "others" about
my personal character. Those are outright LIES, manufactured
out of thin air, cannot be referenced, are all FALSE.

That is the sort of "civil discourse" all readers have come to expect.

As well as that wonderful sign-off (more "civil discourse"):

> Putz.

Ptui.

We should be kinder to cross-stitchers. "DMC" is an acronym
for one company's name that makes floss for cross-stitchers.
Good stuff. ["floss" is what the colored thread is called, used
in "cross-stitching," a form of embroidery]

Tens of thousands of cross-stitchers in the USA, happy with
their absorbing hobby.

On the other hand, maybe gunnery nurse Yellyell does cross-
stitching? He always very emotional and cross.

He keeps me in stitches. I give him the needle. :-)

Yellyell embroiders imagination into fantasy facts.

"A stitch in time won't make the clock run fine..."

As his tailor told him, "You rip what I sew, I take you apart."

That "iceman" was probably a PCTA extra clutching a code key
in his dead fist. Check with a bio-historian...or the ARRL website.

Nobody in the rest of the world has invented a better ice surfacing
machine than the Zamboni. Invented and made right here in
southern California.

"A Zamboni gets through when nothing else will...."

Hi hi.

Hmmm...I've heard the term "tax-and-spend-liberals". What you're describing is
"borrow and spend"....
>
>Neo-Cons support using federal money to do social engineering. "Faith
>based initiatives" and voucher programs are just a couple things that
>come to mind.

Almost *anything* the govt. does is a form of social engineering. Tax
deductions for home mortgage interest and real estate taxes, plus FHA/VA loans,
equals "social engineering" to allow more people to own their own homes. Which
isn't a bad thing, IMHO.

"Faith based intitiatives", however, come too close to blurring the
church-state distinction/separation.

>Those are just two ways in which they resemble the liberals of old.
>There are more.

Such as?

What, did he fly or something? I might be able to enjoy that.

I think he's a pig.

>> Please remind us of your healthcare certifications, licensure,
>education
>>or training, Lennie...?!?!?
>
> NURSIE, please remind us of YOUR electronics qualifications?

Over 30 years in Amateur Radio. Eighteen and an half in USMC Avionics.

> NURSIE, please remind us of YOUR military radio qualifications?

More than you. By a mile. You were nothing more than a radio mechanic.
That's ALL the evidence you have ever provided this forum. YOU were NEVER a
"military radio operator".

> NURSIE, please remind us of YOUR civilian commercial radio
> qualifications?

None. Not pertinent in an AMATUER RADIO forum.

> NURSIE, please remind us of YOUR "hostile action" qualifications?

Not pertinent in an AMATEUR RADIO forum.

> NURSIE, please remind us of YOUR electronics engineering
> department expertise (after spending less than half a year as a
> purchasing agent in a set-top box maker) qualifications?

I didn't work for a "set top box maker", Lennie. The "company" I worked
for was a subsidiary. I was not an employee of ANTEC. You were told this
before, but still try to use it as a diminuitive.

It doesn't work.

> NURSIE, please remind us of YOUR long career in commercial
> industry in any other field of work?

Not pertinent in an AMATEUR RADIO forum, Lennie.

> NURSIE, please remind us of YOUR qualifications to read
> federal agency documents and directives and then bluffingly
> blurt "MARS >>IS<< amateur radio"?

Sorry Lennie, it is.

No Amateur Radio, No MARS. They can re-name it, repackage it, do whatever they want to it, but in it's current embodiment, take away Amateur Radio and there is NO MARS.

That's a fact that even YOU can't spin out of.

>>>> Not bad for a fella nearing 50.
>>>
>>> Tsk. 51 years ago I began working REAL HF communications.
>>> Big time.
>>>
>>> Where was nursie then?
>>
>> I can guarantee you I wasn't making up stories about my army "career" a
>>the expense of my character, Lennie.
>
> NURSIE, I've NOT had to "make up anything" about my military service.

Sure you have. You have repeatedly tried to bluff your way into a more "robust" military career by trying to link your "service" at a rear area relay station in Japan with the deaths of Army KIA's in Korea.

That in and of itself makes you a creep of unfathomable depth.

> It's all on documents at NARA in St. Louis.

Not the parts you tried to push off on us here.

I am sure you are sorry you got caught doing it, but you did.

Sucks to be you.

> It's in the experiences of other hams such as Gene, N2JTV, who served
> WITH me at the same time.

Too bad Gene didn't get a chance to read some of the cowardly crap you pulled in here.

> It's even in the Pacific edition of the military newspaper Stars and
> Stripes, in their 10 November 2002 edition...including six photos
> that I took.

Whoopie doo.

Two pictures I took wound up in Naval Air News and that has a far wider distribution that PacS&S. So give me a Pulitzer.

> Neither my release from military service (as an E-5 sergeant) nor my
> Honorable Discharge papers have anything about any "medical
> release" conditions prompting any early exit.

And that has WHAT to do with your rantings in an AMATEUR RADIO forum, Lennie?

> I served, did my job, got promoted regularly, had an interesting
> experience that sold me on REAL radio communications...which
> led to a major career goal change that I followed.

And that has WHAT to do with your rantings in an AMATEUR RADIO forum,
Lennie?

> NURSIE, you keep claiming I was a "radio clerk" and "dishonor
> the men of my unit." I told you my MOS in a description (that's also
> on the NARA documents) as a supervisory rank in microwave radio
> relay operations and maintenance and I told you I HONOR the men
> of my military unit who died while on duty.

Your MOS has nothing to do with ANYthing, Lennie, this forum especially.

As for your "dishonor", it comes from your rantings in this forum wherein
you tried to embellish your own "career" by somehow trying to link it with Army
KIA's that occured three years and 300 miles away.

> If you wish to say that the National Archives and Records
> Administration "LIE" then that's your crazy distortion of reality.

I don't dispute your alleged MOS or that you were in Japan, Lennie...Not
by a mile.

What I "dispute" is your cowardly attempts to link that service with the
guys in Korea.

> I still have a list of ALL the names of members of my Signal
> Battalion who died on duty, before and after I served that unit.
> I HONOR their memory. They were signalmen, serving their
> country. I am PROUD to have served in that unit.

I am sure you are proud Lennie.

You just have a hard time seperating THEIR sacrifice from YOUR rantings.

>>>> Why not try Lennie's tact and come at me with "Dill Sergeant" and
>>>>"Nursie".
>>>
>>> Poor NURSIE. Complain, complain that others just don't like the
>>> PCTA Double Standard in here. Tsk.
>>
>> It wasn't a complaint, Lennie. You're quoting out of context again.
>
> No, quoting myself. You are a NURSE. You ACT like a DILL
> (not "drill") sergeant...one can see your pursed lips as you shout
> emotion-filled orders, sour of mind, trying to chew out those who
> don't agree with your opinions.

One can only "see" those things, Lennie, because in order for your rants
to work for you you HAVE to believe that's true.

It's not. It's a loss of continuity with reality on your part.

Sucks to be you.

> Sorry, NURSIE, a hobby is NOT "for the corps, god, and country."

Not for YOU it isn't, Lennie.

Other than being obnoxious and antagonistic, you have no commitment to ANYthing, and I think that's what twists your shorts most about Amateur Radio...everyday people doing things that you somehow think only YOU are qualified to do.

>>>> Oh, I don't mind a bit of personal embarassment, Brain. It's when
>you
>>>>lose that ability to objectively look at yourself that you REALLY lose
>>>>yourself. Take Lennie for example...Poor fella lost sight of objectivity
>>>>decades ago and NOW look at him...Pandering in a newsgroup for an

>>>>that he's not a part of...and for what...???
>>>
>>> Not "pandering."
>>
>> Sure you are.
>
> Pander: "1. a procurer, pinp; 2. one who helps others satisfy their
> vices." [dictionary definition]

And that's exactly what you are doing.

Pimping yourself as the embodiment of radio gratification.

Problem is you ahven't figured out that we prefer to use radios.

> Not I. I'm just trying to influence the elimination of the morse code
> test for any U.S. radio license.

No, you're not.

You're doing your "best" to be antagonistic.

The FCC already set the tone for the elimination of the Code test over a decade ago.

Ergo your actions here are meant to be nothing more than boil on Amateur Radio.

In that effort you are succeeding.

> What I encounter is a rather fantastic antagonism from the PCTA
> who insist that such things are "incorrect," "in error," etc. and
> immediately try to misdirect the subject by making all kinds of
> pejorative personal comments as alleged "replies."

The really great thing is that the "...kinds of pejorative personal comments" are just icing on the cake. It hasn't taken much to let the air out of most of your rantings, Lennie.

>>> Just showing that the morse code test for a radio license is old, tired,
>>> worn-out, and just something that a few can do to make themselves

>>> artificial "big men" in amateur radio.
>>
>> How can you show that, Lennie?
>>
>> You have no experience in Amateur Radio by which to make a balanced,
>>objective, informed opinion on the subject.
>
> Tsk, tsk, tsk. Let NURSIE chew on the following:
>
> NURSIE has NO EXPERIENCE in national politics to make any
> balanced, objective informed opinion on national politics, yet
> blithers on in here about that.

I am a registered voter and have voted in every presidential and
congressional election since I turned 18. I missed some Ohio state elections
when overseas in 82 and 88. Oh well.

> NURSIE has NO EXPERIENCE in national economics to make
> any balanced, objective informed opinion on economics, yet
> blithers on in here about that.

I pay taxes and have been involved in several state and local tax
propositions.

> NURSIE has NO EXPERIENCE in electronics engineering to
> make any balanced, objective informed opinion on national
> politics, yet blithers on in here about that.

Whoa! I need to be an electronics engineer in order to discuss "national
politics"...?!?!

Lennie, you're slathering all over the keyboard again! You've got your
short in such a twist you can't even keep your insults straight...! ! ! !

BBWWWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! !
! ! !!

> NURSIE has NO EXPERIENCE in military communications
> to make any balanced, objective informed opinion on military
> radio, yet blithers on in here about that.

Sorry. Wrong.

> NURSIE has NO EXPERIENCE in commercial communications
> to make any balanced, objective informed opinion on commercial
> radio, yet blithers on in here about that.

I don't "blither on" in this forum about "commercial communications".

That's YOUR schtick. hasn't worked in the last 10 years, it doesn't work
now.

> NURSIE has NO EXPERIENCE in aerospace and spaceflight
> to make any balanced, objective informed opinion on space
> subjects, yet blithers on in here about that.

And YOU do...?!?!

BBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHA! ! ! ! ! ! !

> NURSIE has NO EXPERIENCE in magazine publishing on a
> national scale to make any balanced, objective informed
> opinion on anything in publishiing, yet blithers on in here
> about that.

YOUR "experience" in "publishiing" was in a magazine that went toes-up
with you as an "associate editor.

And by YOUR "rules of engagement", we can assume that your typo

> NURSIE can only hold up his beloved AMATEUR license and
> make hisself into a god of radio far superior to others.

Nope.

Just an example of how much fun you can have with a radio in public,
Lennie.

Please tell us of all the FUN things YOU have done with a radio lately!

>>> Tsk, tsk. I've spent over a half century in a radio-electronics career,
>>> as a working professional.
>>
>> And not one minute of it practical experience in Amateur Radio.
>
> Incorrect. I have NOT been licensed as any AMATEUR radio
> operator...only as a COMMERCIAL, professional radio operator.

And you STILL do NOT have any practical experience in AMATEUR RADIO.

> NURSIE wishes to dismiss any electronics hobbyist of any
> electronic field other than amateur radio who does not have that
> beloved AMATEUR license. Why?

Why indeed.

I've never said any such thing.

You're lying again, Lennie.

YOU do not happen to have an Amateur license. You are a monumental creep,
which means I don't like you.

There have been many "non-Amateur" posters in here for whom I have great
respect.

I HAD respect for you at one time, but then you launched into the Nazi
rants.

>>> Continue to accuse boy scout leaders of being pederasts and
>>> molesters of young boys.
>>
>> And this isn't true?
>
> NURSIE has directly insulted Brian Burke of that in here.

He lent himself to it. Sorry. He should pay attention to what he writes,
how he wrties it, and whom he writes it about.

>>> Continue to label the University of Illinois as a "correspondence
>>> school." And the same with Beloit College, University of Wisconsin
>>> at Madison, and so forth.
>>
>> I don't see any evidence that anything OTHER than a correspondence
>course
>>may have been attended, Lennie.
>
> Poor Diminutive Man, still on the INSULT trail.
>
> Write the University of Illinois and ask them about "correspondence
> courses." Use a website if you don't know how to put it civily on paper.
>
>> And I am certainly not opening any e mail from you.
>
> Why? Are you AFRAID?

Nope.

You've just demonstrated beyond a shadow of a doubt that you are not a
trustworthy person.

>>> Continue with your "non-profane" comments about "having a head
>>> up the ass of another newsgroup enemy."
>>
>> I have never mad a comment about "having a head up the ass of another
>>newsgroup enemy."
>
> Incorrect. You've insulted Brian Burke of doing just that.

And so far, with your "rush to his rescue" rantings in this thread in the
last 24 hours, you've proven me ABSOLUTELY CORRECT.

>>>> YOU can't decide what your "correct name" is, so why do you insist
>>>>anyone else should?
>>>
>>> Manufacturing an "issue." Tsk.
>>
>> Not of MY "manufacture", Lennie.
>
> Yes it is. AOL allows up to 7 screen names for any subscriber.

This is not about "screen names", Lennie.

It's about having the gonads to sign your name to your opinions.

> As an AOL subscriber yourself you SHOULD know that.

AOL's service is not germane here, Lennie.

> My LEGAL NAME is fine, has never been changed.

When you use it.

And this was not about you. It was about Brian P Burke misrepresenting
his identity and not being man enough or having the conviction to stand behind
his opinions.

Of course you have a way of trying to make EVERY post ABOUT you.

> NURSIE's legal name is NOT "K4CAP." It isn't "K4YZ" either.

Nope. It's not.

But anyone participating in this forum who has the least little knowledge
of Amateur Radio can put either callsign into "QRZ.COM" or most other callsign
servers and get my name, address and other information pertient to my licensure
in AMATEUR RADIO.

Unfortunately for you, any person doing the same for "Leonard H. Anderson"
will only get the now-expired license information for a now-expired person.

> My LEGAL NAME has appeared in publication bylines in
> national and international printed publications.

Whoopie doo.

So has mine.

>> Your boy was the one whining about not being addressed by his "correct"
>>name, yet hides it behind an anonymous addresses and fake names.
>
> Try to figure out what is "correct" and what is "wrong." In REALITY.

Sure.

I sign my name to my posts which are attached to a screen name that
includes my Amateur Radio callsign.

Your Padawan Learner and lap-sitting puppet uses a bogus e mail address
which is alternately signed as "William" or "Billy Beeper", neither of which
are his given names. We can give him the benefit of the doubt when he just
signs it "bb", since it's as close to his real name as he will sign anything.

THAT is REALITY, Lennie.

> Brian Burke never tried to hide his identity. He used a different
> screen name to avoid spamming. That is a legitmate process.

Except the first three weeks when he used it wherein he tried to
misrepresent who he really was, having even blatantly denied to be a
"regular"...Until one day he let his mouth get ahead of his common sense and he
forgot which one he was using.

> NURSIE never challenged the screen name of "Quitefine" yet that
> pseudonym has been outed in here as another PCTA extra.
>
> Would NURSIE rather have a jumble of numbers and letters as a
> "real" screen name? Under NURSIE rules, that would be WRONG.
> Yet thousands upon thousands of Internetters use those screen
> names.

There are no "NURSIE rules" about the screen name, Lennie.

It's what someone does with it and how they sign it at the bottom.

SPAMBOT's can't read "Steve, K4YZ" as any form of valid address with which
to send spam.

The ONLY reason for NOT signing one's name to a post is a lack of
conviction in it's content.

>>> Nursie claims he can "call authorities to have anyone committed"
>>> because of some idiot idea of professional qualifications.
>>
>> I never said I can "have anyone committed".
>
> Tsk, tsk, tsk. NURSIE THREATENED to do that.
>
> Let's see NURSIE ACTUALLY DO THAT ACT.
>
> NURSIE can't follow through...can't back up what he said...

Would you REALLY want me to have a conversation about you with persons in a
positon to involuntarilly restrain you for evaluation, Lennie...?!?!

Are you SO STUPID as to think that those resources wouldn't be able to
evaluate your behaviour herein?

>>>> I've never called you a "penis", Brain. I even doubt you have one,
>but
>>>>that's just a guess based upon the character of your posts here...
>>>
>>> "Putz" is a Yiddish pejorative standing for penis.
>
> Which is NURSIE's "civil discourse" style in here.

I see...

And "Nazi", "thug", etc etc etc is somehow "OK"...?!?!

>> Truthful?
>>
>> You haven't proved otherwise.

>
> Nonsense wording, trying to manufacture another dispute.

Not "nonsense wording".

You have yet to prove me untruthful, Lennie.

It really is THAT simple.

> NURSIE doesn't accept proof, will not communicate with any
> references, cannot do anything that would upset his INSULTS.

Do you REALLY want your friends and neighbors to start reading this forum
and see how you act?

If you do, I am sure we could make your conduct in this forum well known
OUTside this forum.

> NURSIE manufactures "statements" from "others" about
> my personal character. Those are outright LIES, manufactured
> out of thin air, cannot be referenced, are all FALSE.

No...They are not. The reputation you earned WAS earned by you.

I know that you think you were so universally loved and adored, but you
weren't..still aren't...again due to YOUR behaviour.

> That is the sort of "civil discourse" all readers have come to expect.
>
> As well as that wonderful sign-off (more "civil discourse"):
>
>> Putz.
>
> Ptui.
>
> LenAnderson@ieee.org

You still haven't disproven any of my assertions.

You ARE still a lying, antagonistic, disreputable putz.

Sucks to be you.

Steve, K4YZ

N2EY> Are WEP and TKIP sufficiently secure?

For my purposes, they are. WEP is known to be breakable, and TKIP
hasn't yet been properly tested, but those are the link-level
encrypted layers. 95% of what I do is done through a VNC session
tunneled through SSH -- the combination of WEP/TKIP and SSH is such
that I'm comfortable typing my GPG passphrase over the link.

Jack.

>includes my Amateur Radio callsign.

Tsk, tsk, tsk. Your AOL screen name is FALSE. :-)

> Your Padawan Learner and lap-sitting puppet uses a bogus e mail address
>which is alternately signed as "William" or "Billy Beeper", neither of which
>are his given names. We can give him the benefit of the doubt when he just
>signs it "bb", since it's as close to his real name as he will sign anything.

I have no "lap sitter" outside of any of the three cats here. :-)

In newsgroups there is NO real "signing." There's no provision for
actual SIGNING of anything. The closest one can come is a
digital coding...which you do NOT use. :-)

"K4CAP" is NOT your legal amateur callsign, is it? :-)

> THAT is REALITY, Lennie.

Poor NURSIE, still trying for a comeback and never was...

>> Brian Burke never tried to hide his identity. He used a different
>> screen name to avoid spamming. That is a legitmate process.

>> names.
>
> There are no "NURSIE rules" about the screen name, Lennie.

Yes there are! NURSIE and QUITEFINE rules.

"Quitefine" made a big huhu a while back about "signatures." A
nice misdirection which went nowhere.

> It's what someone does with it and how they sign it at the bottom.

"Spambots" do NOT read the "signature" at the end of a message.

Those can read the HEADER information. In your case, the callsign
K4CAP is NO LONGER VALID!

Sunnuvagun!

> The ONLY reason for NOT signing one's name to a post is a lack of
>conviction in it's content.

Bovine excrement.

Now...GO AHEAD AND TRY IT.

> Are you SO STUPID as to think that those resources wouldn't be able to
>evaluate your behaviour herein?

Non sequitur. You were SO STUPID as to make that claim in the
first place.

You do NOT have the authority to do so.

All you do is lay on some stupid little emotional yell-yell and think
others are even more stupid that yourself.

Okay...MAKE THAT CALL.

>>>>> I've never called you a "penis", Brain. I even doubt you have one,
but
>>>>>that's just a guess based upon the character of your posts here...
>>>>
>>>> "Putz" is a Yiddish pejorative standing for penis.
>>
>> Which is NURSIE's "civil discourse" style in here.
>
> I see...
>
> And "Nazi", "thug", etc etc etc is somehow "OK"...?!?!

Google is chock full of "Putz" sign-offs by NURSIE.

>> Nonsense wording, trying to manufacture another dispute.
>
> Not "nonsense wording".
>
> You have yet to prove me untruthful, Lennie.
>
> It really is THAT simple.

NURSIE rejects facts, doesn't check references, manufactures LIES
about what she says are "facts" and generally misbehaves in an
uncivil manner using any manner of pejoratives to suit her purpose.

...and it really IS THAT SIMPLE.

Quod Erat Demonstrandum.

>> NURSIE doesn't accept proof, will not communicate with any
>> references, cannot do anything that would upset his INSULTS.
>
> Do you REALLY want your friends and neighbors to start reading this
>forum and see how you act?

No problem to me. They know me. :-)

> If you do, I am sure we could make your conduct in this forum well known
>OUTside this forum.

Neither "you" nor those others in that "we" can't do it and have
it truthful.

Now quit shaking your "we we" and trying to threaten. It doesn't work.

>> NURSIE manufactures "statements" from "others" about
>> my personal character. Those are outright LIES, manufactured
>> out of thin air, cannot be referenced, are all FALSE.

>
> No...They are not. The reputation you earned WAS earned by you.

NURSIE manufactures "statements" from "others" about
my personal character. Those are outright LIES, manufactured
out of thin air, cannot be referenced, are all FALSE.

No matter how hard NURSIE tries to misdirect, my repeated paragraph
is TRUE.

NURSIE rejects facts, doesn't check references, manufactures LIES
about what she says are "facts" and generally misbehaves in an
uncivil manner using any manner of pejoratives to suit her purpose.

> I know that you think you were so universally loved and adored, but you
>weren't..still aren't...again due to YOUR behaviour.

You are WRONG.

I've never looked for "love" on any computer-modem communications.

You seem to be into "transference," that strange psychological twist
wherein the sufferer projects her own thoughts, ideas, emotions onto
others.

All I'm doing in this post is giving you some well-deserved return fire.

You are inundated by it. You can't fight it. All you can do is rationalize
your insult technique by the PCTA extra Double Standard....which only
proves (once again) that you just cannot abide one single little opposite
opinion.

Tsk, tsk, tsk.

> You still haven't disproven any of my assertions.

Actually, your own postings did that long ago and continued to do so
for years. For example:

"Sorry Hans, MARS >>IS<< amateur radio!"

"Seven hostile actions" without any further details of Where or When.

NURSIE still can't understand she be so WRONG on so many things!

> You ARE still a lying, antagonistic, disreputable putz.

Poor baby. Still so ANGRY. Still so OBSESSED with trying to
insult others instead of addressing subjects.

> Sucks to be you.

Only when I run the vacuum cleaner... :-)

Now quit using your little Yiddish pejorative for "penis" to prove YOU
are capable of "civil discourse." :-)

But...you can't STOP. You are obsessed with the idea and cannot stop.

Ptui.

Jim:

The key element is responsibility.

Kim:

>Then, provide nutrition guidance from the person who is already being
>supported by the welfare system and is the "jobfare" person hoping to go
>into the nutrition industry. <GRIN>

Jim:

Interesting concept!

Jim:
>> >> What about corporate welfare?

Kim:

>> >Define that for me.

Jim:

>> Corporate welfare comes in all sorts of flavors, some of which are highly
>> ingrained.

>> For example, the tax deduction for home mortgage interest is a form of
>> "corporate welfare" for the real estate industry. Imagine if that

>> deduction
>> were eliminated - fewer people would buy houses (new and used), house
>> prices
>> would drop, realtors, lenders and other connected workers would lose
>> business, etc.

Kim:

>Hmmmm....OK. When I get that tax deduction; I have already paid a higher
>income tax value (probably?) on that money. So, the government--hence, my
>fellow countrymen--have already gotten their fair share out of it. So, here
>I am with my hand out asking for a little bit back on what I've already paid
>in. Hmmmm.....do I have that right?

Jim:

Sort of.

What a deduction really does is to reduce your apparent income. If you spent $5000 on mortgage interest last year, and meet a bunch of other conditions, you can make it as if your income was reduced by $5000. But if you spent that $5000 on something else, you have to pay taxes on it.

Kim:

>I can go along with something like
>that. OK, you're going to draw the parallel where the welfare person has
>their hand out for taxes that they may have already paid in also. BUT, the
>difference here, I think, is that I am gainfully employed, gainfully
>contributing to the "good" of the economy, etc.

Jim:

The difference is that some things are deductible and some are not. Why should the govt. care if I buy a house or rent one, and reward me for the former? But they do.

Kim:

>And, I'll be the first to
>say that I don't understand the twisted (evil, to me) world of economics.
>So, if the above IS contributing to "us" in some draining way, I would not
>support it...forget about the deduction.
>
>Oh, and incidentally, I am a proponent and would support a one-rate/no
>deductions taxing system. I don't know how much of a percentage, that
>argument would have to be made to me so I could try and make sense of it.
>But, one rate for all income levels, no deductions for anyone, nada--not
>even corporate. The incentive system would have to get a whole lot more
>creative and the incenting would have to be more angled directly to the
>lines they represent.

Jim:

My point is that when you start to take people's deductions and tax credits
away, they'll fight you every inch of the way.

Jim:
>> Or consider the airline industry. Put aside the whole security issue for a
>> moment, and just look at the basic business of running a passenger
>> airline.
>>
>> Airlines don't build airports, they don't fund the air traffic control
>> system
>> nor the aviation part of the National Weather System. But they benefit
>> from
>> those resources, all of which are built for them by tax dollars. Corporate
>> welfare?

Kim:

>OH, see...there you go making my head spin.

Jim:

Sorry!

Kim:
>Yes, that sounds like getting
>something for nothing and they should support the systems from which they
>benefit. Since you seem to have some idea (maybe you're an enonomist, even)
>then does it make good sense what I say, or what is in practice now. Or, a
>little of both?

Jim:

I say that govt. needs to take a role at times, but that in the end industry
should stand on its own.

>> Or look at the interstate highway system. Corporate welfare for the
>> trucking
>> and bus industries? Before anyone says "Trucks pay road-use and fuel
>> taxes",
>> note that research showed that *one* 18 wheeler does as much wear to a

>> large-truck and bus traffic, not passenger cars or small trucks.

Kim:
>
>OK, in my fantasy world--because this one would be nearly impossible to
>accomplish, I have always wished there were commerce lanes and regular
>traffic lanes. Keep trucks, delivery vans, commercial routing, all on their
>own lanes and give me mine.

Jim:

I like that idea. I know some places where that is the rule - parts of the New Jersey Turnpike are "cars only". Many NJ and NY "parkways" (Taconic State, Palisades, Garden State, Long Island) are "cars only" - and toll-supported.

Kim:

>OK, back to reality, the trucking industry is "stealing" from the general
>public by way of what you mention above.

Jim:

Not stealing - simply receiving a form of corporate welfare. The *industry* - not individual truckers!

Kim:

> My ex-brother-in-law, who is an
>independent driver for what used to be Builders Transport (heck, I don't
>even know if they are still around) and I used to have this heated argument
>all the time. And, he used to make a, kind of, valid and good point. They
>may be stealing from "us," but if they had to pay what they (probably
>rightfully) should be paying by way of commerce fees, we'd be paying out the
>wazoo for our goods. OK, so it wasn't the angle I was arguing, at all, but
>he made/makes a valid observation.

Jim:

So we pay taxes out the wazoo instead! Not a good argument at all.

What such "corporate welfare" support does is to discourage competing transportation modes that do not get such support. That's not a good thing.
>
>> Or what about "incentives" given to companies to locate plants in a given
>> area?
>> Usually these take the form of tax reductions - are they corporate
>> welfare, because everyone else shoulders the cost?
>

Kim:

>TSK TSK TSK. I never, nor would I ever, state that I want to be taken care
>of. There was original text above about liking the door opened, while being
>able to open a door for a man without the man being offended or put out.
>And, staying home doesn't, to me, mean being taken care of. It means
>there's a benefit to both sides. I am at home, "taking care of" (so to
>speak) the domestic issues in a relationship--home, children, community,
>school, etc. and my partner/husband/mate, whatever, is away earning the
>primary funding for the household. It is their funding that determines how
>much home, children, community, school, etc., stuff the other gets to
>support. But, "being taken care of" is like a prison term to me. I suppose
>I may have (I've already snipped so I can't easily go back and look) used
>the term "taken care of," I don't know. But, if I did, I didn't mean that
>literally.

Jim:

That's a lot more clear. But it could still be argued that the person who is
staying home is "being taken care of" in some way. Actually, that's what some
of the more strident feminists pushed - that "staying home" and "being taken
care of" were inherently uneven (one-down) relationships. I can see where that
would lead you to be "anti-feminist"

Kim:
>

>maintain good work ethic, high core values, always be a positive influence
>for the work environment, etc. It would be less likely to have an even
>across-the-board equal in those areas.

Jim:

I don't know if it's easy to achieve work equality. But I do think that it
should be based on merit and nothing else.

Kim:

>would mean a poor person would have as much intellect as they. I'm sorry,
>but I didn't get that threat.

Jim:

I agree 100%!

But the problem is that what you propose and I support would cost big bucks. *Somebody* would have to pay to bring the not-so-hot schools up to the standards of the good ones. In many districts, the schools have to fight for minimal funding because the voters just don't value public education as much as in other districts.

And we also have the problem of focusing on the wrong issues. Some places get all worked up over teaching evolution, and insist on the inclusion of psuedosciences like "creationism". Meanwhile the math program is terrible.

How do we cure that sort of problem?

Kim:

>> >Environmental protection should be about nothing but good science, and

>>

Jim:

>> I bet that "indeed" went right over his head.

Kim:

>Yep, and there was a very recent post to this newsgroup that kind of
>highlighted what I'm talking about, above. We have come to be "OK" with
>hating each other for the way we think. How "American" is that?

Jim:

It's against everything "freedom" and "liberty" are supposed to mean. And yes, we see it right here, where people demonize the other side rather than simply disagreeing.

>limited to 75 watts *input* in the novice bands (but higher class
>licensees could use VFOs). I don't recall at all where rtty was
>permitted, but not in the novice bands.

Sorry, Jim, that's not the case.

When you were a Novice in 1962, RTTY was permitted in the Novice bands. Just not to Novices! On 80 it was allowed from 3500 to 3800 kHz, on 40 from 7000 to 7200, etc. (remember that the voice/image subbands were different then). So a Novice could have had to deal with RTTY QRM.

Of course in those days there weren't many hams (percentagewise) with RTTY, and they tended to operate away from the Novice segments anyway. But it was legal then for Generals, Advanceds, Extras and Conditionals to run FSK in the Novice subbands. And it's been legal ever since (including 1976) - just not for Novices, and, later, Techs-with-HF and Tech Pluses.

The reason you didn't hear amateur RTTY in the 1962 Novice bands was gentleman's agreements and good operating practice.

>The only 'digital' modes
>would have been cw and rtty. I do wish I had the old handbook from
>1960 however.

I've got a '54, '57, '64, and many more.

>Lost that once I went into the service in January of
>1967. Gawd, I wanna cry when I think of the *tons* of QSTs and 73s
>that I got rid of at that time .....

I may have some of them!

All QSTs are available on CD. But for post WW2 issues it may be cheaper to buy the actual mags used. I've got a few from that era if you're interested..

Some time back I saw a website where every issue of 73 was planned to be available. I think they'd show you a few pages, then you'd need a membership for a nominal fee to download the rest.

That's all? :-)

NURSIE not work military communications on HF? Nope.

NURSIE not work commercial communications on HF? Nope.

NURSIE not work in REAL electronics engineering? Nope.

NURSIE not work national politics in USA? Nope.

NURSIE not work in aerospace business? Nope.

NURSIE not not do much except be amateur on HF Yep.

>> NURSIE, please remind us of YOUR military radio qualifications?
>
> More than you. By a mile. You were nothing more than a radio mechanic.
>
>That's ALL the evidence you have ever provided this forum. YOU were NEVER a
>"military radio operator".

NOT "mechanic," Diminutive Man.

Fixed station operations and maintenance supervisor.

HF transmitter with 1 KW or more, dozens of them.

Microwave radio relay operations and maintenance supervisor.

Twenty-four voice channel 1.8 GHz terminals made by GE.

>> NURSIE, please remind us of YOUR civilian commercial radio
>> qualifications?
>
> None. Not pertinent in an AMATUER RADIO forum.

But NURSIE KNOW all 'bout those, talk about them in bad terms!

>> NURSIE, please remind us of YOUR "hostile action" qualifications?
>
> Not pertinent in an AMATEUR RADIO forum.

But NURSIE MAKE BIG BRAG of heroism in service! [but no dates
or other details, ey?]

>> NURSIE, please remind us of YOUR electronics engineering
>> department expertise (after spending less than half a year as a
>> purchasing agent in a set-top box maker) qualifications?

>before, but still try to use it as a diminuitive.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Antec makes "set-top boxes." They say so, show so.

What, NURSIE do "volunteer work" for good of company?

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

>> NURSIE, please remind us of YOUR long career in commercial
>> industry in any other field of work?
>
> Not pertinent in an AMATEUR RADIO forum, Lennie.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

NURSIE make big brag noises in here about "ER," medical
"expertise," and ability to "call authorities to have newsgroup
opponents 'committed!'"

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

>> NURSIE, please remind us of YOUR qualifications to read
>> federal agency documents and directives and then bluffingly
>> blurt "MARS >>IS<< amateur radio"?
>
> Sorry Lennie, it is.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

U.S. Department of Defense has directive saying what IS MARS.

NURSIE no like that. Poor NURSIE.

>> NURSIE, I've NOT had to "make up anything" about my military service.
>

> Sure you have. You have repeatedly tried to bluff your way into a more
>"robust" military career by trying to link your "service" at a rear area relay
>station in Japan with the deaths of Army KIA's in Korea.

NURSIE weird and wired.

NURSIE want to make "LIARS" out of Department of Defense, United States Army, National Archives and Records Administration, and the Pacific edition of Stars and Stripes military newspaper!

NURSIE also want to make a "LIAR" out of the private Korean War website...and anyone else who can truthfully prove things.

NURSIE need to talk to the Barkers and tell them, in no uncertain terms, that ANY honoring of Korean War dead is "dishonorable!"

> That in and of itself makes you a creep of unfathomable depth.

Psychological transference again. NURSIE look in mirror, try to call others what she see in mirror. Tsk.

>> It's all on documents at NARA in St. Louis.
>
> Not the parts you tried to push off on us here.

NARA has all my military experience documentation.

> I am sure you are sorry you got caught doing it, but you did.

"Sorry?"

I'm rather sorry to encounter such a nutso as yourself...but life is like that.

Now...tell us all about your military action heroism in those "seven hostile actions!" Like dates and locations... :-)

> Sucks to be you.
>
>> It's in the experiences of other hams such as Gene, N2JTV, who served
>> WITH me at the same time.
>
> Too bad Gene didn't get a chance to read some of the cowardly crap you

He still can if he bothers to look in from home in Long Island. :-)

I don't know why he would. Although he's been a REAL extra for a long time, this forum's basic content is NURSIE shouting, hollering, and yell-yelling at everyone else! As well as talking NATIONAL POLITICS, THE ECONOMY, SPACE BUSINESS, and other wonderful subjects where the "qualifications" require high-rate morsemanship? :-)

>> It's even in the Pacific edition of the military newspaper Stars and
>> Stripes, in their 10 November 2002 edition...including six photos
>> that I took.
>
> Whoopie doo.
>
> Two pictures I took wound up in Naval Air News and that has a far wider
>distribution that PacS&S. So give me a Pulitzer.

You keep giving your opponents a "Putziler." :-)

So, you think the STARS and STRIPES military newspaper is
"second" in distribution? What a stupid idea. The "Stripes" is
published WORLDWIDE for ALL branches, ALL members and
their dependents. Some regions get to customize parts of it,
but not all of each edition.

The Pacific edition of the STARS and STRIPES is NOT called
"PacS&S." You should not try to make up military acronyms
without authorization.

So, what edition of the Naval Air News? Did that editon carry
an accocunt of one of your heroic "hostile actions?"

>> Neither my release from military service (as an E-5 sergeant) nor my
>> Honorable Discharge papers have anything about any "medical
>> release" conditions prompting any early exit.
>
> And that has WHAT to do with your rantings in an AMATEUR RADIO forum,
>Lennie?

It should show truthfulness...unlike a Medical Discharge person
suddenly making that discharge "honorable." As you did. Tsk.

>> I served, did my job, got promoted regularly, had an interesting
>> experience that sold me on REAL radio communications...which
>> led to a major career goal change that I followed.
>
> And that has WHAT to do with your rantings in an AMATEUR RADIO forum,
>Lennie?

NURSIE, try to learn this: I was NOT a "radio clerk."

Got that?

HF communications. Big time. More transmitters than you've operated
in amateur radio. More VHF through microwave equipment than you
will never operate in amateur radio. A half century ago. Never once
did I have to operate any transmitter with morse code on-off keying.

You don't get the picture, do you? A long time ago, the U.S. military
went away from morse code for fixed-point to fixed-point worldwide
networks. Morse was on the way OUT a half century ago. Now it is
almost absent, present only in the re-enactment of "pioneer days" by
hams who were never born in those pioneer days.

> As for your "dishonor", it comes from your rantings in this forum wherein
>you tried to embellish your own "career" by somehow trying to link it with
Army
>KIA's that occured three years and 300 miles away.

Poor baby. Still ANGRY that I was a part of something and proud of it?

Why do you think (deep in your psychosis) that HONORING members
of one's own unit is "dishonoring" anything?

>> If you wish to say that the National Archives and Records
>> Administration "LIE" then that's your crazy distortion of reality.
>
> I don't dispute your alleged MOS or that you were in Japan,
>Lennie...Not by a mile.

Yes you do. My MOSs (plural) were NOT "alleged."

Why do you keep on with that manufactured dispute? It has no
place in this forum.

> What I "dispute" is your cowardly attempts to link that service with the
>guys in Korea.

What is "cowardly" about HONORING members of the 71st Signal
Service Battalion? I was a part of that Battalion.

Do you HATE the U.S. Army that much that you keep on saying
HONORS due Army members are really "dishonors?" That's crazy.

> You just have a hard time seperating THEIR sacrifice from YOUR rantings.

Oh, my. Still the HATEFUL NURSIE. Speaking the New English:
"Honor is really dishonor." Tsk, tsk, tsk.

>> No, quoting myself. You are a NURSE. You ACT like a DILL
>> (not "drill") sergeant...one can see your pursed lips as you shout
>> emotion-filled orders, sour of mind, trying to chew out those who
>> don't agree with your opinions.
>
> One can only "see" those things, Lennie, because in order for your rants
>to work for you you HAVE to believe that's true.
>
> It's not. It's a loss of continuity with reality on your part.

Now you are saying you are NOT a nurse? Oh, my, deceiving us all
these years!

Tsk. All the readers in here can see you ACT the "dill sergeant,"
trying to be the ruff, tuff, high honcho NCO lambasting the recruits.
Poor baby.

> Other than being obnoxious and antagonistic, you have no commitment to
>ANYthing, and I think that's what twists your shorts most about Amateur
>Radio...everyday people doing things that you somehow think only YOU are
>qualified to do.

Awwww....feeling ANGRY again that whatever you do isn't rewarded
with High Praise and Everlasting Love? :-)

I'm not concerned with what anyone does in their HOBBY. If they enjoy
it, fine, more power to them. Enjoy, enjoy!

So, why is there a morse code test in U.S. amateur radio...a HOBBY.

Why are you so adamant about retaining it? That test is becoming
worthless, an artifact from a bygone era. Even the FCC said (publicly)
that it doesn't serve their need in licensing amateurs.

>> Pander: "1. a procurer, pinp; 2. one who helps others satisfy their
>> vices." [dictionary definition]
>
> And that's exactly what you are doing.
>
> Pimping yourself as the embodiment of radio gratification.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!!!!

More psychological transference by NURSIE.

Too totally demented. :-)

Seek mental health counseling for your ANGER and OBSESSION,
NURSIE. It will help you and all around you.

>ANYthing, and I think that's what twists your shorts most about Amateur
>Radio...everyday people doing things that you somehow think only YOU are
>qualified to do.

NURSIE isn't an "everyday people." He a gunnery nurse, he a dill instructor marching the maggots, he a hero with "seven hostile actions" and he is da backbone of MARS regardless of what the DoD directs!

NURSIE think I not "qualified!" I not qualified for morsemanship in amateur radio. I qualified for commercial radio, for military radio, in fact any radio...receivers or transmittes, any frequency range up to 24 GHz. Been there, done that, several times over.

>> Not I. I'm just trying to influence the elimination of the morse code
>> test for any U.S. radio license.
>
> No, you're not.
>
> You're doing your "best" to be antagonistic.

Poor baby. I'm not even CLOSE to doing my wordsmithy "best" in here. :-)

> Ergo your actions here are meant to be nothing more than boil on Amateur
>Radio.

Tsk, tsk. As the "medically certified healer" you should be able to cure that boil. You haven't. Poor baby.

> In that effort you are succeeding.

Poor NURSIE. All bent out of shape for not being loved and respected like she so richly deserves?!? :-)

Relax, have a bite to eat. BOIL a three-minute egg...

> The really great thing is that the "...kinds of pejorative personal
>comments" are just icing on the cake. It hasn't taken much to let the air
>out of most of your rantings, Lennie.

What "air out of anything" other than your shouting mouth? :-)

I haven't stopped. :-)

>> Tsk, tsk, tsk. Let NURSIE chew on the following:
>>
>> NURSIE has NO EXPERIENCE in national politics to make any
>> balanced, objective informed opinion on national politics, yet
>> blithers on in here about that.
>
> Sure I do.
>
> I am a registered voter and have voted in every presidential and
>congressional election since I turned 18. I missed some Ohio state elections
>when overseas in 82 and 88. Oh well.

National politics is NOT a subject for this newsgroup...

>> NURSIE has NO EXPERIENCE in national economics to make
>> any balanced, objective informed opinion on economics, yet
>> blithers on in here about that.
>
> Sure I do.
>
> I pay taxes and have been involved in several state and local tax
>propositions.

National economics is NOT a subject for this newsgroup...

> Lennie, you're slathering all over the keyboard again! You've got your

>
>BBWWWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! !
>!
>! ! !!

NURSIE understands NOT what this newsgroup is about...

NURSIE nuts.

>> NURSIE has NO EXPERIENCE in military communications
>> to make any balanced, objective informed opinion on military
>> radio, yet blithers on in here about that.
>
> Sorry. Wrong.

NURSIE wrong. Not HF. Not big time comms. Tsk.

>> NURSIE has NO EXPERIENCE in commercial communications
>> to make any balanced, objective informed opinion on commercial
>> radio, yet blithers on in here about that.

>
> I don't "blither on" in this forum about "commercial communications".

NURSIE too busy with bad hyena imitations to understand this
newsgroup concerns amateur RADIO. [that's all she knows...]

>> NURSIE has NO EXPERIENCE in aerospace and spaceflight
>> to make any balanced, objective informed opinion on space
>> subjects, yet blithers on in here about that.
>
> And YOU do...?!?!

Yes. By at least two corporations: EOS in Pasadena (a Xerox
division) and Rocketdyne (then a division of Rockwell, later
purchased by Boeing). I'm not counting sub-contracting there,
don't have to...at a score of two to nothing agains the "team" of
NURSIE and "Quitefine," it is time to work the "Murphy Rule."

>> NURSIE has NO EXPERIENCE in magazine publishing on a
>> national scale to make any balanced, objective informed
>> opinion on anything in publishiing, yet blithers on in here
>> about that.
>
> YOUR "experience" in "publishiing" was in a magazine that went toes-up
>with you as an "associate editor.

Skip Tenney sold Ham Radio magazine after I quit them. HR had been
in independent monthly publishing for 22 years.

I'm not counting a few other non-radio-hobby related publications,
except that two of them involve personal computing.

> Just an example of how much fun you can have with a radio in public,
>Lennie.

Of course. You set the example. Act like an asshole and then play
like CB. Of course. Lotsa fun. You showed everyone how...

> I've never said any such thing.
>
> You're lying again, Lennie.

Tsk, tsk, TSK!

When confronted with what all readers have seen, NURSIE claims
he never said any such thing!!!!

NURSIE nuts.

> I HAD respect for you at one time, but then you launched into the Nazi
>rants.

Poor NURSIE. Family was in WW2 concentration camps?

NURSIE stationed in Germany after WW2? Was victim of "NAZI
oppression?" Must have been...

>> NURSIE has directly insulted Brian Burke of that in here.
>
> He lent himself to it. Sorry. He should pay attention to what he
>writes, how he wrties it, and whom he writes it about.

More transference. NURSIE doesn't pay much attention to his
emotional outbursts in here...says he "never said such a thing"
after he said it. Strange.

> You've just demonstrated beyond a shadow of a doubt that you are not a
>trustworthy person.

More transference. NURSIE doesn't pay much attention to his
emotional outbursts in here...says he "never said such a thing"
after he said it. Strange.

> digital coding...which you do NOT use. :-)
>
> "K4CAP" is NOT your legal amateur callsign, is it?

No, it's not.

But you go right ahead and plug it in to "QRZ" and see whose name
pops up, Lennie.

> > It's what someone does with it and how they sign it at the bottom.
>
> "Spambots" do NOT read the "signature" at the end of a message.

I know. Lennie.

That's EXACTLY what I said.

I specifically stated I can understand using a secondary screen
name for spam diversion.

However NOT signing a post is cowardly.

> Those can read the HEADER information. In your case, the callsign
> K4CAP is NO LONGER VALID!
>
> Sunnuvagun!

"Sunnuvagun"....My Screen name is k4yz@aol.com"

My Amateur call >>IS<< K4YZ.

And until May of 2005, anyone entering "K4CAP" into QRZ will be
redirected to K4YZ.

As of right now, anyone entering "Leonard H. Anderson" to the QRZ
search engine will be directed to the now exprired callsign of a now
expired person...

> > The ONLY reason for NOT signing one's name to a post is a lack of
> >conviction in it's content.
>
> Bovine excrement.

Nope.

Lack of conviction. Cowardice.

Nothing else.

Rest of LennieRant snipped. Nothing factual or useful there.

Steve, K4YZ

But never a radio OPERATOR.

> HF transmitter with 1 KW or more, dozens of them.

But never a radio OPERATOR.

> Microwave radio relay operations and maintenance supervisor.

But never a radio OPERATOR.

> Twenty-four voice channel 1.8 GHz terminals made by GE.

Who cares if they were made by The Hand of God?

You were never a radio OPERATOR.

> > I didn't work for a "set top box maker", Lennie. The "company" I worked

>
> What, NURSIE do "volunteer work" for good of company?
>
> BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

I wasn't an ANTEC employeee, Lennie. I worked for a subsidiary.

Sorry you have a problem with that, but have a good laugh...it IS
at your own expense.

> NURSIE want to make "LIARS" out of Department of Defense, United
> States Army, National Archives and Records Administration, and the

> Pacific edition of Stars and Stripes military newspaper!

>
> NURSIE need to talk to the Barkers and tell them, in no uncertain
> terms, that ANY honoring of Korean War dead is "dishonorable!"

But you don't honor them, Lennie.

You try to USE thier sacrifices in order to make yourself look
better in THIS forum.

It's got nothing to do with the Department of Defense.

It's got nothing to do with the Pacific Stars and Stripes or any
other veteran's organizations or websites.

It's about Leonard H. Anderson trying to use the sacrifices of
Soldiers who died in combat three years before he was even inducted in
order to somehow glorify his otherwise lackluster Army service in an
Amateur Radio newsgroup.

> > That in and of itself makes you a creep of unfathomable depth.

A "real" Extra?

Sheesh, Lennie, I've had mine for almost 24 years now. Doesn't
get much more real than that.

Your friend couldn't have had his any sooner than 1982 or 83,
judging by the callsign. His is not a vanity callsign, so it was
issued sequentially. The sequential system was introduced in 1978. I
have no idea how quickly the 1x3 block in 2-land filled up, but I
think its safe to say that N2JTV wasn't issued before 1983 or later.

Great, Lennie.

Then why don't you expend your verbose antagonisms in a military
or commercial radio related newsgroup...?!?!

This forum is about AMATEUR RADIO.

It's very apparent that you are lost and refuse to look at a map
or stop and ask directions.

I bet that drives Mrs Lennie nuts.

> NURSIE need some mental therapy, is in a good place to get it.
> She never avails herself of that.

A guy walks into the Social Services office and asks to speak to
a counsellor. He is taken to a room and after a brief wait a comely
agent comes in.

"May I help you, Sir...?"

"Yes, I am on welfare and disability and live in free, subsidized
housing, but I am tired of collecting Government checks and spending
my days at home. I want to get some education or training and get a
decent job to support myself. Can you find me a job?"

The agent turns to her computer and scrolls through several
items..."Hmmmm" she would say on one, "uh huh"...On an other, and
finally she exclaims "BINGO!"

We just had a new listing for a postion for a person as the
chauffer of a rock star's nymphomaniac teen aged daughter. You'll
have to transport her to all the concerts, take her to dinner, and
make sure she's in bed every night by 11PM, even if you have to sit on
her to get her there. There's a liberal expense account and you'll
start at $50,000 a year."

"WOW ! ! !" the guy's eyes popped open and his face lit up.

All he could think of was "You're bull!@#ing me ! ! ! !"

"Yes I am", she replied, "but YOU started it...!"

Of course; he lies. But since he's nuts he's not responsible for his
actions.

Because I do have convictions I receive a lot of flack from Yell DMC.

For instance, when Part 97 says you cannot take compensation for
amateur radio, then a repeater owner charges dues....

For instance, when Part 97 specifies only a Morse Code exam can
satisfy element 1, and the VEC's administer Farnsworth exams....

For instance, when a poster states, "Sorry Hans, MARS >>>IS<<< Amateur
Radio!"

For instance, when a poster behaves insanely, I call him nuts.

> only one.

There's only one RF spectrum but that doesn't mean that a given
frequency can only have one user. Digital comms satellite operating
frequencies are shared via a bunch of schemes.

> Each fiber is a whole new bunch of unshared spectrum.

Obviously fiber optics is the better choice vs. the satellites *IF*
the cable is in the neighborhood where service is needed. Big if.
It'll be years before optics cables are run into crossroads burgs and
made available for their use as neighborhood Wi-Fi feeds. I've watched
optics cables being run through places like Malvern. Took a tech
working in an air-conditioned mobile lab a full day to make and test a
single 1 1/2 inch splice. Which did not incxlude a repeater. Takes one
helluva lot of revenue traffic to justify those kinds of installation
outlays and that's why optics is a non-answer today except as
long-haul and/or enormous volume data pipes. Fiber optics cables are
cheaper and can provide more bandwidth than the old AT&T & Ma Bell
microwave systems and that's about as far as they've taken the optics
cables so far.

In the meanwhile back at the ranch the sattelites are already up and
running . .

Dues can hardly be considered compensation. It is perfectly legitimate to
cover the costs of repeater setup, maintenance and operations by charging
such dues. That does not violate the no compensation rule.

> For instance, when Part 97 specifies only a Morse Code exam can
> satisfy element 1, and the VEC's administer Farnsworth exams....
>

Part 97 does not define how the exam is to be administered. It simply
requires a candidate to demonstrate a minimum level of proficiency but does
not define the testing method. By the way Farnsworth is Morse code.

> Hmmm...I've heard the term "tax-and-spend-liberals". What you're describing is
> "borrow and spend"....

Sure. Don't expect a 1:1 comparison, since it is a mutated group that
spun off from the Republican party and "conservative movement".

What they are doing is MUCH worse than the old Tax and spend, because
they are not funding their spending. Their spending is the equivalent of
getting several credit cards and running them up as fast as they can
with no ability to pay them back. They could very well bankrupt the
country. All that money has to be repaid somehow. Whether it comes from
inflation or worse remains to be seen.

>>Neo-Cons support using federal money to do social engineering. "Faith
>>based initiatives" and voucher programs are just a couple things that

No, that isn't bad, but it is kind of slippery sloping my argument.
"Faith based initiative" is kind of like the "Great Society of the

liberals, if you disregard the religious aspect (which I believe is unconstitutional).

And vouchers are a transparent money grab. BTW have you heard that charter schools are doing worse than the public schools on the "No child left
behind" tests?

Hello, Jim

Well, I truly was *not* sure. Thanks for the information, however.
Amazing how long these threads get over something which is not
particularly earthshaking these days ;)

I do remember a time in the late 70s when 73 magazine was *huge*.
That magazine had to be 3/8 of an inch thick back then. I've seen
some nice articles in some of those (but they, too, are a long time
gone).

I keep thinking about getting back on HF. I'll likely go web surfing
for construction ideas on some loop antennas (I'd still like to get
back on 160 and that would be the only way I could possibly do it).
Meanwhile, it's the old dipole in the attic currently (on 10) plus 440
:(It is, of course, at right angles to the cables to the satellite
tv dish :)

Best regards from Rochester, NY
Jim AA2QA

Dee, it's just more evidence that Brain (a) doesn't understand that the
"dues" collected for the use of a repeater are for the use of the
machine....NOT for operating a radio.

The FCC has repeatedly stated that accepting funds to defray the cost of
the upkeep of a resource such as a repeater is absolutely legitimate.

Brain, like his mentor before him, convientiently dismiss or ignore FCC
rulings or regulations when it suits them.

There is no such thing as a "Farnsworth" exam.

Defunct Burma Shave signs are NOT a subject of amateur radio policy.

Why Jimmie crib all those jingles? Quitefine ought to do it.

Go back to those VERY important ham radio policy discussions such as national politics, national economy, the space business, and choo-choo trains.

Don't get in such a lather, Jimmy, you'll cut yourself....

Yell-yell will rationalize anything...

Maybe he was battered as a child?

>Because I do have convictions I receive a lot of flack from Yell DMC.

Yell-yell be da dill sergeant still. He obsessed wid it.

>For instance, when Part 97 says you cannot take compensation for
>amateur radio, then a repeater owner charges dues....

Mama Dee say dat okay.

Of course we gots da HRO stores making profit from ham radio...

>For instance, when Part 97 specifies only a Morse Code exam can
>satisfy element 1, and the VEC's administer Farnsworth exams....

Mama Dee say dat ok too. She say Part 97 doesn't describe
hamexaminations. She wrongo. We spank Mama for boo-boo?

>For instance, when a poster states, "Sorry Hans, MARS >>>IS<<< Amateur
>Radio!"

DoD ought to spank Yell-yell. :-)

>For instance, when a poster behaves insanely, I call him nuts.

...or irrational...or whacko...or crazy...or an extra? :-)

>
> This forum is about AMATEUR RADIO.

Then why have you discussed the SPACE BUSINESS at length
in here with another, neither one of you having ANY experience
in the space business?

> It's very apparent that you are lost and refuse to look at a map
>or stop and ask directions.

Tsk, tsk. I use maps all the time. MapQuest very handy for
trips. Available free over the Internet! Maps from AAA also free,
have an up-to-date collection (rather used) in the car. :-)

> I bet that drives Mrs Lennie nuts.

Not at all. Why you mention wife? You like other guys' wives?

I'll bet that drives Mrs. Nursie nuts! :-)

>> NURSIE need some mental therapy, is in a good place to get it.
>> She never avails herself of that.
>>
> Still waiting on your credentials to make such a determination.

Still waiting for those "authorities" to show up and take me away to be committed...that you said you could get with a simple phone call.

Tsk, tsk. NURSIE not have authority...or guts to try it.

> So far it's just an obvious shill to try and detract from the >black eyes you keep collecting in here.

What "black eyes," Diminutive Man?

My eyes are still blue, cute as ever. :-)

Go get some mental therapy, NURSIE. You have "qualifications" to commit yourself.

You got NO authority to commit anyone else.

>>
>> NOT "mechanic," Diminutive Man.
>>
>> Fixed station operations and maintenance supervisor.
>
> But never a radio OPERATOR.

Yes, I was. QSYing a transmitter and making sure it stays on
frequency is OPERATING.

HF comms across Pacific would routinely do about 3 QSYs per
24 hour period. With at least 30 transmitters on-circuit 24/7 that
meant at least 10 QSYs per shift.

QSYs had to be fast to minimize circuit out time, were done in
under 3 minutes...more than half of which required frequency
standards at receiver site to confirm mark and space frequencies
for RTTY circuits.

Down-time reduction was important when monthly throughput of
messages averaged 220 thousand (1955).

>> HF transmitter with 1 KW or more, dozens of them.
>
> But never a radio OPERATOR.

Yell-yell WRONGO again. See above.

Yell-yell not able to change final links on 15 KW Press Wireless
transmitter in time required. :-)

>> Microwave radio relay operations and maintenance supervisor.
>
> But never a radio OPERATOR.

Not as AMATEUR operator, Yell-yell. Try to understand that 24/7
operations is NOT the same as AMATEUR fun and games. Serious
business to maximize up-time on circuits.

>> Twenty-four voice channel 1.8 GHz terminals made by GE.
>
> Who cares if they were made by The Hand of God?

GE (General Electric Company) is NOT that religious...they just
made good radio and electronics equipment.

> You were never a radio OPERATOR.

WRONGO again. Using an AN/PRC-6 HT or the manpack (we
called it "backpack" then) AN/PRC-8 most definitely involved
OPERATING...as close to the amateur idea of OPERATING but
without all the QSLs or the fish stories of DXCC awards. :-)

> I wasn't an ANTEC employeee, Lennie. I worked for a subsidiary.
>
> Sorry you have a problem with that, but have a good laugh...it IS
>at your own expense.

Tsk, tsk, TSK! I never mentioned "ANTEC."

Doesn't matter...all you were was a purchasing agent, and for less
than half a year. NO work IN engineering, doing design or test.

>> NURSIE need to talk to the Barkers and tell them, in no uncertain
>> terms, that ANY honoring of Korean War dead is "dishonorable!"
>
> But you don't honor them, Lennie.

Poor NURSIE, got the differences of HONOR and DISHONOR all
mixed up.

> You try to USE thier sacrifices in order to make yourself look
>better in THIS forum.

? NURSIE MANUFACTURED "dishonor."

> It's got nothing to do with the Department of Defense.

Yes it does. U.S. Army part of Department of Defense. 71st
Signal Service Battalion was part of U.S. Army. I was in the 71st
as well as all those other soldiers of the 71st.

> It's got nothing to do with the Pacific Stars and Stripes or any
>other veteran's organizations or websites.

Tell that to all the military members and their dependents then.
Stars & Stripes military newspaper is published worldwide FOR
them.

Tell that to Hal and Ted Barker of the Korean War Project.

Tell them that they "dishonor" the Korean veterans by having that
website.

"Tell it to the Marines." :-)

> It's about Leonard H. Anderson trying to use the sacrifices of
>Soldiers who died in combat three years before he was even inducted in
>order to somehow glorify his otherwise lackluster Army service in an
>Amateur Radio newsgroup.

WRONGO again. Tsk. I wasn't "inducted." I was a volunteer.
That showed up on my Army Serial Number as the "RA" prefix.
Inductees got a "US" prefix on that ASN.

"Lackluster career?" I was assigned in a "rear area." Most battalions
serving an area command ARE in rear areas. Very few got a chance
to pick where they were going to be.

I never intended to make a "career" in the military. I would be drafted
soon anyway and took a personal step to volunteer. No problem.

"Lackluster?" Tsk, tsk. It was the opportunity for the radio-interested
to begin in BIG TIME communications. ACAN (Army Command and
Administrative Network) was worldwide, thousands of circuits, all
in operation 24/7. No hobby that, was military Big Business sort of
operations.

> It's about your misdeeds in THIS forum.

Tsk, tsk. In Stevieland of Fantasy, a "misdeed" is TALKING BACK
to the gunnery nurse! :-)

Poor NURSIE, still smarting about being talked-back to! Tsk.

> I am sure you ARE sorry to have encountered me.

Nah.

NURSIE just like all the other ego-boosting self-important
ignoramuses waving credientials and claiming smarts and self-
importance. Seen dozens just like her.

> Really sucks to try and pull off the silly stuf you do in here
>only to have someone who KNOWS BETTER to derail it for ya...

Okay, when I find one of those, I'll tell everyone who it is...

So far, I haven't found any that "knows better."

Hi hi and a Ho ho! :-)

Greetings from a former denizen of Palmyra and Newark...
>
>Well, I truly was *not* sure. Thanks for the information, however.

You're welcome!

>Amazing how long these threads get over something which is not
>particularly earthshaking these days ;)

Sure.

But for me the important question is: Should there be CW-only subbands? I say
yes - about the lowest 15-20% of each HF/MF hamband. Including 160.

Why not? Would it really bother anyone if 3500-3575 and 7000-7050 were CW only?
>
>I do remember a time in the late 70s when 73 magazine was *huge*.
>That magazine had to be 3/8 of an inch thick back then. I've seen
>some nice articles in some of those (but they, too, are a long time
>gone).

Yep. I never subscribed but I sure read 'em.

I went looking for that website where the guy was scanning old 73s but couldn't
find it. Maybe there were copyright issues or something.
>
>I keep thinking about getting back on HF.

DO IT.

>I'll likely go web surfing
>for construction ideas on some loop antennas (I'd still like to get
>back on 160 and that would be the only way I could possibly do it).

Do you mean horizontal loop (as in a wavelength long) or a small vertical loop?

>Meanwhile, it's the old dipole in the attic currently (on 10) plus 440
>:(It is, of course, at right angles to the cables to the satellite
>tv dish :)

(sigh)

In Palmyra I had a lovely inverted L. Out the basement window and up the side
of the house to a bracket, then out to a convenient tree in the yard. Just

about 140 feet, worked really well 80-20. Overlooked the old Erie Canal (not the modern barge canal).

As the sunspots fade the bands below 20 will just get better and better. Enjoy them while we can.

You ever get to Rick's or to Dinosaur BBQ?

73 de Jim, N2EY

To a certain extent. But ultimately there's a very definite limit. You can't put geostationary satellites just anyplace in the sky, either.

End result is that the total capacity of satellite retransmission is limited. There's also the transmission delay.

>> Each fiber is a whole new bunch of unshared spectrum.

Sure. And they'll play a role.

But as a general-purpose solution, fiber will dominate. In fact, it already
does. Satellite broadband comms will always be a supplement.

Exactly.

>Bluff, bluster, insults and invective are a pretty good sign of a weak
>argument and often of insecurity.

Very true. Some people simply cannot tolerate disagreement with their cherished opinions, and lash out at those who disagree.

Even worse, when they are proved to be in error, some people get *really* mad. But it doesn't change the facts.

Eventually the various forms of personal attack turn into variations on the theme "shut up". Of course that's amazingly ineffective in a newsgroup.

>Always has been and always will be.

Absolutely.

What's interesting is that the definitions of both "conservative" and "liberal"
are so loose and variable. Sort of a Zen thing - nobody will say what a thing
is, only what it *isn't*.

When I was a kid, the definition I heard most often was that "conservatives"
wanted "the system" stay the way it was, while "liberals" wanted to change "the
system" to make it 'better', and "radicals" wanted to throw the system away and
start over.

>inflation or worse remains to be seen.

Now I see where you're going,

The old mantra of deficit spending was that if you used the deficit money to
build up "the system", it would be paid back in the future from increased
production. For example, funding higher education so that more people have
college degrees results in those people earning more money, being unemployed
less, and paying more taxes. In theory anyway.

That got turned into "trickle down theory" in the '80s, and has been revived
recently because tax hikes would be very unpopular.
>

>
>No, that isn't bad, but it is kind of slippery sloping my argument.

Point is, if the govt. does anything at all, it's "social engineering". You can go all the way back to the 18th century, when the founders outlawed export taxes but supported import tariffs so that domestic American industry would not have to compete head-to-head with European imports. Or look at how govt. land was sold inexpensively in the 19th century to "pioneers" in order to "tame the frontier".

>"Faith based initiative" is kind of like the "Great Society of the
>liberals, if you disregard the religious aspect (which I believe is
>unconstitutional).

Actually I think the Great Society started off as a good idea. But LBJ woefully underestimated the real costs, so important parts of the programs were cut or underfunded, leaving a real mess. Which turned it from a relatively short-term fix-up program into a bunch of eternal entitlements.

>And vouchers are a transparent money grab. BTW have you heard that
>charter schools are doing worse than the public schools on the "No child
>left behind" tests?

I'd say it's too soon to tell on those programs.

But the real problems are money and rigged scales. Particularly in education.

For example, here in metro Philly it's common for Catholic parochial schools to put up big billboards in front of the school
saying how much money they saved the taxpayer. They get their figures by computing how much the local school district spends per student.

What they *don't* say is that their schools don't do the same job as the public schools. Things which are tax-funded in the public schools are parent-funded in the parochial schools. Parochials pay lower wages and accept teachers with lower qualifications. Most of all, parochial schools cherry-pick their students. They don't have to deal with physically disabled or learning-disabled children if they don't want to. Any child that is a 'problem' can be told not to return next year. Transportation is optional - there is no requirement that parochial schools serve the entire population. But public schools have to take every child who lives in the district, regardless of how many problems the child has or how much it costs. Which is how it should be.

>> "Faith based intitiatives", however, come too close to blurring the
>> church-state distinction/separation.

They're really just a way of saving a little money in the short-term, and keeping certain elements happy.

There was one teacher I had in HS that taught me something interesting. He noted that the political spectrum was a circle, and not a straight line. Using the center as a starting point, the further you traveled to the right and left, the more the positions resembled each other. Far right or far left, the adherents start demanding the elimination of individual rights, started looking to omnipotent and autocratic forms of government, and in the end, living under either far left or far right forms of government becomes the exact same thing for the average citizen.

Yup, it's all a part of the Charter/religious school vs public school
thing. they want to handpick their students, then brag about their
superiority.

While you have no experience in amateur radio, Leonard, you certainly speak from experience in your comments about writing thousands of words in order to attempt establishing a reputation as a guru. You are the most prolific of non-radio amateurs in an amateur radio newsgroup.

> Jimmie thinks he "has a future." That be enough rationalization.

"Jimmie"?

If you ever have a future in amateur radio, it will be a short one. You've talked and talked and talked the talk. You've not yet begun to walk the walk.

That is making the assumption that they even were aware of CB in the first place to have it as a comparison. There are alot of people after a certain window of time that are completely oblivious to CB.

Ryan KC8PMX

>
> You reached up and changed the channel.

WRONG!

Frequency synthesizers enabling channel-changing with ease did
not appear until the 1960s. [the first of which were the stepped
two-crystal-oscillator-bank mixed types for civil aviation] The
exact-frequency synthesizers for fixed-point HF broadcast did not
appear until about 1964.

A QSY at any ACAN station of the 1950s would involve at least 3
persons, two at a transmitter site, one at a receiver site using a
General Radio LF to HF precision frequency measuring instrument.
At ADA, Control at Chuo Kogyo (just outside of Camp Drake) would

issue the QSY order over the TTY order wire; both transmitters and frequency standards at Receivers were on that loop. Receivers "freq standards" would begin setting up for the new carrier frequency.

At transmitters, one operator disable the appropriate exciter, then would go behind the many racks of exciters (O-5s at that time) and get a crystal from the heated crystal cabinet (6 foot high, glass doors), change the crystal in the exciter from the back. ADA did their own crystal finishing. Frequencies were all given code names, for nemonic convenience not secrecy...avoided accidental transposition of numbers. Korean circuit frequency names were all given beer brands...:-)

The other person at transmitters (if only for a 1 KW Tx, the big PW-15s usually took two operators for safety) would key off the separate transmitter, reset the adjustments to a chart (prepared by maintenance specialists on the team), wait for the exciter man to finish with his task. When RF was getting to the Tx, the Tx man would tweak-tune the settings, paying close attention to neutralizing the final (BC-339s had push-pull triode 833s in PA) in addition to making sure the loading was good.

By that time, freq standards was set up and their freq meter's audio would be fed into a reserved telephone circuit pair to transmitters. We could hear it on the speakers. The trick chief would ask Control for "fox test" on the TTY circuit ("The quick brown fox...etc." from one of three such automatic cam-driven generators at Carriers in Chuo Kogyo. Exciter man would zero beat on the Mark, engage keying and set the "spread" (shift) in a double heterodyne of comparing the 850 cycle tone from Stds with a transmitter tone generator fixed at 850 cycles. Once that was set (all around the console could hear it) the trick chief signalled over the order wire for Stds to check it.

Frequency Standards would do their final measure and report the Mark and Space frequencies (if within tolerance) on the order wire TTY. If something was drifting or the measures were out of tolerance, Stds reported that, too, and we would have to tweak the exciter all over again. [accepted RTTY spread back then was 850 Hz]

Maximum time to QSY for RF out at transmitters was under 2 minutes. Total QSY time, including the Stds measurement and reporting, was under 3 minutes. That included the large PW-15s (15 KW conservative output) that had two 3-foot long copper segmented shorting bars (with two long tightening screws) which "tapped" the huge final tank coil windings.

The old pre-WW2 Western Electric SSB (12 KHz wide in the "commercial" sideband arrangement containing four 3 KHz voice bandwidth channels) was quite fussy and might take an extra minute or two, including extra time at Stds to confirm frequencies. The new Western Electric LD-T2 SSB was much better (one in 1953, four more arrived in 1955) in that 12 tuned circuits were all

servo-motor controlled from a bank of 120 potentiometers inside
that were preset to 10 "channels" or authorized carrier frequencies.
The LD-T2 was QSYed by walking up to it, operating two key
switches to disable output and modulation, pushing a "channel"
selector button, then waiting until the indicator light showed auto-
tuning was correct. Then the two key switches were returned to
normal transmit and the RF current meter on the antenna lines
checked. Took less than a minute to do that, took Stds a bit
longer to confirm the correct carrier frequency (pilot carrier in
mid-sideband).

> THAT took skill.

It did for the SSB transmitters, including the LD-T2. Maintenance
on the teams had to reset the preset pots if a new frequency was
authorized. That required the same tuning-up was with a manual-
control Tx. The difference between that and the RTTY transmitters
was the requirement to check the audio quality for both level and
distortion.

The objective was MINIMUM DOWN TIME so as to keep the up-time
for actual message transmissions maximum. A typical SSB radio
circuit carried a voice order-wire channel, an overseas radiotelephone
voice channel, and 8 to 12 TTY channels, all on the same transmitter.
At least four of the RTTY radio circuits had time-multiplexed TTY to
carry up to four TTY channels; outage on one of those circuits was
multiplied four time.

>> HF comms across Pacific would routinely do about 3 QSYs per
>> 24 hour period. With at least 30 transmitters on-circuit 24/7 that
>> meant at least 10 QSYs per shift.
>
> Ahhhhh...You changed the channel three times a day.

WRONG. I wrote TEN times per shift...on the average. We would
do at least 8 on a calm-ionosphere work shift but could do as many
as 18 QSYs if the ionosphere was doing nonsense.

At the old transmitter site on Tsukushima, commercial Japanese
power was primary. That power was not consistent and any shift
might have to do a full recheck after cutting over to standby
generators (400 KWe minimum out of six motor-generator sets).
That meant EVERYTHING that was on-circuit had to be checked,
including poor Frequency Standards having to juggle their General
Radio instrument controls for every single radio circuit and reporting
it on the order-wire. The new site at Kashiwa (later renamed Camp
Tomlinson) had 600 KWe 24/7 motor-generators and did not rely on
Japanese electric power.

> Ooooooooohhhhhhhh...NOW I am IMPRESSED!

You should be, but then you've never been tasked with that sort of
job. It's easy for you push-button black-box changers to make fun

of manual control over nearly everything.

ADA did have "VFO" control through a couple of Northern Electric tunable exciters, but nearly all the HF radios were crystal controlled, TTY through SSB. The microwave radio relay terminals (arriving late 1954) were all crystal controlled at 1.8 GHz (!). Predecessors to the uWave were TRC-1 VHF radio relay (FM, both Rx and Tx crystalled) and TRC-8 UHF radio relay (FM, Tx crystal, Rx manually tuned).

Land forces HT radio, PRC-6, was crystal-controlled, no channel changing possible. The backpack PRC-8 through -10, was actually "VFO" on low VHF, manually tuned via a built-in crystal harmonic calibrator. Surprisingly, the "PRC-8 family" was stable as well as rugged, holding its locked manually-tuned frequency within spec.

>> > But never a radio OPERATOR.
>>
>> Yell-yell WRONGO again. See above.
>
> Uh huh...So impressive...Changed the channel on the presets.

Only on the single WE LD-T2...but then I had to set up those presets from the beginning. :-) The other 35 transmitters (besides the 8 that were installed later, the new LD-T2 and the 40 KW Collins linear amplifiers, all preset pretuned) were MANUAL tuning 7-foot high transmitters.

A single Collins 1 KW Autotune transmitter was there for about a half year, but used only for the FEC Commander's aircraft. That was "traded" (?) with the USAF for a couple Wilcox HF transmitters with the old brute-force AM power amps. The Wilcox Tx was interesting in that it had 3 separate HF boxes, selectable by a switch. While that might be taken as "channelization" those were fussy beasts and had to be constantly checked if up; ADA later sent the RF part back to the depot, keeping the big AM power amp and supply, marrying it with a 1 KW BC-339 CW transmitter now becoming a 1 KW AM radio circuit. That worked just fine and could also (like the lower power truck mounted HF field radio) carry simultaneous TTY via an FSK exciter.

Except for the post-WW2 WE Tx, GE microwave terminals, and Northern Electric exciters, almost all of the equipment we used at ADA was made on contract during WW2. That includes the VHF and UHF radio relay equipment used when phone cables went down. The two ancient WE SSB transmitters were built prior to WW2. All tubes, nearly all manually operated.

> Try again, Sir Putzy.
>
> Rest of usual muck and mayhem deleted. You started off stupid
>and got worse (if that's possible)

Tsk, tsk, tsk. I see that there's no possibily of your replying in a "civil discourse" manner.

You continue to make fun of something you know absolutely nothing of and won't take the trouble to find out. Not good.

NURSIE is SPOILED by modern, solid-state, frequency-synthesized tune to any frequency with crystal stability ham equipment...and fine military airborne equipment she never once had any responsibility for designing or proving. Tsk.

NOPE. NURSIE do all the Yell-yell, then act the hypocrite and talk
about space business, national politics, the god-worshipping of Bush
and the damnation of Clinton and Kerry, and a host of OTHER
subjects which aren't even CLOSE to amateur radio policy matters.

Tsk, tsk. NURSIE again trying left-handed insult to spouse.

Is that what modern American amateur radio has come to?

U.S. ham radio is all about INSULTS against those that aren't
licensed in the amateur radio hobby?

Why doesn't "Quitefine" jump in here with a lecture on manners?

Shall we all comment something nasty about Mrs. Nursie?

No. That would be acting like yourself, and that is a definite No-No.

Get some mental help for your obsessive hate and anger, NURSIE.

It will be better for all of us, including yourself.

A very powerful image that circle thing!

I don't know that life under the two systems would be *exactly* the
same, but I do agree that it would be much more similar than either
side would like to admit!

Here's another definition:

The 'right' tends to place restrictions on *individual* behavior,
while allowing *corporate* (meaning any institution) behavior to be as
unrestricted as possible. The 'left' tends to do the exact opposite.
But at the extremes, the results become very similar.

> godsend (hehe) this was.

Short-term fix.

Here's another item for ya:

The income tax system is rigged *against* two-career married couples.
Look in the tax tables and compare the taxes paid by two single people
making, say, $40,000 each, and a married couple making $80,000. Or any
other combination you wish to try.

You'll almost certainly see that the married couple pays more tax. If
you go into itemized deductions, the situation gets even worse because
of the %AGI requirements of some deductions (like business expenses).

Back in the Carter Administration, those "tax and spend" liberals
revised the tax code so that married folks could get some of the
difference back. That provision was removed under the Reagan
Administration's move to "get the govt off your back" and the support
of "family values".

Where's the support of "family values" if the simple fact of being
married means you pay more tax?

It goes far beyond the schools, though!

Connecting with your circle idea, above, I am reminded of various utopian scenarios, ranging from the hippie commune to Ayn Rand's "Galt's Gulch" in "Atlas Shrugged". All of them "work" just fine - *if* the society and the individuals in it can rigidly control who is and is not allowed in.

This same concept holds true for some (not all) religious ideologies. After all, if everybody would just accept and practice Religion X, things would be so much better. But everyone simply won't do that - regardless of what Religion X is. Even if they accept it in name, some won't practice it, and others will argue over what Religion X really is. While denying that any of it is pure foma.

> > I'll take a look!

I did - fascinating, and more than a little scary. Most of that history isn't taught in our schools.

Lots of good points made there. For example, the demonization by some of the "Muslim world" as if all Muslims are identical. Of course Islam has a range of interpretations similar in many ways to Christianity, but it's so much easier to make 'them' the bad guys.

Or the aggressive need to spread a political ideology - by violent means, if necessary - appears at both extremes. And how the concept of free market disappears when it comes to people choosing their politics....

In some ways it reminds me of '1984''s "doublethink". Or something like this:

1) It is wrong to criticize the president in wartime
2) We are always at war

3) Why do you hate America?

--

Here's another angle for ya:

Bush wants a *constitutional amendment* outlawing same-sex marriage. But Cheney says that sort of thing (defining marriage legally) has always been left up to the states, and should continue to be left up to them.

Who do we believe? Which is the true conservative stand? Do we support individual freedom and choice, or 'traditional values'?

And consider this: If we let same-sex marriages happen, those folks will pay more tax!

Yada yada yada effect. Talk more than action, and often in
contradiction to what is done.

> Where's the support of "family values" if the simple fact of being
> married means you pay more tax?

Some say that is a bit of an attempt to get back to "one breadwinner"
families.

Utopias work well in books! Ayn was an interesting character. She had a
number of good points and concepts, and her books conveyed them fairly
well. Unfortunately, they always seemed to be "just so" scenarios to me,
and a bit of Bravo Sierra was in them too.

I think that there is a certain need, perhaps an ancient survival
mechanism, that makes many people *need* to hate others. It's too
ingrained to be a nurture thing. It's why people will kill each other
for religious reasons, often over something that happened thousands of
years ago.

It is scary. And it's pretty well written, which doesn't trip my BS
alarm. I doubt *everything* in it is true, since these things seldom are
all true, but.........

Who's traditional values? Pre-Columbian Indians revered the Berdache,
and they often married.

Yes! Fascinating is just
the word to describe it.

You probably already realize
that the babytalk and phony
accent behavior is simply
another failed attempt to get
attention and provoke an
angry response.

More fascinating to us is
the fact that some are more
interested in how something
is written, and by whom it is
written, than they are interested
in the content.

Perhaps they are afraid
of the content.

>Blackguard Vox Deus

Interesting name! Any story
connected to it? We are curious
to its meaning.

A friendly question, not a demand.

James Miccolis can now get his nasties off by being ANONYMOUS.

FASCINATING how some PCTA love to play roles by being some
"other" person.

Hypocrites.

> You probably already realize
> that the babytalk and phony
> accent behavior is simply
> another failed attempt to get
> attention and provoke an
> angry response.

Ah...so the nastygrams under the invisible blanket of anonymity
is somehow making Jimmie "more civil" in discourse?

> More fascinating to us is
> the fact that some are more
> interested in how something
> is written, and by whom it is
> written, than they are interested
> in the content.

Tsk, tsk. Any psychologist might be "fascinated" by the poor little
spoilsports who can't write near as well, nor are their self-righteous

opinions taken as divine words to be followed by "all."

Tsk.

> Perhaps they are afraid
> of the content.

No. The anonymous ones are the GUTLESS, the COWARDS,
afraid to give their own names or other ID.

Poor babies. Still suffering newsgroup wounds are you, JImmie?

>>Blackguard Vox Deus
>
> Interesting name! Any story
> connected to it? We are curious
> to its meaning.

It's only meaning is that "BVD" is as gutless as his wonderwear
is soiled. Poor baby.

> A friendly question, not a demand.

Jimmie, hoping to get some back-and-forth under anonymity, begs
for more.

James P. Miccolis, a name that will "shine" on in anonymity.

> "You shine out like a shaft of gold, when all else is darkness"

Like a "shaft," true. NOT of gold.

Jimmie, cut the crap, you aren't fooling anyone. Except nursie.

YOU are not there, James P. Miccolis.

You've put on some emperor "new clothes" and think you are stylish?

Not so. Still naked and exposed you are, Jimmie.

>>I didn't intend to fool anyone. I rarely sign off with my name or
>>call anyway. Haven't for a long time.
>
> Then why do you criticize
> others for doing the same thing?

Why do you, Jimmie?

> We did not ask Steve.
> We asked you.

Oh, oh...the royal "we we" again. Tsk.

Jimmie hit the Big Time with a certified DUAL PERSONALITY.

> We ask again:
> Is there something
> "nefarious" about
> wishing to be
> anonymous?

Quit shaking your "we we," Jimmie. What would the nuns think?

>>Simple. He won't back off.
>
> Neither will you.

So James P. Miccolis goes and gets what he thinks is an
"anonymous" screen name (he can have 7) on AOL and
ADDS MORE FUEL TO DISPUTES.

Hypocrite Jimmie, wanting calm and reasoning capitulation to his
opinions, and not getting any...making up "anonymouse" postings.

>>He doesn't know how to.
>
> Neither do you, apparently.

Actually, we CAN, PCTA extra with a Double Standard Miccolis.

Your problem (and it IS one) is being unable to stay calm and
civil (as you demand of others) and going all-out for an ANONYMOUS
ID. Not even a clever fake callsign. Or anything else.

>>His handlers cannot control him.
>
> Whom do you speak of?
> Are others somehow
> responsible for what he
> writes?

The only one responsible for YOUR writing is yourself. Why do
you pollute the very arena that you trample in daily?

Jimmie, you are playing the anonymous antagonist here, being
hypocritical to everything you've said before. Tsk. That's SICK.

>>He's a menace.
>
> How is he a menace?

Nursie has driven you over the edge, Jimmie. You've joined the
"dark side" of the Force and pretend you are Darth Vader in a
breather mask.

You come across about 2 feet tall with a dainty white hankie
instead of black helmet and black mask. :-)

> And to whom?

Only to YOURSELF. You can't see what it's done to you, so you
try to escape in your own mind.

You don't fool anyone else. Just yourself.

Think about how your behavior reflects on the amateur radio service.

It's not good.

The only one here thinking he's "fooling" anyone is YOU, Lennie.

You're not a licensed Amateur Radio operator.

You are not a licensed Aviator.

You are not a licensed healthcare provider at ANY level.

You are not respected or trusted and that's YOUR doing.

It really is THAT simple.

I think the shrinks call it "projection", Dave. But I could be mistaken. It's where someone projects what *they* do onto others' behavior. Plus they often deny their own motives.

All anyone needs to do is read rrap for a while and see who the most frequent and verbose posters here are. While I'm here often, my words are few and far between compared to the ocean of words from Len and a few others.

>You are the
>most prolific of non-radio amateurs in an amateur radio newsgroup.

Possibly the most prolific of all who post here.

>"Jimmie"?

Haven't you noticed that Len almost never addresses anyone who disagrees with him by their signature name or callsign? I don't know why that is, but the behavior is remarkably predictable. Seems to be a compulsion to work in every possible insult.

Like someone who says one thing, but four-and-a-half years later can't
get their Extra license (or even any ham license) out of the box?

> > Where's the support of "family values" if the simple fact of being
> > married means you pay more tax?

> Some say that is a bit of an attempt to get back to "one breadwinner"
> families.

I know a lot of families who would gladly go back to "one breadwinner"
- but they need the second income and benefits. Not want - need. This
need is driven by factors such as incomes not matching inflationary
rises, job insecurity, and the very real possibility of professional
obsolescence in a number of fields.

This last is a big one. Imagine someone in the health care field who
simply stopped working for 10 years - do you think they could reenter
their field without major retraining? In many computer jobs, 5 years
away makes you almost unemployable.

So the idea that Mom (or Dad) can simply stay home just doesn't apply
in many situations.

> > It goes far beyond the schools, though!

> Utopias work well in books!

Of course.

> Ayn was an interesting character.

I read an interesting bio of her. Her own life in some ways matched
that of her books and philosophy, but in other ways was exactly
the opposite.

> She had a
> number of good points and concepts, and her books conveyed them fairly
> well. Unfortunately, they always seemed to be "just so" scenarios to me,
> and a bit of Bravo Sierra was in them too.

The main problem with her books and philosophies is that they avoid large areas of "real life", making them inapplicable to most people's experience. For example, notice that in any Ayn Rand novel:

1) Most of the heroes have no family at all. Parents are usually long dead, no siblings, spouses or children exist. Not even extended family - they're completely alone in the world. (Roark, Wynand, Galt, D'Anconia, Wyatt, and many others fit this description). The very few exceptions (Danneskjold and his movie-star wife) have relationships which take up only a sentence or two in a thousand-page book. Note too how the books always *end* with the hero and heroine finally getting together.

2) Those characters who do have living relatives are *always* dragged down/hurt by them. Rearden, Dagny Taggart, Dominique Francon, even Peter Keating and Catherine (Toohey's niece) are used and abused by relatives.

IOW, *nobody* has a good family of *any* kind. Yet the heroes simply pop out of those absent or dysfunctional families.

3) The heroes don't take care of themselves in any apparent way (exercise, diet, sleep, avoiding tobacco, birth control, etc.) yet they never ever make a mistake, or get sick, hurt or pregnant.

4) People's physical appearance matches their internal philosphy. All it takes is a look for Dominique to know that Roark is the hunka-hunka burnin' architect who can deliver the design...

5) The USA exists almost independently of the rest of the world.

6) Nobody important does anything but work - all the time.

> > This same concept holds true for some (not all) religious ideologies.
> > After all, if everybody would just accept and practice Religion X,

> for religious reasons, often over something that happened thousands of
> years ago.

I disagree. None of the children I know have that level of hate in them. As the song in South Pacific says: "You've got to be carefully taught".

There *is*, however, a desire for simple solutions to complex
problems, and also a desire for simple heroes and bad guys. Or at
least someone to look down on:

http://www.ibras.dk/montypython/episode20.htm#13

It's also a lot easier to "just believe" than to look critically at
how things really work, and how they *should* work. This extends to
politics - look how long so many people accepted the idea of "royalty"
and "nobility" based solely
on inheritance, not merit. Heck, all sorts of strange ideas have been
widely
accepted as a basis for political systems:

http://www.mwscomp.com/movies/grail/grail-03.htm

> Who's traditional values? Pre-Columbian Indians revered the Berdache,
> and they often married.

Yep. Or consider that until relatively recently, an "engagement"
really meant the point where a couple announced their intention to
marry - at which time, they started cohabiting. (More than a third of
colonial-era brides were expecting on their wedding day). A wedding
just made it legally binding and community-sanctioned. Engagement
presents (like a ring) were done in part as compensation for perceived
"loss of value" if the engagement were broken.
>
> > And consider this: If we let same-sex marriages happen, those folks
> > will pay more tax!
>
> Maybe they are rich, so that would be bad! 8^)
>
Just think - we'd have to admit that "those people" work - and pay
taxes - and contribute to society - and vote - and don't want to
hide....

--

btw, remember the discussion about the electoral college? Turns out
we're not the only ones with such strange systems. Check out how
Parliament works, and the efforts to make it more representative:

> A friendly question, not a demand.

Blackguard: the scoundrel

Vox: as in voice of course

Deus: as in deus ex machina.

I am here to help though I am a scoundrel and paradox.

> "You shine out like a shaft of gold, when all else is darkness"

Eloquent. Thank you.

Blackguard Vox Deus

2724. Amateur Radio Newsline™ Report 1410 - August 20, 2004

Newsgroup: rec.radio.amateur.policy
Date: 2004-08-26 18:50:14 UTC
From: radionews@aol.com
Message-ID: <20040826145014.13624.00003332@mb-m12.aol.com>
Source record: 96450

Amateur Radio Newsline™ Report 1410 - August 20, 2004

Amateur Radio Newsline report number 1410 with a release date of
Friday,
August 20th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio is ready as Hurricane Charley
comes
ashore. Find out the details on Amateur Radio Newsline report number
1410 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO AND HURRICANE CHARLEY

Packing 145-mile per hour winds Hurricane Charley slammed into west-
central Florida, ravaging oceanfront homes and trailer parks, tearing
apart small planes and inundating the coast. More than a half million
customers were left without power or telephone service statewide.
Damage
was especially heavy in downtown Punta Gorda on Charlotte Harbor.
Warren Elly, W1GUD, is a Tampa based TV reporter sent to cover the
aftermath of Charley coming on shore:

--

Audio report only. Hear it in mp3 audio in the current newscast
posted
at http://www.arnewsline.org/quincy

--

Warren's report was filed early Monday the 16th. Since then
President
George Bush has declared some sections of Florida as a major disaster
area. His brother, Florida Governor Jeb Bush, projected damage from
Charley could exceed 15 billion dollars, but that estimate was
preliminary. (ARNewsline(tm))

**

RESCUE RADIO RULES: FCC CLARIFIES EMERGENCY DECLARATIONS

The FCC has issued what amounts to a white paper to clarify the
rules
hams must follow when providing communications during an emergency.

Amateur Radio Newsline's Mark Abramowicz, NT3V, is here to sort it all
out:

--

With the hurricane season upon us and wildfires and other severe weather
hitting various parts of the nation, the Federal Communications
Commission believes now is the time for a clarification on Emergency
Communications Declarations.

What is an Emergency Communications Declaration or ECD?

When a natural disaster or accident interrupts or disrupts normal
communications systems in a particular area, the FCC - at the request of
emergency management officials or an amateur radio operator acting on
behalf of emergency officials - issues an Emergency Communications
Declaration.

Essentially, the order defines special conditions and special rules to
be followed by amateur radio stations providing service during the
communications emergency in that particular area.

The FCC says occasionally, it receives requests for Emergency
Communications Declarations before a hurricane or tropical storm hits.
The FCC says such requests generally arrive anywhere from 24 to 72 hours
in advance of weather predictions citing potential damage to a
particular area.

But under Section 97.401(a), emergency communications before an event
CAN be established to meet essential needs of a community or to help
prepare relief activities. The commission acknowledges preparations to
meet a disaster may overload or damage normal communications systems so
it allows amateur stations to make emergency transmissions at any time
prior to or even during a disaster.

In essence, the FCC says there's no need for an ECD because the actual
event disrupting communications has not occurred.

So, the FCC says such declarations WILL NOT be issued until AFTER the
disaster disrupts normal communications in a geographic area subject to
FCC regulation.

Speaking of emergencies, it doesn't necessarily have to be a weather-related incident, as we found on September 11, 2001. It can also be a transportation accident such as a railroad incident or a fire or explosion.

Whatever the emergency, once communications are disrupted, the FCC says there are only two sources from which it will accept an application for an ECD. The first is an emergency management official responsible for communications in the affected area. The second is an amateur radio operator acting at the request of an emergency management official.

The FCC says such applications must contain very specific information such as:

- The date the event has taken place.
- The nature of the disaster.
- A description of the communications system disrupted and a contact person who can verify the damage.
- The geographic area affected - city, county, state or region.
- Listing of the VHF/UHF, MF or HF frequencies to be used during the emergency.
- An estimated time the disruption of normal communications is expected to last.

The FCC says an Emergency Communications Declaration will contain an expiration date. However, the commission says that date can be extended at the request of the emergency official or authorized party making the original request.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The FCC's Communications and Crisis Management Center is the place where Emergency Communications Declaration requests are sent. You can reach them by phone at 202-418-1122, that's 202-418-1122. FAX requests are handled at 202-418-2813, 202-418-2813. Or, you can make the filing by e-mail to comm(hyphen)ctr@fcc.gov. (ARNewsline (tm))

**

EMERGING TECHNOLOGY: AUTOMATING EMERGENCY ALERTS

A new technology soon to debut in 12 states will significantly extend Amber alerts, reaching cell phones, e-mail and handheld computers. It could also be used to transmit weather and terrorism alerts.

According to news reports the system uses a simple broadcast technology that takes the information from a Web portal and reconfigures it for different types of broadcast. By way of example, a state department of transportation might receive it in one format for its road signs and another for its information number.

More important, people with cell phones can sign up to receive Amber alerts with their local county or with state authorities. The text of an alert can be sent immediately to local TV news stations and Web sites.
(Science OnLine)

**

RADIO RULES: INTERNET LINKING IN THE UK

Telecommunications regulators are about to make ham radio internet linking a lot easier on the other side of the Atlantic. This, as Ofcom which is the U-K equivalent of our FCC issues new and more liberalized rules. RSGB news presenter Jeramy Boot, G4NJH, has more:

--

Ofcom has announced the decisions it has taken about changes to the procedure and terms of issuing Notices of Variation (NoV) for Internet Linking Gateways.

Ofcom proposes to pass the Internet-linking NoV process to the RSGB to issue NoVs on behalf of Ofcom. The RSGB will be announcing procedures for NoV renewal shortly and queries on the renewal process should be directed to the Society.

Ofcom's decisions were made following the notification of four proposals
which gave those holding an NoV the opportunity to make representations.

Jeramy Boot, G4NJH, in Nottingham.

--

For those interested the complete set of new U K Internet linking rules
is on line at http://tinyurl.com/4LE8P (GB2RS)

**

RADIO RULES: VANITY FEE REMINDER

Back here in the USA, a reminder from the FCC that the new Amateur Radio
vanity call sign fee of $20.80 for the 10-year license term became effective on Tuesday, August 10th. Not on Friday, August 6 as we and and others had announced.

The reason for the last minute change? A management-level staffer in the FCC's Office of Managing Director explained to the ARRL that the Commission was not necessarily bound by the August 6 effective date The
Federal Register indicates. That date was 30 days after publication of
the order containing the new fee schedule. (ARRL, FCC)

**

ENFORCEMENT: NO LICENSE - STAY OFF THE AIR

Meantime the FCC has written to a pair of unlicensed operators telling
them to stay off the air. The agency's Daryl Duckworth, NNZ0W, explains:

--

Duckworth: A warning notice went to Rick Shepherd of Crescent City, California for unlicensed operation on 146.515 MHz along the Oregon/California border aboard the fishing vessel Sunset.

David Shoemaker of Sebina, Ohio, also apparently not in the FCC Licensing Database was issued a warning notice for unlicensed operation
from a vehicle with license plates registered in his name. The transmissions were on 28.085 MHz near the intersection of I-71 and U.S.
36.

--

Shepherd and Shoemaker were both told that operation of radio transmitting equipment without a license is a violation of Section 301
of the Communications Act of 1934. They were also informed that continued operation could lead to fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment that they own.
Monetary forfeitures for unlicensed operation normally range from $7,500
to $10,000. (FCC, RAIN)

**

RADIO RULINGS: FCC PERMITS SAN JOSE STATION TO BUILD SAN FRANSCISCO TRANSMITTER

The San Franscisco Chronicle reports that thousands of people in and around San Francisco will be able to watch NBC television over the air
again. This, courtesy of a Federal Communications Commission ruling on
Thursday, August 12th, that will let KNTV build a new transmitter to cover the area.

According to the news story, the San Jose based station will be permitted to construct a new transmitter atop San Bruno Mountain which
overlooks San Francisco. The station claims this site will reach 400,000 people who lost service when KNTV became the Bay Area's NBC affiliate in 2001. (FCC, San Franscisco Chronicle and other published
news stories)

**

NAMES IN THE NEWS: ANOTHER OPERATION FROM IRAQ

Even as the military action in Iraq continues another ham radio stAtion
has come on the air from that war torn region. This, word that Ryszard
Nowakowski, SP8HKT has been licensed to operate as YI9KT.

Ryszard will be there for five months. He uses a 100 watt radio into a
vertical antenna on all bands from 40 to 10 meters. He operates mostly
on C-W but will come onto SSB if you make the request. (GB2RS)

**

NAMES IN THE NEWS: NEW QCWA OFFICERS ELECTED

Former FCC rules man John B. Johnston, W3BE, is the new President of the

Quarter Century Wireless Association. Also elected are Vice-
President
Bob Roske, NOUF: Secretary Alan Pickering, KJ9N and Treasurer Frank
Harris, WA4PAM

Elected to serve as QCWA Directors are Tom Atkins, VE3CDM: Harold
Chase,
W1EES: Lew Gordon, K4VX: Jerrel Jones, W5TUU; Ray Minichello, W1BC:
Len
Nathanson, W8RC: Blanche Randles, W4GXZ, and Ed Yoder W3YMB.

Both Gordon and Nathanson are former Directors of the ARRL. 2307
QCWA
members returned ballots in this years election. (QCWA)

**

EVENTS: 2004 QCWA NATIONAL CONVENTION IN OTTAWA

And speaking about the QCWA. word that the organization will hold its
2004 international convention in Canada. The dates are October 15th
through the 17th at the Lord Elgin Hotel in Ottawa.

This years gathering is hosted by the National Capital Chapter 70.
More
information is on line at www.qcwa.org/2004convention.htm (QCWA)

ON THE NET: LINUX CONTINUES TO GROW

The use of the Linux operating system especially among experimenters
including ham radio operators is quietly growing. One in five
servers
sold last year to handle Internet traffic and corporate networks ran
on
Linux.

Observers say that the economic downturn may be responsible for the
Linux move. The Linux operating system was created as the people's
software, free and open for everyone to use in an attempt to thwart
the
commercialization of all Internet technology. Amateur radio was

among
tgher first to truly embrace it and may ham radio applications are
written for Linux based operation. (Published news reports)

HAM RADIO IN SPACE: NASA CELEBRATES ISS AT MARINA AIR FAIRE

Scott Avery, WA6LIE, reports over the AMSAT mailing list that NASA
will
have a booth set up at the Marina Air Faire in Marina, California
on
October 16th. Scott says that the plan is to make a live I-S-S voice
contact and to also have a video of Q-S-O's made with the space
station
playing for passers by to see. Scott adds that any help in getting
video files of school contacts with the I-S-S would be appreciated.
For
more information please contact him by e-mail to wa6lie@msn.com
(WA6LIE)

WORLDBEAT: LIGHTHOUSES OF AUSTRALIA 2004 ANNUAL DINNER WEEKEND

Turning to news from around the world, word that this year's
Lighthouses
of Australia Dinner will be held in Launceston, Tasmania Saturday,
October 2nd. The dinner will include a tour to the National Archives
Office Exhibition on Australian Lighthouses titled "Beacons by the
Sea."
Also scheduled is a visit to the Low Head Light and the Pilot Station
Maritime Museum also at Low Head the same weekend. (WIA News)

**

WORLDBEAT: RADIO CLUB GETS GRANT TO TEACH THE HOBBY

The Thornton-Cleveleys Amateur Radio Society in the United Kingdom
has
recently received a grant of close to 5,000 British Pounds. This, to
help in the promotion of amateur radio. Over the past two and a half
years the club has held 18 examination classes with 150 passing the U-
K
Foundation class ham radio license exam. (GB2RS)

**

WORLDBEAT: GB4WTA COMMEMORATING THE UK WIRELESS TELEGRAPHY ACT

GB2RS reports that Ted Moore, G7AIR, and members of the Eddystone
Users
Group will operate as GB4WTA on Sundays and some Saturdays through
the

28th of August. The station commemorates the centenary of the United Kingdoms Wireless Telegraphy Act, which came into effect on the 15th of
August 1904. GB4WTA will operate from Wireless Hill in the Rutland area. (GB2RS)

**

DX

In D-X word that K4QD will be QRV August 16 to 27 portable HH4 from. This, from the Northwest Christian Mission in Haiti. Activity will be
on most H-F bands plus 6 meters, using CW and SSB as time permits. QSL
to his home call. (K5SW via VHF Reflector)

And GB6LOP is a special events station that will take to the air to celebrate the 60th Anniversary of the Liberation of Paris during Word War 2. The station will operate on all modes, starting August 25th and
will be on for 4 weeks. Your QSL card will be required beforehand in order to receive the special QSL from this station. Please QSL via RSARS
QSL Bureau. For further information contact G0SWY by e-mail to G0SWY@aol.com (G0SWY)

And also listen for HS7-B on from Thailand. This special event call sign has been issued to celebrate the Queen's 72nd birthday. The call sign will be in use during any SEA NET activities. QSL via operators' instructions. (RSGB)

**

THAT FINAL ITEM: THE BIG T-HUNT: HOW THE U.S. NAVY KEEPS TRACK OF EARTH
ORBITING SATELLITES

The U.S. Navy has built an exotic radar system to track earth orbiting
satellites, and the system has been in place for many years. Now, thanks to a couple of sleuths, details of the Navy's system have been posted on the web. Amateur Radio Newsline's Bruce Tennant, K6PZW, has
the details:

--

The Navy's satellite tracking system appears to consist of multiple transmit and receive sites across the U.S., and one of the receive sites
just happens to be located in San Diego County a few miles north of Brown Field. This, according to web-published coordinate data as

reported in the CGC Communicator broadcast industry newsletter.

And if think UHF moon bounce antennas have gain, wait until you see the
giant array built near Lake Kickapoo, Texas. This two mile long antenna
transmits continuously on 216.98 Mhz with an unmodulated carrier and has
a beamwidth of only 0.02 degrees in one plane. So powerful is the
transmitted signal that when the moon passes through the beam, the
return echo is said to be detectable on earth with only a dipole antenna
attached to a receiver. Talk about the ultimate E-M-E.

For the Amateur Radio Newsline, Im Bruice Tennant, K6PZW, in Los
Angeles.

--

If all this is fascinating and you want to learn more, take your web
browser over to:
http://www.gate.net/~tomk/navspasur/navspasur5.html
and
http://www.jump.net/~crossley/NAVSPASUR/index.html (CGC)

True. Not only that, so many abbreviations are used that it isn't
clear English at all. It's a kind of "baby talk."

Not only that, rampant hypocrisy as in "UR SIG 599 PSE RPT LAST"
sent when signal barely readable... :-)

Don't forget the "73" when the sender doesn't care spit about the
receiver...or the "88" when some lothario of the air wants to make

out with someone he thinks is female... :-)

NURSIE ask a no-brainer question.

Easy answer: Olde-Tyme Hammes at ARRL lobby for morsemanship,
get it. FCC not care much, takes easy way out and gives in to ARRL.

That was in the past (where "Quitefine" hangs out...).

Things are changing with more and more citizens able to lobby the
FCC without having to join special interest groups. Changes are
coming....

Will NURSIE be able to change with the times?

Will NURSIE be able to change anything...including uniforms? :-)

Will NURSIE ever get proper credentials as a homo sapiens?

Good thinking. Of course we are.

NURSIE not realize we use "simple spoken English" so that NURSIE
can understand words, not have to look up so many in dictionary...or
in federal regulations such as Department of Defense directives. :-)

We have to try to fit in to flow of conversation of some in here...
baby talk for baby minds.

Was that a good pacifier for you, NURSIE?

Mebbe NURSIE like dat. After so long refusing to eat crow (after being presented with sumptuous meals of it regularly), he might like something crunchee...maybe with a side of kimchee...? :-)

Tsk. "Quitefine" ought to jump in here and do Lecture thing...must be too busy with "affairs of state" like presidential politics, information infrastructure, national economy, space business, etc.

Das robust oberst is waiting in the wings, machine gun loaded with blanks...

NURSIE still in fantasyland giving his phantasms high-fives for "hitting nails on heads." NURSIE should have been at Golgotha..."Cross your legs, we have only three nails..." :-)

NURSIE angry and babbling again. Tsk.

> You're not a licensed Amateur Radio operator.

Never said I was.

I'm a licensed COMMERCIAL radio operator. :-)

Oh, I see your point...in order to GET INTO amateur radio, one has to be ALREADY IN IT!

Strange point...

> You are not a licensed Aviator.

Not necessary for amateur radio...

> You are not a licensed healthcare provider at ANY level.

Not necessary for amateur radio...

> You are not respected or trusted and that's YOUR doing.

From appearances in this newsgroup, some licensed amateurs are neither respected nor trusted... :-)

NURSIE is NOT knowledgeable about radio theory, an attribute considered good in amateur radio.

NURSIE has NO experience in any civil electronics engineering work.

NURSIE has NO experience background in military HF communications nor of civilian HF communications work.

NURSIE has NO qualifications in civilian interpersonal
interfacing skills, doesn't play well with others.

NURSIE has an obsessive compulsion to "always be right" and
will rationalize and misdirect far from any logical precept.

> It really is THAT simple.

NURSIE is as simple as they come... :-)

But Dave, we've got you running around here commenting on people's
roles in amateur radio. And we've got Quitefine trying so hard to
establish herself as having a role in amateur radio.

So what is Quitefine's role? Unless you're just here to give her a
pass.

And of course once most people are two income families, a family that
opts for one income is automatically docked a lot of money, so the sole
breadwinner better be making serious money - or look at living at
poverty level - in many cases with a college education.

I think that is the cute puppy effect. Why are puppies cute? Because
they have to be!

Children and adults are quite different creatures, As the human animal
matures, the hormonal changes create the new animal. Males become
aggressive, and females start to desire families and often become very
security conscious, as they want as secure a situation as possible to
raise their progeny in. The aggressive male is often selected as a mate
because in the short term, he will tend to provide protection.

You've heard the old story where women are claimed to want men to be
more sensitive and open, no doubt? In my experience, the sensitive and
caring men are "good friends", while the women marry and mate with that
bad old insensitive, mean lout.

And before anyone busts my chops here, there are exceptions. Plenty of
sensitive men get married, and plenty of women marry guys that are
sensitive. But the aggressive young man is pretty much the norm, and
the woman, who controls who she mates with (except in rare cases) must
be selecting that sort.

Don't upset yourself, Leonard. After all, you aren't involved in the use of morse code or in amateur radio itself.

> Don't forget the "73" when the sender doesn't care spit about the

Now you have a handle on the motivations of all radio amateurs. Chill out. You can take it a step at a time. Obtain a license first, then worry about what hams do on the air.

You've lobbied. I don't see any changes in your status vis a vis amateur radio. You're still not a participant after decades of self-declared interest. You're still not involved despite a boast of getting an "Extra right out of the box" years back. Some changes must come very slowly.

Most of your postings here do
not contain your real name, Len.

Just about four years ago,
you made a series of long
posts here as "averyfine".

Your name did not appear
in any of the posts. Not any
other means of identification.

Later, you claimed never to
have used the screen name
"averyfine" here. You were
very angry, nasty and abusive
when this untruth was pointed
out.

Now you behave the same way
towards some who simply wish

to be anonymous.

You aren't getting into amateur radio at all. You've had plenty of
time. You've posted here for nearly nine years, isn't it? You've not
taken the first step toward obtaining an amateur radio license of any
class.

You're all about reams of meaningless words.

You don't have me doing anything. I'm not running at all. I'm sitting
in a comfy chair. As to commenting on peoples' roles in amateur radio,
they first have to be radio amateurs in order to have a role. Len
doesn't have a role in amateur radio. Whether Leonard H. Anderson posts
here or doesn't post here, amateur radio goes on. Morse code goes on.
Chasing DX goes on.

> So what is Quitefine's role? Unless you're just here to give her a
> pass.

I'm not Quitefine. You have a bad habit of directing your questions to
the wrong people. You need to ask Quitefine. You may or may not get an
answer.

All kidding aside, "William", it is nearly 41 years that I've been
licensed as a radio amateur. I've made no empty brags about getting an
"Extra right out of the box". I just did it.

Smoke blowers need not apply.

You have the guts to write like this then suggest that I need help...?!?!

Like I said...You and Lennie are your own worst enemies.

Steve, K4YZ

But this is light hearted gibberish. Even those that think it is stupid
are not name calling. It's a good thing!

Remember? I am a scoundrel! But I take no refuge.

If I were the same sort as you, I could point out that your initials
could stand for Large Horses Ass.

But I'm not, so I won't point that out.

No, I am something for sure.

> But, you and this "Quitefine" deserve each other.
>
> Come to think of it, maybe you two are the SAME?

Ahh, yes! I may be Quitefine. I may be Jim, and I might even be
Lenover21! Only myself and the individuals in question know.

But no, I am

Blackguard Vox Deus

Poor NURSIE...never "peaked the grid and dipped the plate" like in the old days.

NURSIE spoiled by modern synthesized ham rigs...just dial in the frequency on the display and that's that. No final to tweak from the front panel, could have an automatic antenna tuner to do antenna matching without any manual controls (except to turn on the auto-tuning). That's called "operating" by those lazy PCTA extras...?

NURSIE doesn't want to hear it. He is upset, still angry, still hurting from long-past newsgroup "battles." Tsk, tsk.

NURSIE is big CAP air ace, a Dr. Strangelove at hospital ER, both vital attributes in amateur radio.

Now we have Quitebad and BVD as anonymous cretins lurking in the dark shadows. More good examples of modern U.S. amateur radio.
